REQUIRED ELECTIVE COURSES ....................................................................................................... 258
The aim of the University of Debrecen is to become a university of medical sciences committed to the prevention and restoration of health of the people, not only in its region but in the entire country.

In the past two decades both medical science and health care have entered a new era: the medical science of the 21st century. Molecular medicine is opening up and new possibilities are available for the diagnosis, prevention, prediction and treatment of the diseases. One can witness such a progress in medical sciences that has never been seen before. Modern attitudes in health care should be enforced in practice, including therapeutical approaches that consider the explanation and possible prevention of diseases, and attempt to comprehend and take the human personality into consideration. These approaches demand the application of the most modern techniques in all fields of the medical education.

All curricula wish to meet the challenges of modern times and they embody some very basic values. They are comprehensive; they take into consideration the whole human personality (body and soul) in its natural and social surroundings; and they are based upon the best European humanistic traditions. Moreover, all curricula prepare students for co-operation and teamwork.

With respect to education, both students and teachers are inspired to acquire higher levels of professionalism, precision, and problem solving skills, upon which the foundations of specialist training and independent medical practice can be built. This approach enables the assimilation of new scientific developments, facilitating further education and the continuous expansion of knowledge. The interplay of these factors ensures the ability to understand and handle the changing demands of health care.

With respect to research, the faculty members continuously acquire, internalize and subsume new knowledge, especially concerning the genesis, possible prevention and treatment of diseases. Moreover, new information aimed at improving, preserving and restoring the health of the society is also absorbed. The University of Debrecen is already internationally recognized in the fields of both basic and clinical research, and the clinicians and scientists of the University are determined to preserve this achievement. Special attention is given to facilitate and support the close co-operation of researchers representing basic science and clinical research, and/or interdisciplinary studies.

With respect to therapeutic practice, the main objective is to provide high quality, effective, up to date and much devoted health care to all members of the society, showing an example for other medical institutions in Hungary. One of the primary tasks is to continuously improve the actual standards of the diagnostic and therapeutic procedures and techniques, and to establish regional or even nationwide protocols.

With respect to serving the community, all faculty members wish to play a central role in shaping the policies of the health service; both within the region and in Hungary. They also want to ensure that sufficient number of medical doctors, dentists and other health care experts with university education is provided for the society.

With respect to the development, all employees strive for reinforcing those features and skills of the lecturers, scientists, medical doctors, health care professionals, collaborators and students which are of vital importance in meeting the challenges of medical education, research and therapy of the 21st century. These include humanity, empathy, social sensitivity, team-spirit, creativity, professionalism, independence, critical and innovative thinking, co-operation and management.

The organizational structure, including the multi-faculty construction of the institution, is a constantly improving, colorful educational environment, in which co-operation is manifest between the individual faculties and colleges, the various postgraduate programs as well as the molecular-
CHAPTER 1

and medical biology educations.

HIGHER EDUCATION IN DEBRECEN
A Brief History
1235: First reference to the town of Debrecen in ancient charters.
1538: Establishment of the “College of Reformed Church” in Debrecen.
1567: Higher education begins in the College.
1693: Declaration of Debrecen as a “free royal town”.
1849: Debrecen serves as the capital of Hungary for 4 months.
1912: Establishment of the State University of Debrecen comprising the Faculties of Arts, Law, Medicine and Theology.
1918: Inauguration of the Main Building of the Medical Faculty by King Charles IV of Hungary.
1921: The Medical Faculty becomes operational.
1932: Completion of buildings of the campus.
1944: Although during the Second World War, Debrecen became the capital of Hungary again (for 100 days), the University itself is abandoned for a while.
1949: The only year when the University has five faculties.
1950: The Faculty of Law idles; the Faculty of Science is established.
1951: The University is split up into three independent organizations: Academy of Theology, Medical School, Lajos Kossuth University of Arts and Sciences.
1991: The “Debrecen Universitas Association” is established.
1998: The “Federation of Debrecen Universities” is founded.
2000: The federation is transformed into the unified “University of Debrecen” with all the relevant faculties and with some 20,000 students.

Debrecen is the traditional economic and cultural center of Eastern Hungary. In the 16th century Debrecen became the center of the Reformed Church in Hungary and later it was referred to as the "Calvinist Rome". The 17th century was regarded as the golden age of the city because Debrecen became the mediator between the three parts of Hungary: the part under Turkish occupation, the Kingdom of Hungary and the Principality of Transylvania. For short periods of time, Debrecen served twice as the capital of Hungary. Nowadays, with its population of approximately a quarter of a million, it is the second largest city in Hungary.

Debrecen is a unique city: although it has no mountains and rivers, its natural environment is rather interesting. One of the main attractions and places of natural uniqueness in Hungary is Hortobágy National Park, known as “puszta” (“plain”), which begins just in the outskirts of Debrecen. This is the authentic Hungarian Plain without any notable elevations, with unique flora and fauna, natural phenomena (e.g. the Fata Morgana), and ancient animal husbandry traditions. The region is unmatched in Europe, no matter whether one considers its natural endowments or its historic and ethnographic traditions. A very lovely part of Debrecen is the “Nagyerdő” (“The Great Forest”), which is a popular holiday resort. Besides a number of cultural and tourist establishments, luxurious thermal baths and spas, Nagyerdő accommodates the University campus too.

The history of higher education in Debrecen goes back to the 16th century when the College of the Reformed Church was established. The University Medical School of Debrecen has its roots in this spiritual heritage. It was in the year of the millennium of the establishment of Hungary (1896) when the foundation of the present University was decided. The University of Debrecen was established in 1912, initially having four faculties (Faculties of Arts, Law, Medicine and Theology). The University was officially inaugurated by King Charles IV of Hungary on October 23rd, 1918. The educational activity at the University started in 1924, although the construction of the whole University was completed only in 1932. In 1951 the Faculty of Medicine became a self-contained,
INTRODUCTION

independent Medical University for training medical doctors. The special training of dentists began in 1976. As a further development the University Medical School established the Health College of Nyíregyháza in 1991. In 1993, as part of a nationwide program, the University was given the rights to issue scientific qualifications and new Ph.D. programs were also launched. Several new programs (e.g. the training of molecular biologists, pharmacists, general practitioners) were commenced in the '90s. The Faculty of Public Health was established in 1999, while the Faculty of Dentistry was founded in 2000. The Faculty of Medicine celebrated the 90th anniversary of its foundation in October 2008 with a highly successful international scientific conference.

Education at the University of Debrecen

Debrecen, the second largest city of Hungary, is situated in Eastern Hungary. Students enrolled in the various programs (e.g. Medicine, Dentistry, Pharmacy, Public Health, Molecular Biology, etc.) study on a beautiful campus situated in the area called “Great Forest”.

The Hungarian Government gives major priorities to the higher education of health sciences in its higher education policy. One of these priorities is to increase the ratio of college level training forms within the Hungarian higher education system. The governmental policy wishes to implement conditions in which the whole health science education system is built vertically from the lowest (post-secondary or certificate) to the highest (PhD-training) levels. In fact, this governmental policy was the reason behind the establishment of the new Health Science Education Center within the Federation of Debrecen Universities (DESZ), based partially on the intellectual resources of the University of Debrecen. The new programs – with specialized training for paramedics – will help to correct the balance of the Hungarian labor-market that became rather unsettled in the past few decades.

The Act of Higher Education (1993) has restored the rights of the medical universities to award postgraduate degrees and residency, and permission was also given to license Physicians’ procedures. This kind of training required a new structure, a new administrative apparatus, and a suitable training center. The new residency programs were commenced in 1999.

The introduction of the credit system, starting in September 2003, has been mandatory in every Hungarian university, helping the quantitative and qualitative evaluation of the students’ achievements. Admission requirements for Hungarian students are defined at national level, and they are applicable for every student wishing to be enrolled into the Medicine or Dentistry programs.

International students must pass an entrance exam in biology and (depending on their preference) in physics or chemistry. In some special cases it may be possible for the candidates to apply for transfer to higher years on the basis of their previous studies and achievements. International students study in English language. Entrance for certain courses of the Health College is also possible on the basis of a special evaluation (scoring) and an entrance interview.

The syllabuses and classes of all courses correspond to European standards. The total number of contact hours in medical education is over 5,500, which can be divided into three main parts: basic theoretical training (1st and 2nd year), pre-clinical subjects (3rd year) and clinical subjects (4th and 5th year) followed by the internship (6th year). The proportion of the theoretical and practical classes is 30% to 70%; whereas the students/instructors ratio is about 8/1. The first two years of dentistry education are similar to the medicine program, but the former contains a basic dental training that is followed by a three-year-long pre-clinical and clinical training. Besides the medicine and dentistry programs, there are several other courses also available, including molecular biology. The various Health College courses include more and more new curricula.

The Medicine program delivered in English and intended for international students was commenced in 1987; whereas the Dentistry and Pharmacy programs for international students started in 2000.
and 2004, respectively. The curriculum of the English language Medicine program meets all the requirements prescribed by the European medical curriculum, which was outlined in 1993 by the Association of Medical Schools in Europe. Compared to the Hungarian program, the most important differences are:

- Hungarian language is taught,
- More emphasis is laid upon the tropical infectious diseases (as parts of the “Internal Medicine” and “Hygiene and Epidemiology” courses).

Otherwise, the English language curriculum is identical with the Hungarian one. The 6th year of the curriculum is the internship that includes Internal Medicine, Pediatrics, Surgery, Obstetrics and Gynecology, Neurology, and Psychiatry. The completion of these subjects takes at least 47 weeks, although students are allowed to finish them within a 24-month-long period. The successfully completed internship is followed by the Hungarian National Board Examination. Just like the rest of the courses, the internship is also identical in the Hungarian and English programs.

A one-year-long premedical (Basic Medicine) course, which serves as a foundation year, is recommended for those applicants who do not possess sufficient knowledge in Biology, Physics and Chemistry after finishing high school.

After graduation, several interesting topics are offered for PhD training, which lasts for three years. If interested, outstanding graduates of the English General Medicine and Dentistry programs may join these PhD courses (“English PhD-program”). Special education for general practitioners has been recently started and a new system is in preparation now for the training of licensed physicians in Debrecen.

The accredited PhD programs include the following topics:
- Molecular and Cell Biology; Mechanisms of Signal Transduction
- Microbiology and Pharmacology
- Biophysics
- Physiology-Neurobiology
- Experimental and Clinical Investigations in Hematology and Hemostasis
- Epidemiological and Clinical Epidemiological Studies
- Cellular- and Molecular Biology: Study of the Activity of Cells and Tissues under Healthy and Pathological Conditions
- Immunology
- Experimental and Clinical Oncology
- Public Health
- Preventive Medicine
- Dental Research

The PhD-programs are led by more than 100 accredited, highly qualified coordinators and tutors.

Medical Activity at the Faculty of Medicine
The Faculty of Medicine is not only the second largest medical school in Hungary, but it is also one of the largest Hungarian hospitals, consisting of 49 departments; including 18 different clinical departments with more than 1,800 beds. It is not only the best-equipped institution in the area but it also represents the most important health care facility for the day-to-day medical care in its region. The Kenézy Gyula County Hospital (with some 1,400 beds) is strongly affiliated with the University of Debrecen and plays an important role in teaching the practical aspects of medicine. There are also close contacts between the University and other health care institutions, mainly (but not exclusively) in its closer region. The University of Debrecen has a Teaching Hospital Network consisting of 24 hospitals in Israel, Japan and South Korea.
It is also of importance that the University of Debrecen has a particularly fruitful collaboration with the Nuclear Research Institute of the Hungarian Academy of Sciences in Debrecen, allowing the coordination of all activities that involve the use of their cyclotron in conjunction with various diagnostic and therapeutic procedures (e.g. Positron Emission Tomography 'PET').

Scientific Research at the Faculty of Medicine
Scientific research is performed both at the departments for basic sciences and at the laboratories of clinical departments. The faculty members publish about 600 scientific papers every year in international scientific journals. According to the scientometric data, the Faculty is among the 4 best of the more than 80 Hungarian research institutions and universities. Lots of scientists reach international recognition, exploiting the possibilities provided by local, national and international collaborations. Internationally acknowledged research areas are Biophysics, Biochemistry, Cell Biology, Immunology, Experimental and Clinical Oncology, Hematology, Neurobiology, Molecular Biology, Neurology, and Physiology. The scientific exchange program involves numerous foreign universities and a large proportion of the faculty members are actively involved in programs that absorb foreign connections (the most important international collaborators are from Belgium, France, Germany, Italy, Japan, the UK and the USA).
CHAPTER 2
PHARMACIST-TRAINING AT THE UNIVERSITY OF DEBRECEN

Pharmacist-training at the University of Debrecen

The establishment of the Faculty of Pharmacy at the University of Debrecen serves continuous development, change, renewal, and also reputation and prestige both nationally and internationally. At the University of Debrecen the organization and formation of pharmacist-training was started by Professor Géza Mezey in 1995, as a result of which in 1996 the teaching of the first year was launched in the field of pharmacist-training at the those days separately functioning Lajos Kossuth University of Sciences and Debrecen University of Medical Sciences. For the establishment and building of the Institute of Pharmaceutical Sciences (2001) the outstanding cooperation, effort, compromise approach, and continuous support of the management of the former Debrecen University of Medical Sciences and Lajos Kossuth University of Sciences were inevitable. Without these and the active assistance and collaboration of the colleagues and the university’s management, the Faculty of Pharmacy could not have been in its current form and developed for the 100th year jubilee anniversary of establishment of the University of Debrecen. The coordination and improvement of the pharmacist-training was further concentrated into the hands of Professor Géza Mezey, the director of the Institute of Pharmaceutical Sciences (2001), until his death (17 October, 2001).

The main building of the present Faculty of Pharmacy, where the Center’s Pharmacy and the Dean’s Office had been placed, was handed over in 2001 and the new building fully satisfies in every way the widespread supply of medicinal products towards the departments of the University of Debrecen and meets the requirements of pharmacist-training according to the standards of the European Union. Without the previous and present management of the University, the devoted help and cooperation of the departments belonging to the Faculty of General Medicine and the former Faculty of Natural Sciences at Lajos Kossuth University of Sciences where the acquisition of the basic subjects of Chemistry and Biology is ensured for the students of Pharmacy, the pharmacist-training would not have become possible at the University of Debrecen. The Hungarian anthem was first played in 2001 as this was the first year when pharmacist degrees were awarded at the ceremonial council meeting of the University of Debrecen. With the support and guidance of the management of that time and of the president of the Medical and Health Science Center, the draft for the accreditation of the Institute of Pharmaceutical Sciences to become a faculty was prepared. In 2003 it was approved by the Hungarian Accreditation Committee and from this year on the Faculty of Pharmacy started to operate as a separate organizational unit at the University of Debrecen, as its eleventh faculty. One of the fundamental prerequisites for the Institute of Pharmaceutical Sciences to become a faculty was to establish at least five independent departments. The University fulfilled this basic requirement by the founding of the Department of Pharmaceutical Technology (1996), Pharmacology (1998), Pharmaceutical Management and Organization (1999), Biopharmacy (2000), Pharmaceutical Chemistry (2001), Clinical Pharmacology (2001), and thus increased the number of its departments to six. In 2011 the number of departments at the Faculty of Pharmacy increased again as TEVA and the University of Debrecen Medical and Health Science Center’s Faculty of Pharmacy founded the “of Industrial Pharmaceutics” that strengthens the practical education for the students during the training of pharmacist doctors.

The Faculty of Pharmacy successfully joined the University’s Ph.D. training within the framework of the scheduled programs of the doctorate schools.

After successfully turning into faculty, we prepared the thematics of the English language pharmacist-training, and successfully launched the English language training (2004) for the foreign
students of Pharmacy – which has already had considerable traditions at the fields of medical doctor
and dentist training at the University of Debrecen. There are more and more foreign students
applying for the English language program, at present the number per year exceeds 25 persons.
Being grateful for the efforts of Professor Géza Mezey, the Faculty commemorates him with honor
through the Dr. Géza Mezey Foundation named after him. The Advisory Board of the Géza Mezey
Foundation and the Dean of the University of Debrecen’s Faculty of Pharmacy have been awarding
commemorative medals each year since 2003 for outstanding scholastic records, outstanding
contributions to the student scientific society, and also as the acknowledgment of effective
education.

CHAPTER 12

ACADEMIC PROGRAM FOR THE BASIC MEDICINE COURSE

Basic Medicine Course (BMC, Premedical Studies)
Duration of studies: 1 year (2 semesters)

The one-year premedical Basic Medicine Course is recommended to those students who do not have sufficient knowledge in Biology, Physics and Chemistry from high school. The requirements in these premedical science subjects are rigorous, thus it is recommended that students who need a period of preparation prior to beginning the General Medicine, Dentistry or Pharmacy Program join the Basic Medicine Course. Students successfully completing the course are directly admitted to their chosen program. In addition to the Basic Medicine Course starting each September, our University launches an Intensive BMC in January as well.

Class Behavior

Students must not use cell phones to talk or text during class. Cell phones must be switched off or kept in silence mode during class. In seminars, students will be expected to participate in seminar discussions. Students are encouraged to ask questions related to the topic of the lectures discussed, and participate in solving problems related to the topic of the seminar. Some professors will ask for students to volunteer information, but some professors call on students randomly. It is, thus, a good idea to come to class prepared so as not to be embarrassed in front of the class. Students should not disrupt the class by talking to each other. If one continues to disrupt the class, the student may be asked to leave. The usage of electronic devices, textbooks and any form of interaction between students during the tests is strictly forbidden. Electronic devices (cell phones, tablets, dictionaries, etc.), except for approved simple calculators, must not be within the reach (in pocket, in the desk, etc.) of students during tests. It is the students' responsibility to stow these items before the test begins without specific warning by the supervising teachers. Violation of these above mentioned regulations results in an immediate and unconditional dismissal from the program.

Requirements

The 2-semester course consists of lectures and seminars. Attending lectures is strongly recommended, attendance of seminars is compulsory and recorded. Everyone must attend the seminars with the group designated by the Registrar's Office.

Absence can significantly affect your understanding and can have serious implications of progression in your studies. One might have a maximum of three seminar absences per semester to have the opportunity to get exemption. Students missing 4 seminars per semester cannot be exempted from the End of Semester Examination (ESE) or Final Examination (FE), regardless of their score reached on the Self Control Tests. Students missing 5 or more seminars per semester are dismissed from the course. Missed seminars cannot be made up, unless one obtains prior permission to be absent.

The knowledge of students will be tested 4 times during each semester using a written test system by Self Control Tests (SCT). The first semester is ended with an End of Semester Examination (ESE) covering the topics of all lectures and seminars of the first semester. Three dates will be set for the ESE during the winter examination period. Unsuccessful students may repeat the ESE twice (B and C chances). Non-repeater students who fail even the 3rd ESE (C chance) may continue their study in the second semester however they lose their chance to be exempted from the final examination and to receive bonus points. Exam exemption and bonus point
policy is used to improve the students’ performance on SCTs. Exact details of these policies will be described below. To be eligible for bonus points, students must either get exemption from the ESE or pass it with a score of at least 45%. Students repeating the course must successfully pass the first semester either with exemption or at least with a score of 45% of ESE, otherwise their studies will be terminated. It is not compulsory to take the ESE, if one gets exemption under the following circumstances:
- one’s average score of the three best first semester SCTs is at least 50%, AND
- (s)he successfully completed all the SCTs at least with 30% score, AND
- (s)he has a maximum of 3 seminar absences for each subject in the first semester.

The course ends with a **Final Exam (FE)** covering the whole material of the first and second semesters. A minimum of four FE dates will be set during the summer examination period. Unsuccessful students may repeat the FE twice (B and C chances, and the latter ends up with an oral examination part). Exemption from FE is offered for students who achieve excellent academic performance during their studies on the following base:
- the average score of the six best SCTs (out of 8) of the two semesters is at least 50%, AND
- passed all the SCTs with at least 30%, AND
- (s)he has a maximum of 3 seminar absences for a given subject per semester.

OR
- the average of the ESE score taken 3 times plus the scores of the 3 best SCTs in the 2nd semester is at least 50%, AND
- passed all the SCTs with at least 30%, AND
- (s)he has a maximum of 3 seminar absences for each subject per semester.

Bonus points will be added to the FE score (in %) of eligible students and calculated as follows:

<table>
<thead>
<tr>
<th>The average of the ESE score three times and the best 3 2nd semester SCTs</th>
<th>Bonus points</th>
</tr>
</thead>
<tbody>
<tr>
<td>46</td>
<td>1</td>
</tr>
<tr>
<td>47</td>
<td>3</td>
</tr>
<tr>
<td>48</td>
<td>5</td>
</tr>
<tr>
<td>49</td>
<td>7</td>
</tr>
</tbody>
</table>

Students who could not meet the above described conditions for exemption during the two semesters must sit for the FE from the whole material of the first and second semesters. The participation shall be preceded by ID confirmation (i.e. student’s card, passport or driving license) before all forms of tests.

Self Control Tests, End of Semester Exams, and Final Exams will be assessed as follows.

<table>
<thead>
<tr>
<th>Percentage (%)</th>
<th>Mark</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - 44.99:</td>
<td>fail (1)</td>
</tr>
<tr>

CHAPTER 13

ACADEMIC PROGRAM FOR THE SHORT BASIC MEDICINE COURSE

Intensive Basic Medicine Course (Intensive BMC, Premedical Studies)
Duration of studies: 1 semester

The six-month intensive premedical Basic Medicine Course is recommended to those students who do not have thorough knowledge in Biology, Physics and Chemistry from high school. The requirements of these condensed premedical science subjects are very rigorous, thus preparation prior to the beginning the General Medicine, Dentistry or Pharmacy Program is recommended. Students successfully completing the course are directly admitted to their chosen program. The Intensive Basic Medicine Course starts in January.

Class Behavior

Students should not use cell phones to talk or text during class. Cell phones must be switched off or kept in silence mode during class. In seminars, students will be expected to participate in seminar discussions. Students are encouraged to ask questions related to the topic of the lectures discussed, and participate in solving problems related to the topic of the seminar. Some professors will ask for students to volunteer information, but some professors call on students randomly. It is, thus, a good idea to come to class prepared so as not to be embarrassed in front of the class. Students should not disrupt the class by talking to each other. If one continues to disrupt the class, the student may be asked to leave. The usage of electronic devices, textbooks and any form of interaction between students during the tests is strictly forbidden. Electronic devices (cell phones, tablets, dictionaries, etc.), except for approved simple calculators, must not be within the reach (in pocket, in the desk, etc.) of students during tests. It is the students' responsibility to stow these items before the test begins without specific warning by the supervising teachers. Violation of these above mentioned regulations results in an immediate and unconditional dismissal from the program.

Requirements

The course consists of lectures and seminars. Attending lectures is strongly recommended, attendance of seminars is compulsory and recorded. Everyone must attend the seminars with the group designated by the Registrar's Office.

Absence can significantly affect your understanding and can have serious implications for progression in your studies. One might have a maximum of six seminar absences to have the opportunity to get exemption. Students missing 7-8 seminars cannot be exempted from the Final Examination (FE), regardless of their score reached on the Self Control Tests. Students omitting 9 or more seminars are dismissed from the course. Missed seminars cannot be made up unless one obtains prior permission to be absent.

The knowledge of the students will be tested 6 times during the entire course using a written test system by Self Control Tests (SCT). The course ends with a Final Exam (FE) from the whole material of the course and a minimum of four FE dates will be set during the summer examination period. Unsuccessful students may repeat the FE twice (B and C chances, and the latter ends up with an oral examination part). Exam exemption and bonus point policy are used to improve the students’ performance on SCTs. Exact details of these policies will be described below.

Exemption from FE is offered for students who achieve excellent academic performance during their studies under the following circumstances:
- the average score of the five best SCTs (out of 6) is at least 50%, AND
- passed all the SCTs with at least 30%, AND
- (s)he has a maximum of 6 seminar absences for a given subject.

Bonus points will be added to the FE score of eligible students and calculated as follows:

<table>
<thead>
<tr>
<th>The average of the best 5 SCTs</th>
<th>Bonus points</th>
</tr>
</thead>
<tbody>
<tr>
<td>46</td>
<td>1</td>
</tr>
<tr>
<td>47</td>
<td>3</td>
</tr>
<tr>
<td>48</td>
<td>5</td>
</tr>
<tr>
<td>49</td>
<td>7</td>
</tr>
</tbody>
</table>

Students who could not meet the above described conditions for exemption must sit for the FE from the whole material of the course.
The participation shall be preceded by ID confirmation (i.e. student’s card, passport or driving license) before all forms of tests. Self Control Tests, End of Semester Exams, and Final Exams will be assessed as follows.

Percentage (%) | Mark                
----------------|---------------------
0 - 44.99:      | fail (1)            
45.00 - 64.99:  | pass (2)            
65.00 - 74.99:  | satisfactory (3)    
75.00 - 84.99:  | good (4)            
85.00 - 100:    | excellent (5)       

Absence for any reason counts as 0%.

14th week:
Lecture: Tissues, organs and organ systems

15th week:
Lecture: Physiology, Homeostasis and Temperature Regulation
Blood, a fluid tissue.

16th week:
Lecture: Circulatory systems
The human circulatory system.

17th week:
Lecture: The human circulatory system.
Immunology: gene expression and natural defenses.
Self Control Test

18th week:
Lecture: Immunology: gene expression and natural defenses.
Nutrition, Digestion and Absorption.

19th week:
Lecture: Energy balance, vitamins and minerals
Gas exchange in Animals.

20th week:
Lecture: Salt and Water Balance Nitrogen Excretion.
Hormones

21st week:
Lecture: Neurons and Nervous system.
Self Control Test

22nd week:
Lecture: Neurons and Nervous system.
Sensory systems
CHAPTER 13

23rd week:
Lecture: Effectors: How animals get things done.

24th week:
Lecture: Animal reproduction and Animal Development
The human reproduction system.
Self Control Test

Academic advisors: Dr. András Penyige, Department of Human Genetics
Dr. Norbert Szentandrássy, Department of Physiology

Subject: INTRODUCTION TO BIOPHYSICS
Year, Semester: Intensive Basic Medicine Course
Number of teaching hours:
Lecture: 96
Seminar: 144

1st week:

2nd week:

3rd week:

4th week:

5th week:

6th week:

7th week:

8th week:

9th week:
10th week:

11th week:

12th week:

13th week:
Lecture: 25. Doppler effect. The ear and the principles of hearing.

14th week:

15th week:

16th week:

17th week:

18th week:

19th week:

20th week:

21st week:

22nd week:

23rd week:
Lecture: 44-45. Wave optics. Conditions for interference, polarization of light. Diffraction. The camera, the simple magnifier, the compound microscope, the telescope and the
### CHAPTER 13

#### 24th week:

Academic advisor: Dr. Attila Jenei, Department of Biophysics and Cell Biology
Recommended book: Serway, Vuille: College Physics (9th edition)

#### 1st week:

#### 2nd week:

#### 3rd week:

#### 4th week:
**Lecture:** 7-8. The sizes of atoms and ions. Ionization energy, electron affinity. Self Control Test (1st SCT)

#### 5th week:

#### 6th week:

#### 7th week:

#### 8th week:

#### 9th week:
**Lecture:** 17-18. Chemical equilibrium. The equilibrium constant. Factors that alter the composition of an equilibrium mixture. Self Control Test (2nd SCT)
10th week:

11th week:

12th week:
**Lecture:** 23-24. Discussion of general chemistry 2. Self Control Test (3rd SCT)

13th week:

14th week:

15th week:
**Lecture:** 29-30. Aromatic compounds: the structure and properties of benzene. The reactions of benzene. Heteroaromatic compounds.

16th week:
**Lecture:** 31-32. Organic halogen compounds. Alcohols and phenols.

17th week:
**Lecture:** 33-34. Ethers and organic sulfur compounds. Self Control Test (4th SCT)

18th week:

19th week:

20th week:
**Lecture:** 39-40. Carboxylic acids: classification and nomenclature. Self Control Test (5th SCT)

21st week:

22nd week:
**Lecture:** 43-44. Salts and detergents. Substituted carboxylic acids: halo acids, hydroxy acids, keto acids, amino acids. Stereochemistry. Types of isomerism.

23rd week:

24th week:
**Lecture:** Self Control Test (6th SCT). Summary and discussion

Academic Advisor: Dr. Éva Bakó, Department of Medical Chemistry
Recommended books: McMurry, Fay: Chemistry (7th edition)
Erdődi, Csortos: Organic chemistry for premedical students (2010)
CHAPTER 14

ACADEMIC PROGRAM FOR CREDIT SYSTEM

ACADEMIC PROGRAM FOR CREDIT SYSTEM

The introduction of the credit system became compulsory in every Hungarian university, including the University of Debrecen by September, 2003. The aim of the credit system is to ensure that the students' achievements can be properly and objectively evaluated both quantitatively and qualitatively.

A credit is a relative index of cumulative work invested in a compulsory, a required elective or a freely chosen subject listed in the curriculum. The credit value of a course is based upon the number of lectures, seminars and practical classes of the given subject that should be attended or participated in (so called "contact hours"), and upon the amount of work required for studying and preparing for the examination(s). Together with the credit(s) assigned to a particular subject (quantitative index), students are given grades (qualitative index) on passing an exam/course/class. The credit system that has been introduced in Hungary meets the standards of the European Credit Transfer System (ECTS). The introduction of the ECTS promotes student mobility, facilitates more effective organization of students' exchange programs aimed at further education in foreign institutions, and allows recognition of the students' work, studies and achievements completed in various foreign departments by the mother institution. Credit-based training is flexible. It provides a wider range of choice, enables the students to make progress at an individual pace, and it also offers students a chance to study the compulsory or required subjects at a different university, even abroad. Owing to the flexible credit accumulation system, the term "repetition of a year" does not make sense any longer. It should be noted, however, that students do not enjoy perfect freedom in the credit system either, as the system does not allow students to randomly include subjects in their curriculum or mix modules. Since knowledge is based on previous studies, it is imperative that the departments clearly and thoroughly lay down the requirements to be met before students start studying a subject.

The general principles of the credit system are the following:

1. Students can be given their degree if, having met other criteria as well, they have collected 300 credits during their studies. Considering the recommended curriculum, this can be achieved in five years.

2. According to the credit regulations, students should obtain an average of 30 credits in each semester.

3. The criterion of obtaining 1 credit is to spend 30 hours (including both contact and non-contact hours) studying the given subject.

4. Credit(s) can only be obtained if students pass the exam of the given subject.

5. Students accumulate the required amount of credits by passing exams on compulsory, required elective and freely chosen subjects. Completion of every single compulsory credit course is one of the essential prerequisites of getting a degree. Courses belonging to the required elective courses are closely related to the basic subjects, but the information provided here is more detailed, and includes material not dealt with in the frame of the compulsory courses. Students do not need to
take all required elective courses, but they should select some of them wisely to accumulate the predetermined amount of credits from this pool. Finally, a certain amount of credits should be obtained by selecting from the freely chosen courses, which are usually not related to the basic (and thus mandatory) subjects, but they offer a different type of knowledge.

6. 80, 15 and 5 percent of the total of 300 credits should be accumulated by completing the compulsory, required elective and freely chosen courses, respectively.

7. According to the qualification requirements, professional (compulsory and required elective) courses fall into three modules. The basic module provides the theoretical basis of medicine, and ensures that the necessary practical skills are developed. The preclinical module lays down the foundations of clinical knowledge, while in the clinical module the students are taught clinical medicine, and they attend practical classes to ensure proper command of the medical procedures. The credits accumulated in the different modules for compulsory and required courses should show the following distribution: basic module: 110-116, preclinical module: 50-58, and clinical module: 150-170 credits.

8. The pilot curricula show the recommended pacing of compulsory courses. If these courses are carefully supplemented with credits obtained from the necessary number of required elective and freely chosen courses, students can successfully accumulate the credits required for their degree within 10 semesters.

9. In the case of two-semester subjects, when students have to pass a final exam, they get higher credits in the semester of the final examination since preparation for a final examination takes up more non-contact hours from the students' time.

10. There are 12 compulsory final examinations in the curriculum; therefore one final exam is worth at least 10 credits.

11. The diploma work is worth 10 credits.

12. Regulations concerning the training of students in the credit system prescribe a minimum amount of credits for certain periods as outlined in the Rules and Regulations for English Program Students.

13. Although Physical Education and Summer Internship are not recognized by credits, they have to be completed to get the final degree (see the rules outlined in the Information section about the conditions).

14. Evaluation of the students' achievements needed for grants or applications is described in Rules and Regulations for English Program Students.

15. Further information is available in the Rules and Regulations for English Program Students.

We very much hope that the system of training will contribute to the successful completion of your studies.

We wish you good luck with your university studies.
This model curriculum applies to those who started their studies on Pharmacy Program in the academic year 2017-18.

For the previous years’ curriculum please visit the university website: www.edu.unideb.hu

Public Pharmacy Practice after 3rd year

Syllabus for the practice in a public pharmacy after third year

Duration of practice:
4 weeks, 8 hours daily, from which 2 hours may be spent preparing individually
The student is required to gain proficiency in the following areas during his /her practice at a public pharmacy, and subsequently acquire knowledge about pharmacy operation including dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Main requirements for the student:
Before practice he/she should accept and sign the non-disclosure document.
Absence from practice must be authentically justified based on the rules of the place of training.
Absences must be made up.
He/she is expected to follow the guidance of the pharmacist in charge of the training.

Skills expected from the student after the completion of practice:
• practical application of the theoretical knowledge obtained during his / her studies
• he / she is expected to know the premises and the assets of the public pharmacy and be able to get information from manuals and scientific journals used during his / her work
• he / she is expected to learn about the work activities of a public pharmacy
• he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
• he / she is expected to know the rules and regulations pertaining to the operation of pharmacies
• he/ she is required to explore the possibilities of communicating with patients

The student’s tasks during the practice:

Under the supervision of the pharmacist in charge of the training he / she participates in the following activities:

1. Preparation of medicine. In the process he / she is required to learn:
   • How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
   • The legal possibilities of changing the original prescription
   • The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
   • Documentation of preparation, and administrative obligations
   • Storage of materials, processing of basic formulations and subsequent administrative obligations
   • Formulations of the compendium and FoNo
2. Operation and quality assurance. In the process he/she is required to learn for the basic knowledgements:
   - administrative work in the pharmacy
   - standard procedures for workflow
   - how to check and document workflow
   - the rules pertaining to the examining and sampling incoming medications, documentation of examinations

3. Drug dispense. In the process he/she is required to learn for the basic knowledgements:
   - how to check the content and layout of the prescription
   - the database of nutrition complements and medicinal formula
   - adequate application of the computer program. He/she is expected to get acquainted with the process and documentation of drug dispensing, and communication with patients
   - the notion of pharmacy care and its practical ramifications

4. Medicine ordering. In the process he/she is required to learn for the basic knowledgements:
   - how to order medicine
   - about narcotics and activities involving their handling
   - the rules pertaining to hazardous waste

Evaluation:
Keeping an electronic notebook: description of one syllabus-related practical problem in half/one page in every two weeks.
The pharmacist in charge of the training checks the work and description every second week and evaluates it using a five-grade system. He/She sends the electronic notebook to the Dean’s Office according to the rules of the place of training.
At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He/she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place.

Student evaluation:
After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

State Exam Practice II. Pharmaceutical Business Administration

1. Syllabus for the practice in a public pharmacy before final examination

Duration of the practice:
2+3 months, 8 hours daily, from which two hours may be spent on preparing individually.
Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Main requirements for the student:
   - He/she should accept and sign the non-disclosure document.
• Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up.
• He/she is expected to follow the guidance of the pharmacist in charge of the training.

The expected skills made on the student after completion of the practice:
• practical application of the theoretical knowledge obtained during his / her studies
• the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies,
• he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
• he / she is expected to communicate with the patients in an appropriate way,
• he / she is required to appropriately inform and give advice in connection with the patients’ questions regarding self-healing and preparations without prescription (drugs and other products),
• he / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help.

The student’s tasks during the practice:

Under the supervision and instructions of the pharmacist in charge of the training he / she participates in the following activities:

1. Drug Dispense. In the process he / she is required to solve the following problems:
   • how to check the content and layout of the prescription
   • the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of international non-proprietary name
   • appropriate patient information knowing the effects and adverse effects of drugs
   • recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement)
   • characteristic/obligatory cases and methods of medical information and consultation
   • duties in connection with the known/identified adverse effects of drugs
   • adherence control and means of correction, common uses,
   • the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose
   • the possibilities and rules of access to data regarding the patients’ previous medication (OEP database)
   • the database of nutrition complements and medicinal formula
   • proper application of the labelling and dispensing computer program

2. Preparation of medicine. In the process he / she is required to solve the following problems:
   • How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
   • The legal possibilities of changing the original prescription
   • The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
   • Documentation of preparation, and administrative obligations
   • Storage of materials, processing of basic formulations and subsequent administrative obligations
   • Formulations of the compendium and FoNo
3. Operation, quality assurance. In the process he / she is required to solve the following problems:
   - administrative work in the pharmacy
   - the rules concerning the staff of the pharmacy; qualification, labor law requirements
   - standard procedures for workflow
   - how to check and document workflow
   - the rules pertaining to the examining and sampling incoming medications
   - documentation of examinations

4. Medication management. In the process he / she is required to solve the following problems:
   - aspects of inventory management
   - how to order medicine
   - duties in case of waste products, returned items, damage
   - withdrawal of products from circulation
   - duties regarding shift of prices
   - closings: daily, weekly, periodic as well as schedule of OEP reports
   - importance and practice of supervision of prescriptions
   - about narcotics and activities involving their handling
   - the rules pertaining to hazardous waste.

Evaluation:
Keeping an electronic workbook: the description of one practical problems in half/one page in every two weeks. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean’s Office according to the rules of the place of training.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place.

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

2. Syllabus for the practice in a hospital pharmacy before final examination

Duration of the practice:
1 month, 8 hours daily, from which two hours may be spent on preparing individually.

Pharmacy students should gain experience on the following areas in a hospital pharmacy during their practice regarding the characteristics of supplying medicine: system of in-patient care and medicines financing, medication management (acquisition and selling), preparation of individual and multi-dose medicine, therapeutic consultation, system of quality assurance.
Main requirements for the student:
- He/she should accept and sign the non-disclosure document.
- Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up.

Skills expected from the student after the completion of practice:
- practical application of the theoretical knowledge obtained during his / her studies
- the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies
- appropriate communication with the co-workers at the pharmacy and the qualified and unqualified employees of the hospital
- appropriate communication with the in-patients.

The student’s tasks during the practice:

He/she is required to participate the following activities settled down in the regulations regarding hospital pharmacies (41/2007 Eü M) under the supervision and instruction of the pharmacist in charge of the training:

1. Ordering medicines / storage / dispensing to departments. In the process he / she is required to learn:
   - various ways of supplying medicines: „central procurement”, private tenders, supplying medicines in addition to procurement
   - the IT system of medication management
   - the ways of fulfilling the medicine claims of the departments / patients
   - registry of controlled preparations
   - procedure of fulfilling the individual import and „off-label” claims.

2. Individual and multi-dose sterile and non-sterile preparation of medicine. In the process he / she is required to learn:
   - the FoNo and manual drug making
   - cytotoxic preparations, preparation of mixture infusion
   - the possible solutions for individual needs.

3. Therapeutic consultant tasks. In the process he / she is required to learn:
   - therapeutic protocols (the circle of medicines which can be selected primarily)
   - the informational activity of the pharmacy; medicine-substitution, mistakes in connection with medication, side effects, monitoring, signaling, and reporting interactions.

4. Operation / quality assurance. In the process he / she is required to learn:
   - the place of the pharmacy in the in-patient institutional hierarchy
   - the financing system of the in-patient care; HBCS, the place of the medicine in the HBCS
   - the planning and documentation of dispensing in the in-patient departments
   - the special techniques for subsidizing medication (itemized financing, individual equity, charities)
   - the aim and management of establishing a list of basic medicines
   - the reason for medicine shortages and the handling of it
   - duties in connection with the medicines of clinical medicine trials
   - the participation of the pharmacy in hospital board meeting and work-groups
(pharmacotherapeutic, nutritional, etc.),
- job descriptions, duties and competences
- plans for further trainings, the system of pharmaceutical reporters and professional meetings.

Evaluation:
Keeping an electronic workbook: the description of one practical problems in a half/one page in every two weeks. One of them should describe a therapeutic question in direct connection with the patient, the other topic can be chosen from the three other areas (supplying medicine, making of drugs, operation, making of drugs). The descriptions made during the practice should be concerned with all the areas of the activities in a pharmacy. The instructing pharmacist checks the work and description weekly and evaluates them on a scale of 5. He/she should send the electronic workbook to the Dean’s Office in accordance with the rules of the training location.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place.

Student evaluation:
After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

State Exam Practice II. Pharmaceutical Management, Quality Assurance

1. Syllabus for the practice in a public pharmacy before final examination

Duration of the practice:
2-3 months, 8 hours daily, from which two hours may be spent on preparing individually.
Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Requirements for the student:
- Accept and sign the non-disclosure document
- Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up.
- He/she is expected to follow the guidance of the pharmacist in charge of the training.

The expected skills made on the student after completion of the practice:
- practical application of the theoretical knowledge obtained during his / her studies
- the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies
- he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
• he/ she is expected to communicate with the patients in an appropriate way,
• he / she is required to appropriately inform and give advice in connection with the patients’ questions regarding self-healing and preparations without prescription (drugs and other products)
• he / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help.

The student’s tasks during the practice:

Under the supervision and instructions of the pharmacist in charge of the training he / she participates in the following activities:

1. Drug Dispense. In the process he / she is required to learn:
   • how to check the content and layout of the prescription
   • the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of international non-proprietary name
   • appropriate patient information knowing the effects and adverse effects of drugs
   • recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement)
   • characteristic/obligatory cases and methods of medical information and consultation
   • duties in connection with the known/identified adverse effects of drugs
   • adherence control and means of correction, common uses
   • the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose
   • the possibilities and rules of access to data regarding the patients’ previous medication (OEP database)
   • the database of nutrition complements and medicinal formula
   • proper application of the labelling and dispensing computer program.

2. Preparation of medicine. In the process he / she is required to learn:
   • How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
   • The legal possibilities of changing the original prescription
   • The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
   • Documentation of preparation, and administrative obligations
   • Storage of materials, processing of basic formulations and subsequent administrative obligations
   • Formulations of the compendium and FoNo.

3. Operation, quality assurance. In the process he / she is required to learn:
   • administrative work in the pharmacy
   • the rules concerning the staff of the pharmacy; qualification, labor law requirements
   • standard procedures for workflow
   • how to check and document workflow
   • the rules pertaining to the examining and sampling incoming medications
   • documentation of examinations
4. Medication management. In the process he / she is required to learn:

- aspects of inventory management
- how to order medicine
- duties in case of waste products, returned items, damage
- withdrawal of products from circulation
- duties regarding shift of prices
- closings: daily, weekly, periodic as well as schedule of OEP reports
- importance and practice of supervision of prescriptions
- about narcotics and activities involving their handling
- the rules pertaining to hazardous waste.

Evaluation:
Keeping an electronic workbook: the description of one practical problems in half/one page in every two weeks. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean’s Office according to the rules of the place of training.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place.

Student evaluation:
After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

2. Syllabus for the practice in a hospital pharmacy before final examination

Duration of the practice:
1 month, 8 hours daily, from which two hours may be spent on preparing individually.
Pharmacy students should gain experience on the following areas in a hospital pharmacy during their practice regarding the characteristics of supplying medicine: system of in-patient care and medicines financing, medication management (acquisition and selling), preparation of individual and multi-dose medicine, therapeutic consultation, system of quality assurance.

Requirements for the student:
- Accept and sign the non-disclosure document.
- Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up.

Skills expected from the student after the completion of practice:
- practical application of the theoretical knowledge obtained during his / her studies
- the knowledge of the practical application of the rules and regulations concerning the
operation of pharmacies
- appropriate communication with the co-workers at the pharmacy and the qualified and unqualified employees of the hospital
- appropriate communication with the in-patients.

The student’s tasks during the practice:

He/she is required to participate in the following activities settled down in the regulations regarding hospital pharmacies (41/2007 Eü M) under the supervision and instruction of the pharmacist in charge of the training:

1. Ordering medicines / storage / dispensing to departments. In the process he / she is required to learn:
   - various ways of supplying medicines: „central procurement”, private tenders, supplying medicines in addition to procurement
   - the IT system of medication management, the ways of fulfilling the medicine claims of the departments / patients, registry of controlled preparations, procedure of fulfilling the individual import and „off-label” claims.

2. Individual and multi-dose sterile and non-sterile preparation of medicine. In the process he / she is required to learn:
   - the FoNo and manual drug making
   - cytotoxic preparations, preparation of mixture infusion
   - the possible solutions for individual needs.

3. Therapeutic consultant tasks. In the process he / she is required to learn:
   - therapeutic protocols (the circle of medicines which can be selected primarily)
   - the informational activity of the pharmacy; medicine-substitution, mistakes in connection with medication, side effects, monitoring, signaling, and reporting interactions.

4. Operation / quality assurance. In the process he / she is required to learn:
   - the place of the pharmacy in the in-patient institutional hierarchy
   - the financing system of the in-patient care; HBCS, the place of the medicine in the HBCS
   - the planning and documentation of dispensing in the in-patient departments
   - the special techniques for subsidizing medication (itemized financing, individual equity, charities),
   - the aim and management of establishing a list of basic medicines
   - the reason for medicine shortages and the handling of it
   - duties in connection with the medicines of clinical medicine trials
   - the participation of the pharmacy in hospital board meeting and work-groups (pharmacotherapeutic, nutritional, etc.)
   - job descriptions, duties and competences
   - plans for further trainings, the system of pharmaceutical reporters and professional meetings.

Evaluation:
Keeping an electronic workbook: the description of one practical problems in a half/one page every two weeks. One of them should describe a therapeutic question in direct connection with the patient, the other topic can be chosen from the three other areas (supplying medicine, making of
drugs, operation, making of drugs). The descriptions made during the practice should be concerned with all the areas of the activities in a pharmacy. The instructing pharmacist checks the work and description weekly and evaluates them on a scale of 5. He/she should send the electronic workbook to the Dean’s Office in accordance with the rules of the training location.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place.

Student evaluation:
After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.
Department of Biophysics and Cell Biology

Subject: MATHEMATICS
Year, Semester: 1st year/1st semester
Number of teaching hours:
Lecture: 30
Practical: 30

1st week:
Lecture: Introduction to mathematics: sets and classification of numbers. Order of operations, rounding numbers, scientific notation, direct and inverse proportionality, units and their conversions, prefixes. Linear and quadratic equations, equation systems. Vectors.
Seminar: Same as the lecture.

2nd week:
Lecture: Graphical representation of data, graphs of equations, elementary functions, analyzing graphs of functions, transformations and combination of functions, inverse function. Trigonometric functions and their transformations.
Seminar: Same as the lecture.

3rd week:
Lecture: Limits and their properties, continuity, some theorems on continuous functions
Seminar: Same as the lecture.

4th week:
Lecture: Sequence and series, investigation of convergence
Seminar: Same as the lecture.

5th week:
Lecture: Differentiation: the tangent line problem, some definitions of derivatives, basic differentiation rules
Seminar: Same as the lecture.

6th week:
Lecture: Differentiation part 2: The chain rule, derivatives of trigonometric functions, Implicit differentiation and higher derivatives
Seminar: Same as the lecture.

7th week:
Lecture: Differentiation part 3: Application of derivatives, analysis of functions
Seminar: Same as the lecture.

8th week:
Lecture: Integration, an area problem, definition of definite integral, some theorems on integral calculus, fundamental theorem of calculus
Seminar: Same as the lecture.

9th week:
Lecture: Area between graphs, more applications of integral calculus
Seminar: Same as the lecture.

10th week:
Lecture: Formal integration, indefinite integrals, integration by parts, trigonometric integrals
Seminar: Same as the lecture.

11th week:
Lecture: Integration by trigonometric substitution, partial fraction
Seminar: Same as the lecture.

12th week:
Lecture: Numerical integration, trapezoidal rule, Simpson’s rule
Seminar: Same as the lecture.

13th week:
Lecture: Differential equations.
Seminar: Same as the lecture.
CHAPTER 16

**14th week:**
**Lecture:** More applications of differential equations.
**Seminar:** Same as the lecture.

**15th week:**
**Lecture:** Application of differential equations in biochemistry, Michaelis-Menten equation of enzyme kinetics.
**Seminar:** Test.

**Requirements**

1. **Lectures:** Attendance to lectures is emphatically recommended. All material covered in the lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Some concepts and ideas are discussed in the lectures only and are not in the textbook. If a student is present on every lecture, he/she receives 10 bonus points (5 points for week 2-5 and 5 for week 8-15) which is added to the result of the final exam and/or the course test according to point 5. Attendance to the lectures will be checked randomly. No kind of certificate, including a medical certificate, is accepted for the absences.

2. **Seminars:** Attendance to seminars is compulsory, however a student may miss maximum 4 (four) seminars. The teacher will discuss the material of the lectures in more detail on seminars. In the seminars, students are encouraged to ask questions related to the topic of the lectures discussed.

3. **Exemptions:** Applications for exemption from the mathematics course has to be turned in to the Credit Transfer Committee. Such requests are not accepted by the Biomathematics Division or the Department of Biophysics and Cell Biology. The deadline for such applications is Friday on the third week. No application will be considered after this date.

4. **Requirements for signing the lecture book:** Maximum 4 absences are allowed from the seminars. If the number of absences from the seminars is more than four, we will not sign the lecture book.

5. **Self-control tests (STC) and final exam (FE):** Students will have two STCs during the semester. One on week 7 and the other one on week 13 whose structure will be identical to those of the final exam. None of the SCTs are obligatory. Each SCT will be graded (0-100 %, 0% for absence) and the results of the two SCTs will be averaged (Xave). The missed test will be counted as 0% in the average. Missed SCTs cannot be made up at a later time. Based on the SCTs students may obtain the following grades:

<table>
<thead>
<tr>
<th>Xave percentage</th>
<th>Mark</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-59.99</td>
<td>FAIL(1)</td>
</tr>
<tr>
<td>60-69.99</td>
<td>PASS(2)</td>
</tr>
<tr>
<td>70-79.99</td>
<td>SATISFACTORY(3)</td>
</tr>
<tr>
<td>80-89.99</td>
<td>GOOD(4)</td>
</tr>
<tr>
<td>90-100</td>
<td>EXCELLENT(5)</td>
</tr>
</tbody>
</table>

Students who could not meet the above described conditions for exemption during the two semesters must sit for the FE from the whole material of the semester. Students have three chances (A, B, C) for passing the mathematics FE in the winter exam period after the semester in which the course was taken. On the FE students may obtain the following grades:
6. Compulsory reading:

7. Rules for calculator usage during course tests and the final examination
In order to ensure a fair evaluation, to avoid disturbances in the testing room, and to protect the security of the test material the following types of calculators are NOT permitted:
- Calculators with built-in computer algebra systems (capable of simplifying algebraic expressions)
- Pocket organizers, handheld or laptop computers
- Any device capable of storing text. Calculators with a typewriter keypad (so-called QWERTY devices), electronic writing pads and pen-input devices are not allowed either. Calculators with letters on the keys (e.g. for entering hexadecimal numbers or variable names) are permitted as long as the keys are not arranged in QWERTY format
- Calculators or other devices capable of communicating with other devices
- Calculators built into wireless phones
- Calculators with paper tape or models that make noise
In general, students may use any four-function, scientific or graphing calculator except as specified above. Sharing calculators during tests is not allowed, and the test proctor will not provide a calculator.

Department of Foreign Languages

Subject: HUNGARIAN CRASH COURSE
Year, Semester: 1st year/1st semester
Number of teaching hours:
Practical: 36

1st week:
Seminar:
Practical: 1st day: 1. lecke, 2. lecke I. rész
(Greetings, the alphabet, numbers 0-20, colours, everyday expressions, nationalities) - 2nd day: 2. lecke II. rész, 3. lecke (languages, numbers 21-29, names of places, the days of the week, numbers 30-100, the time, hány óra van?) - 3rd day: 4. lecke, 5. lecke I. rész (Test Your Knowledge 1, adjectives and adverbs, verbs expressing activities 1) - 4th day: 5. lecke II.

2nd week:
Practical: 1st day: 9. lecke, 10. lecke I. rész
(Food, drink, fruit, vegetables, the menu, ordering in a restaurant, shopping in the market, números 1000-1000000000, verbs expressing activities 2, everyday expressions, ordinal numbers) - 5th day: 7. lecke, 8. lecke (Revision 1, everyday objects, food and drink, adverbs of frequency)
the uses of **tessék**, the weather) - **2nd day**: 10. lecke II. rész, 11. lecke (the seasons and months, clothes, Test Your Knowledge 2) - **3rd day**: 12. lecke, 13. lecke I. rész (body parts, adjectives and descriptions, accessories, jobs, places) - **4th day**: 13. lecke II. rész, 14. lecke (personal details and filling in a form, family relations, revision 2) - **5th day**: End course exam. Oral exam.

### Requirements

9.00 - 10.30: language classes  
10.30 - 11:00 break  
11.00 - 12.30: language classes

Assessment: five grade evaluation (AW5).  
Evaluation: Based on a written final test (80 %) + class participation + daily word quizzes (20 %).  
Passing the oral exam is a minimal requirement for the successful completion of the Hungarian Crash Course. The oral exam consists of a role-play from a list of situations covered in the coursebook. A further minimal requirement is the knowledge of 200 words.

STUDENTS WHO DO NOT ATTEND THE HUNGARIAN CRASH COURSE DUE TO THEIR OWN FAULT OR FAIL THE ORAL EXAM HAVE TO TAKE AN EXTRA COURSE FOR AN ADDITIONAL FEE OF 500 USD DURING THE FIRST SEMESTER.

Subject: **HUNGARIAN LANGUAGE I/1.**  
Year, Semester: 1st year/1st semester  
Number of teaching hours:  
Practical: 24

Requirements

Attendance
Attending language classes is compulsory. Students should not be absent from more than 10 percent of the classes. If a student is late it is considered as an absence. If a student misses more than two occasions, the final signature may be refused and the student must repeat the course.
Absentees can make up the missed classes in the same week. Maximum one language class may be made up with another group. Students have to ask for the teacher's written permission (by e-mail) 24 hours in advance. Students can attend any class (make up or regular) only if they take their coursebook with them.
The teacher evaluates active participation in each class. Students are not supposed to share coursebooks in the classes therefore if they fail to bring the coursebook to the class for the second time the attendance is refused.

Testing, evaluation
In each Hungarian language course, students must sit for 2 written language tests and an oral exam. A further minimum requirement is the knowledge of 200 words per semester divided into 10 word quizzes. There are five word quizzes before and another five after the midterm test. If students fail or miss any word quizzes they cannot start their written test and have to take a vocabulary exam that includes all 100 words before the midterm and end term tests. A word quiz can be postponed by a week and students can take it only with their own teacher. Students can get bonus points (5-5%) by taking two extra quizzes containing 20 sentences each before the midterm and end term tests. The sentences are taken from the units of the coursebook.
The oral exam consists of a role-play from a list of situations covered in the coursebook. If students fail the oral exam, they fail the whole course. The results of the written tests and the oral exam are combined and averaged.
Based on the final score the grades are given as follows.

<table>
<thead>
<tr>
<th>Final score</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-59</td>
<td>fail (1)</td>
</tr>
<tr>
<td>60-69</td>
<td>pass (2)</td>
</tr>
<tr>
<td>70-79</td>
<td>satisfactory (3)</td>
</tr>
<tr>
<td>80-89</td>
<td>good (4)</td>
</tr>
<tr>
<td>90-100</td>
<td>excellent (5)</td>
</tr>
</tbody>
</table>

If the final score of the written tests is below 60, the student can take a written remedial exam once covering the whole semester’s material.

Course book: See the website of the Department of Foreign Languages: [ilekt.med.unideb.hu](http://ilekt.med.unideb.hu)
Audio files to the course book, oral exam topics and vocabulary minimum lists are also available on the website.

Subject: LATIN LANGUAGE I.
Year, Semester: 1st year/1st semester
Number of teaching hours: Practical: 30

1st week:
**Practical**: Introduction to Pharmaceutical Terminology Anatomical planes and directions.

2nd week:
**Practical**: Pharmaceutical substances, Chemistry terms
CHAPTER 16

3rd week:
Practical: The human body; Greek and Latin equivalents

4th week:
Practical: Names of plants and plant parts; names of chemical compounds

5th week:
Practical: Parts of prescriptions, types of prescriptions in Hungary

6th week:
Practical: The human skeleton; numbers

7th week:
Practical: Pharmacy preparations and containers; 1st and 2nd declension

8th week:
Practical: Revision

9th week:
Practical: Regions; formation of adjectives

10th week:
Practical: Declension of adjectives with 3 endings; joints and bony connections

11th week:
Practical: Names of joints; declension of numbers

12th week:
Practical: 3rd declension; Declension of adjectives with 1 or 2 endings

13th week:
Practical: Summary of the declensions and adjectives

14th week:
Practical: Revision

15th week:
Practical: Closing of the semester, evaluation

Requirements

Attendance
Attending language classes is compulsory. Students should not be absent from more than 10 percent of the classes. If a student is late it is considered as an absence. If a student misses more than two occasions, the final signature may be refused and the student must repeat the course. Absentees can make up the missed classes in the same week. Maximum one language class may be made up with another group. Students have to ask for the teacher's written permission (by e-mail) 24 hours in advance. Students can attend any class (make up or regular) only if they take their coursebook with them.

Testing, evaluation
In each Latin language course, students must sit for 2 written language tests. A further minimum requirement is the knowledge of 300 words per semester. There is a written word quiz in the first 5-10 minutes of the class, every week. If a student fails 4-4 successful word quizzes till the mid-term and the end-term tests he/she is not allowed to sit in for the test. If a student does not have minimum 8 successful word quizzes he/she has to take a vocabulary exam that includes all 300 words. A word quiz can be postponed by a week and students can take it only with their own teacher. Students can obtain bonus points (5-5%) by taking all the word quizzes successfully. Based on the final score the grades are given as follows.
Final score | Grade          
---          | ---           
0 - 59      | fail (1)      
60-69       | pass (2)      
70-79       | satisfactory (3) 
80-89       | good (4)      
90-100      | excellent (5) 

If the final score is below 60, the student can take a remedial exam once covering the whole semester’s material.

Coursebook:
See the website of the Department of Foreign Languages: ilekt.med.unideb.hu
Minimum vocabulary lists and further details are also available on the website.

Department of Human Genetics

Subject: PHARMACEUTICAL BIOLOGY I.
Year, Semester: 1st year/1st semester
Number of teaching hours:
Lecture: 21
Practical: 30

1st week:
Lecture: 1. Introduction into cell biology. The most important organic and inorganic compounds of the living cells. 2. Introduction into cell biology. Structural and functional characteristics of the bacterial cell.

2nd week:
Practical: 2. Microscopy II. The principles of phase contrast, dark field and polarization microscopy. Setting up the microscope. Practicing the use of light microscope.

3rd week:
Lecture: 5. The most important morphological and functional characteristics of fungal cell. The biotechnological importance of fungi. 6. The plant cell and its most characteristic organelles.
Practical: 3. Chemical structure of proteins, nucleic acids, and carbohydrates and their biological significance.
Self Control Test (Test on Microscopy in extra time)

4th week:

5th week:
Practical: 5. Comparison of the prokaryotic and eukaryotic cell. Eukaryotic cell types, organelles,
cell components. Study of electron micrographs.

6th week:
Self Control Test (1st self-control test in extra time)

7th week:
Lecture: No lecture scheduled.

8th week:

9th week:

10th week:
Lecture: 16. The mechanics of cell division, mitosis. 17. Meiosis and fertilization
Practical: 10. Isoelectric point of ovalbumin and optimum pH of the β-galactosidase. Examination on the use of light microscope.
Self Control Test (2nd self-control test in extra time)

11th week:
Lecture: 18. The regulation of the cell cycle.

12th week:
Lecture: 19. The bacterial cell division.

13th week:

14th week:
Lecture: No lecture scheduled.
Self Control Test (3rd self-control test in extra time)

15th week:
Lecture: No lecture scheduled.

Requirements

Pharmaceutical Biology I. (first semester subject) is a prerequisite of Pharmaceutical Biology II. (second semester subject).

Conditions of signing the lecture book:

1. Attendance
Concerning attendance, the rules laid out in the EER of the University are clear. The presence of students at laboratory practices and seminars is obligatory and will be recorded. The professor refuses his/her signature in the student's Lecture Book for the semester's course-work.
in the case of over four weeks of absence, even if the student has an acceptable excuse. If the student is absent from more than two practices or seminars (taken together), the semester will be accepted only if they pass an examination based on the material covered by the laboratory classes and seminars of the semester (lab test). Successful accomplishment of the laboratory practices will be controlled by signing the laboratory notes. If 3 or more practices will not be accepted, the lecture book will not be signed. These students must sit for a written exam from the laboratory material.

The presence of students on at least 50% of lectures is obligatory and will be recorded. The professor refuses his/her signature in the student's Lecture Book for the semester's course-work if the student was absent from more than 10 lectures, even if the student has an acceptable excuse.

2, Self-control tests
During the semesters there will be 3 self control tests offered. Participation in at least two of them is required for the signature.

3, Microscopy exam
The students also have to show up their knowledge in handling and setting the light microscope on an oral exam during the practices and also have to write a knowledge test about microscopy (passing limit is 50%). Both oral and written microscopy test have to be successfully completed for the signature. Unsuccessful exams can be repeated two times during the semester.

Exemption requests:
Applications for exemption (based on previous studies in other universities) should be submitted during the first two weeks of the semester. Requests are not accepted after that deadline! Exemption is granted only, if the student can pass an "Assessment of knowledge" test. The passing limit is 50%.

Rules concerning repeaters:
Attendance of labs and seminars for those repeaters who have a signed lecture book from the previous year (i.e. they failed, or they are repeaters because they have never taken Pharmaceutical Biology I. exam) is dispensable. Students should register for the subject electronically during the first weeks of the semester. They can take the three midterm tests in order to qualify for test bonuses and they take the regular exam at the end of the semester. Students, who did not earn a signature in the previous year have to register and attend the labs and seminars and they are considered as the other students registering the course at the first time.

End of semester examination (ESE)
There will be a written examination at the end of the first semester which covers all the material of the semester taken in the lectures, seminars, and laboratory practices (for a detailed list see the University Bulletin). The examination questions include multiple choice, and short essay questions, figures, definitions, etc. The marks are based on the student's performance, expressed in percentage (%) as shown in the table below:

<table>
<thead>
<tr>
<th>Percentage (%)</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - 49.99</td>
<td>fail (1)</td>
</tr>
<tr>
<td>50.00 - 61.99</td>
<td>pass (2)</td>
</tr>
<tr>
<td>62.00 - 69.99</td>
<td>satisfactory (3)</td>
</tr>
</tbody>
</table>
The percentage values include the student's performance at the ESE as well as the bonus percentage they have obtained by taking the three mid-semester tests. The following table shows the bonus percentage based on the average result of the semester tests. Absence counts as 0%. Bonuses are calculated only in the year of acquisition.

<table>
<thead>
<tr>
<th>Average of the 3 tests (%)</th>
<th>Bonus %</th>
</tr>
</thead>
<tbody>
<tr>
<td>50.00 - 53.99</td>
<td>3</td>
</tr>
<tr>
<td>54.00 - 57.99</td>
<td>4</td>
</tr>
<tr>
<td>58.00 - 61.99</td>
<td>5</td>
</tr>
<tr>
<td>62.00 - 65.99</td>
<td>6</td>
</tr>
<tr>
<td>66.00 - 69.99</td>
<td>7</td>
</tr>
<tr>
<td>70.00 - 73.99</td>
<td>8</td>
</tr>
<tr>
<td>74.00 - 77.99</td>
<td>9</td>
</tr>
<tr>
<td>78.00 - 81.99</td>
<td>10</td>
</tr>
<tr>
<td>82.00 - 85.99</td>
<td>11</td>
</tr>
<tr>
<td>86.00 - 100</td>
<td>12</td>
</tr>
</tbody>
</table>

ESE grade may be considered as part of the final exam mark upon the request of the student (see Pharmaceutical Biology II.). The slides of the lectures and up-to-date information can be found at https://elearning.med.unideb.hu, username and password is your network-id (same as Neptun-id) and password. You will be able to check the content after the Neptun has registered you to the subject. Departmental homepage: https://humangenetics.unideb.hu

Department of Inorganic and Analytical Chemistry

Subject: **GENERAL CHEMISTRY PRACTICE**
Year, Semester: 1st year/1st semester
Number of teaching hours:
Seminar: **15**
Practical: **60**

1st week:
**Seminar:** Atomic weight, molecular weight, empirical formula, molecular formula, amount of substance. Determination of empirical formula based on weight percent composition and on elemental analysis.

2nd week:
**Seminar:** Units of concentration, solution preparation. Interconversion of units.

3rd week:
**Seminar:** Interconversion of concentration units, exercises.
4th week:
**Seminar:** Exercises involving crystallization.
**Practical:** Introduction to chemical laboratory:
General rules of laboratory work. Safety training.
Introduction to laboratory equipment. Overview of received equipment. Use of gas burners (demonstration).

5th week:
**Seminar:** Composition of solid and gas mixtures. Stoichiometric calculations based on chemical equations.
**Practical:** Basic laboratory operations:

6th week:
**Seminar:** Exercises based on acid-base titrations. Stoichiometric calculations based on chemical equations.
**Practical:** Grinding, preparation of solution, decanting, centrifuging, filtration (demonstration). Preparation of a standard solution from crystalline solid. Measurement of density: determination of the density of the prepared solution with a pycnometer, calculation of the weight percent composition.

7th week:
**Seminar:** Exercises in stoichiometry and concentration calculations.
**Practical:** Heating, cooling, use of a water bath (demonstration). Purification of a benzoic acid sample contaminated with sodium-chloride. Preparation of an alum (substance #1).

8th week:
**Seminar:** Gas laws, exercises connected to evolution of gases.
**Practical:** General mid-term test
#1 Determination of the composition of a mixture of KClO3 and KCl. Melting point measurement: the melting point of Na2S2O3 Determination of the melting point of purified benzoic acid. Substance #1 due in.

9th week:
**Seminar:** Balancing of redox reactions.
**Practical:** Calculations based on redox reactions.

10th week:
**Seminar:** Balancing of redox reactions.
**Practical:** Application of gas laws, gas handling in the laboratory: Laboratory work with gases (gas cylinders, other methods for gas generation). Preparation of oxygen gas in a laboratory gas generator, burning of sulfur in oxygen. Determination of molecular weight based on ideal gas law.

11th week:
**Seminar:** Exercises in concentration calculation and redox reactions.
**Practical:** Preparation of a salt from its metal (substance #2). Studies of reactions involving gas formation or precipitation.

12th week:
**Seminar:** Definition of pH. Calculation of pH for strong acids and bases.
**Practical:** Quantitative study of a precipitation reaction. Dependence of reaction rate on the concentration of reactants. Substance #2 due in.

13th week:
**Seminar:** Calculation of pH for weak acids and bases.
**Practical:** Liquid-liquid extraction (demonstration). Study of buffer solutions (acetic acid - sodium acetate buffer and ammonia - ammonium chloride buffer). Hydrolysis of salts.

14th week:
**Seminar:** Electrochemical exercises. Review exercises.
**Practical:** Standard electrode potentials and chemical reactions. Study of a Daniell cell.
Return of equipment.
CHAPTER 16

Requirements

The objective of the laboratory work is to introduce first-year students of different background to laboratory work, the use of basic laboratory equipment, simple laboratory operations and measurements. In addition, students are expected to prepare certain simple chemicals and run various basic experiments to familiarize themselves with chemical laboratory work.

The seminar involves solving exercises and problems connected to stoichiometry, concentration measurement and pH calculation. The lab manual will be made available to the students gradually during the semester as an English translation of the Hungarian original. The preparatory material to be studied before laboratory work is over-viewed before each experiment description in this manual. The weekly syllabus lists the particular topics covered and gives a full description of the experiments. The word ‘demonstration’ in the syllabus refers to experiments that the instructors carry out for the students. Students should come to lab sessions fully prepared. Students should learn the core theoretical background of the experiments (reading the material once is insufficient) and solve the pre-lab exercises in the lab manual every week before the lab session. The sections ‘Laboratory notes’ and ‘Review exercise and problems’ should be completed during the laboratory session. After each session the instructors overview the lab notes and make corrections if necessary. Students can ask questions regarding the laboratory preparation material during the seminar each week before the lab session. Each week the laboratory session begins with a short test (not more than 15 minutes) based exclusively on the preparatory material of that week and the previous week and the results of the experiments carried out the previous week. During the semester, students are required to write two general tests (week 8 and week 14) which are based on the course material for weeks 1-8 and 9-14, respectively.

Grading is based on a five-level scale: 1 (fail), 2 (pass), 3 (average), 4 (good), 5 (excellent). The final course grade is given based on the results of these tests, the quality of the laboratory notes and the quality of laboratory work. The average score from both the short tests and the general tests must be above 2.00 to avoid a ‘fail’ final course grade. Students with ‘fail’ final course grade due to inadequate laboratory work have to retake the course the next year. Students with ‘fail’ final course grade due to low test results can re-take a comprehensive test exam in the examination period. It is not allowed to miss any laboratory practices/seminars. If a student misses one lab practice, medical certification is needed. If a student misses two or more lab practices/seminars even for any medical reasons, the student’s lecture book won’t be signed and she or he has to retake the course next year.

Subject: GENERAL CHEMISTRY THEORY
Year, Semester: 1st year/1st semester
Number of teaching hours:
Lecture: 45

1st week:
Lecture: Sciences and chemistry: Classification of natural sciences, history and development of chemistry. The concept of chemical change. Quantitative laws in chemistry, basic concepts of stoichiometry. The SI system of units, the most important physical quantities and units. Conservation of mass and energy. Einstein's equation on mass-energy equivalence. The law of definite proportion, the law of multiple proportions, law of combining gas volumes, Avogadro's law. Development of Dalton's atomic theory and its influence on chemistry. Relative atomic and molecular weights. Amount of substance and the definition of mole. Notations for elements and compounds, symbol, empirical formula, molecular formula, structure, isomerism. Valency and oxidation number. Oxidation number in inorganic compounds. Types of chemical reactions. Latin names of compounds.
2nd week:

3rd week:

4th week:

5th week:

6th week:
Lecture: Equilibrium: The equilibrium condition and the equilibrium constant. Possibilities to shift the composition of equilibria. Dependence of the equilibrium constant on temperature and pressure. Le Chatelier's principle.

7th week:

8th week:

9th week:

10th week:

11th week:
change across the periodic table.

**12th week:**

**13th week:**

**14th week:**

**15th week:**

**Requirements**

Test after the completion of the semester, no midterm tests, sample test questions provided on the website in the beginning of December (www.inorg.unideb.hu)

**Department of Pharmaceutical Technology**

**Subject:** PHARMACY PROPEDEUTICS  
Year, Semester: 1st year/1st semester  
Number of teaching hours: Lecture: 15

**1st week:**
**Lecture:** The methods of Greek, Roman and Arab treatments.  
**Practical:** The methods of Greek, Roman and Arab treatments.

**2nd week:**
**Lecture:** Pharmaceutics in ancient times and in middle ages.  
**Practical:** Pharmaceutics in ancient times and in middle ages.

**3rd week:**
**Lecture:** The development of anatomical and morphological thinking.  
**Practical:** The development of anatomical and morphological thinking.

**4th week:**
**Lecture:** The development of bacteriological thinking.  
**Practical:** The development of bacteriological thinking.
**5th week:**  
**Lecture:** The development of physiological thinking.  
**Practical:** The development of physiological thinking.

**6th week:**  
**Lecture:** The development of medical departments.  
**Practical:** The development of medical departments.

**7th week:**  
**Lecture:** Factors that helped in the development of theoretical and practical pharmacy in Hungary.  
**Practical:** Factors that helped in the development of theoretical and practical pharmacy in Hungary.

**8th week:**  
**Lecture:** The development of pharmacies.  
**Practical:** The development of pharmacies.

**9th week:**  
**Lecture:** The pharmaceutical career as a profession.  
**Practical:** The pharmaceutical career as a profession.

**10th week:**  
**Lecture:** The structural build-up of the Hungarian public health.  
**Practical:** The structural build-up of the Hungarian public health.

**11th week:**  
**Lecture:** Drug as remedy.  
**Practical:** Drug as remedy.

**12th week:**  
**Lecture:** Grouping of drugs. (origin, therapeutic effect, the area of utilization, the method of administration)  
**Practical:** Grouping of drugs. (origin, therapeutic effect, the area of utilization, the method of administration)

**13th week:**  
**Lecture:** Drug supply. The functional conditions of pharmacies (personal, material).  
**Practical:** Drug supply. The functional conditions of pharmacies (personal, material).

**14th week:**  
**Lecture:** The professional books, journals in a pharmacy. (Pharmacopoeia, Hungarian/foreign). Formulae Normales (pharmaceutical and medical edition). Prescriptions.  
**Practical:** The professional books, journals in a pharmacy. (Pharmacopoeia, Hungarian/foreign). Formulae Normales (pharmaceutical and medical edition). Prescriptions.

**15th week:**  
**Lecture:** Test.  
**Practical:** Test.

**Requirements**

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.
Department of Solid State Physics

Subject: PHYSICS
Year, Semester: 1st year/1st semester
Number of teaching hours:
Lecture: 15
Practical: 30

1st week:

2nd week:

3rd week:

4th week:
Lecture: Conserved quantities. Momentum, angular momentum, work and energy.

5th week:

6th week:
Lecture: Vibrations: Harmonic vibration, force law and energy conservation.

7th week:

8th week:
Lecture: Electrostatics. Charges, Coulomb's law, electrostatic potential.

9th week:
Lecture: Electromagnetism. The Lorentz force, magnetic fields. Induction, electromagnetic waves.

10th week:

11th week:

12th week:

13th week:

14th week:
Lecture: Nuclear physics: Radioactivity. Radiations. The mass defect. The structure of the nucleus.

15th week:

Requirements

Aim of the course is to introduce the basic concepts and quantities for natural science studies. Aim of the practice is to provide skills to apply physical laws to simple situations to derive quantitative
result, and use physical quantities properly.

Course topics:

1. Kinematics, description of motion, velocity, acceleration, path, path length
2. Planar motion, projectiles, rotation, vibration.
4. Conserved quantities. Energy, momentum, work and potential energy,
7. Elastic media, the hooks law, waves, wave propagation, wave equation, harmonic waves.
11. Light as an electromagnetic wave, and light as a quanta. Connection between the color and the wavelength. The photon, Photoelectric effect.
14. Consultation

Requirements for the practice is the completion of two problem solving tests during the semester. The course is graded based on the written exam results.

Department of Anatomy, Histology and Embryology

Subject: **PHARMACEUTICAL ANATOMY**

Year, Semester: 1st year/2nd semester

Number of teaching hours:

**Lecture:** 45

**Practical:** 30

**1st week:**

**Lecture:** Covering and lining epithelia. Glandular epithelium. Connective tissues.

**Seminar:** Histology of epithelial tissues.

**Practical: Histology:** Epithelial tissues

Demonstration:
1. Endothel (small intestine, HE)
2. Columnar epithelium (small intestine, brush border, HE)
3. Pseudostratified epithelium with cilia (trachea, HE)
4. Stratified squamous non-keratinizing epithelium (oesophagus, HE)
5. Stratified squamous keratinizing epithelium (fingertip, HE)
6. Sebaceous, sweat and apocrine glands (axillary skin, HE)
7. Mucous and serous glands (submandibular gland, HE)

**2nd week:**

**Seminar:** Histology of connective tissue.

**Practical: Histology:** Connective tissue.

Demonstration:
1. Mesenchyme (umbilical cord, HE)
2. Fibroblasts (healing wound, HE)
3. Mast

3rd week:
Seminar: Histology of adipose tissue, cartilage and bone.

4th week:
Lecture: Histology of lymphatic organs I.
Histology of lymphatic organs II. Fertilization. Cleavage.
Seminar: Histology of bone formation and muscle tissue.

5th week:
Lecture: Gastrulation, formation of the mesoderm. Differentiation of the ectoderm and mesoderm. Differentiation of the endoderm, folding of the embryo.
Seminar: Histology of blood vessels, blood, bone marrow.

6th week:
Seminar: Histology of lymphatic organs.

7th week:
Lecture: The upper limb. The lower limb. The skull and the back.
Seminar: Anatomy of upper and lower limb.
Practical: Anatomy: Upper and lower limbs. The bones, joints, muscles, blood vessels and nerves of the upper limb. Sites of venous injections and measurement of blood pressure. Bones, ligaments and membranes of the pelvis. The structure and function of the pelvic girdle. The bones, joints, muscles, blood vessels and nerves of the lower limb. Sites of muscular injections. Femoral canal.

8th week:
Seminar: Anatomy of head, neck and back.

9th week:
Lecture: The heart I. The heart II. The trachea, lungs and pleura.
Seminar: Anatomy of the heart and respiratory system.
Practical: Anatomy: The anatomy of the heart and the respiratory system. The structure of the wall of the thorax. Lymphatic drainage of the

10th week:
Seminar: Histology of the respiratory system.

11th week:
Lecture: Development and general organization of the alimentary system. The oesophagus. The stomach. Small and large intestines.
Seminar: Anatomy of the alimentary system.
Practical: Anatomy: The anatomy of the alimentary system. The structure and layers of the abdominal wall. The stomach, the duodenum, the liver, the pancreas and the spleen. Demonstration of some parts of the small and large intestines. The peritoneum. The abdominal aorta and its branches. Lymphatic drainage of the abdominal cavity. The diaphragm.

12th week:
Lecture: The pancreas. The liver I. The liver II. The system of the portal vein. The peritoneum. The retroperitoneum.
Seminar: Histology of the alimentary system.

13th week:
Lecture: Neuroendocrine regulation. The hypothalamo-hypophyseal system. The pineal, thyroid, parathyroid and suprarenal glands. The kidney
Seminar: Histology of the endocrine system.

14th week:
Lecture: The urinary system Male genital organs
Seminar: Anatomy of the urogenital system.

15th week:
Lecture: Female genital organs I. Female genital organs II. Development of the urogenital system
Seminar: See: practical

Requirements
Concerning attendance, the rules written in the Regulations Governing Admission, Education and Examinations of the University are valid. The presence in practices, seminars and lectures will be recorded. The head of the department may refuse to sign the Lecture Book if a student is absent more than twice from practices and seminars in one semester even if he/she has an acceptable reason.
The program of the lectures, seminars and practices are written in the University Calendar.

Midterm examinations:
Two midterm examinations will be held, one on the 7th week and the other on the 15th week. The exams cover the topics of lectures, seminars and practices of the second semester.

Evaluation of the midterm examinations:
The midterm exams will be evaluated with points and the points of the two examinations will be added. Students with scores higher than 60% earn an exemption from the final examination with a mark that will be calculated on the basis of the overall performance on the two midterm examinations.

End-semester exam
The end-semester exam is a written exam that covers the topics of lectures, seminars and practices of the semester. The exam will be evaluated with points that will be converted into final mark in the following way:

- 0 – 59 % fail (1)
- 60 – 69 % pass (2)
- 70 – 79 % satisfactory (3)
- 80 – 89 % good (4)
- 90 – 100 % excellent (5)

Registration for the exam and postponement: Through the NEPTUN system

Evaluation

### Requirements

**Attendance**

Attending language classes is compulsory. Students should not be absent from more than 10 percent of the classes. If a student is late it is considered as an absence. If a student misses more than two occasions, the final signature may be refused and the student must repeat the course.

Absentees can make up the missed classes in the same week. Maximum one language class may be made up with another group. Students have to ask for the teacher's written permission (by e-mail) 24 hours in advance. Students can attend any class (make up or regular) only if they take their coursebook with them.

The teacher evaluates active participation in each class. Students are not supposed to share coursebooks in the classes therefore if they fail to bring the coursebook to the class for the second time the attendance is refused.

**Testing, evaluation**

In each Hungarian language course, students must sit for 2 written language tests and an oral exam. A further minimum requirement is the knowledge of 200 words per semester divided into 10 word quizzes. There are five word quizzes before and another five after the midterm test. If students fail or miss any word quizzes they cannot start their written test and have to take a vocabulary exam that includes all 100 words before the midterm and end term tests. A word quiz can be postponed by a week and students can take it only with their own teacher. Students can get bonus points (5-5%) by taking two extra quizzes containing 20 sentences each before the midterm and end term tests. The sentences are taken from the units of the coursebook.

The oral exam consists of a role-play from a list of situations covered in the coursebook. If students fail the oral exam, they fail the whole course. The results of the written tests and the oral exam are combined and averaged.

Based on the final score the grades are given as follows.

<table>
<thead>
<tr>
<th>Final score</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-59</td>
<td>fail (1)</td>
</tr>
<tr>
<td>60-69</td>
<td>pass (2)</td>
</tr>
<tr>
<td>70-79</td>
<td>satisfactory (3)</td>
</tr>
</tbody>
</table>
If the final score of the written tests is below 60, the student can take a written remedial exam once covering the whole semester’s material.

Course book:
See the website of the Department of Foreign Languages: ilekt.med.unideb.hu
Audio files to the course book, oral exam topics and vocabulary minimum lists are also available on the website.

Subject: LATIN LANGUAGE II.
Year, Semester: 1st year/2nd semester
Number of teaching hours:
Practical: 30

1st week:
Practical: The 3rd declension, declension of adjectives of one or two endings

2nd week:
Practical: Muscles

3rd week:
Practical: Comparison of adjectives, prefixes and prepositions

4th week:
Practical: Latin conjugation

5th week:
Practical: The digestive system

6th week:
Practical: Routes of drug administration. Participles. The fourth and fifth declension.

7th week:
Practical: Prescriptions related to the GI tract.

8th week:
Practical: The respiratory system.

9th week:
Practical: Medicines of the respiratory system

10th week:
Practical: Latin diminutives. The skin.

11th week:
Practical: Dermatological problems and skin preparations.

12th week:
Practical: The cardiovascular system.

13th week:

14th week:
Practical: Prescriptions related to the nervous system.

15th week:
Practical: Evaluation.

Requirements
Attendance
Attending language classes is compulsory. Students should not be absent from more than 10 percent
of the classes. If a student is late it is considered as an absence. If a student misses more than two occasions, the final signature may be refused and the student must repeat the course. Absentees can make up the missed classes in the same week. Maximum one language class may be made up with another group. Students have to ask for the teacher's written permission (by e-mail) 24 hours in advance. Students can attend any class (make up or regular) only if they take their coursebook with them.

**Testing, evaluation**
In each Latin language course, students must sit for 2 written language tests. A further minimum requirement is the knowledge of 300 words per semester. There is a written word quiz in the first 5-10 minutes of the class, every week. If a student fails 4-4 successful word quizzes till the mid-term and the end-term tests he/she is not allowed to sit in for the test. If a student does not have minimum 8 successful word quizzes he/she has to take a vocabulary exam that includes all 300 words. A word quiz can be postponed by a week and students can take it only with their own teacher. Students can obtain bonus points (5-5%) by taking all the word quizzes successfully. Based on the final score the grades are given as follows.

<table>
<thead>
<tr>
<th>Final score</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - 59</td>
<td>fail (1)</td>
</tr>
<tr>
<td>60-69</td>
<td>pass (2)</td>
</tr>
<tr>
<td>70-79</td>
<td>satisfactory (3)</td>
</tr>
<tr>
<td>80-89</td>
<td>good (4)</td>
</tr>
<tr>
<td>90-100</td>
<td>excellent (5)</td>
</tr>
</tbody>
</table>

If the final score is below 60, the student can take a remedial exam once covering the whole semester’s material.

**Coursebook:**
See the website of the Department of Foreign Languages: ilekt.med.unideb.hu
Minimum vocabulary lists and further details are also available on the website.

**Department of Human Genetics**

Subject: **PHARMACEUTICAL BIOLOGY II.**
Year, Semester: 1st year/2nd semester
Number of teaching hours:
Lecture: **35**
Practical: **30**

**1st week:**
**Practical:** Seminar: Introduction to genetics. Separation of cell organelles by density gradient centrifugation. DNA, RNA, protein separation techniques.

**2nd week:**
**Practical:** Seminar: Cytogenetics.
### 3rd week:
**Lecture:** (7) Human mendelian traits and diseases. Inborn errors of metabolism. (8) Genetics of blood groups and HLA system. (9) DNA polymorphisms.
**Practical:** Seminar: Transmission genetics.

### 4th week:
**Lecture:** (10) Polygenic inheritance and multifactorial traits. (11) From gene to phene. Molecular view of genotype and phenotype. Molecular mechanisms of genetic diseases. (12) DNA as genetic material. The structure of the DNA.
**Practical:** Seminar: Pedigree analysis. Problem solving and seminar on mendelian genetics.

### 5th week:
**Lecture:** (13) Replication of prokaryotic and eukaryotic DNA. (14) Prokaryotic transcription.
**Practical:** Study of sex chromatin. Demonstration of mammalian chromosomes. Preparation of metaphase spreads.
**Self Control Test (1st self-control test in extra time.)**

### 6th week:
**Practical:** Detection of human polymorphism by polymerase chain reaction.

### 7th week:
**Practical:** Induction of beta-galactosidase in E. coli cells. PCR evaluation of the human polymorphism experiment.

### 8th week:
**Lecture:** (21) Gene regulation in eukaryotes I. (22) Gene regulation in eukaryotes II. (23) Homologous and specific recombination.
**Practical:** Seminar: Gene structure and function.

### 9th week:
**Lecture:** (24) IS elements, transposons. (25) Gene engineering (Recombinant DNA) I. (26) Gene engineering (Recombinant DNA) II.
**Practical:** Seminar: Mutation and polymorphisms.

### 10th week:
**Lecture:** (27) Application of recombinant DNA in biotechnology and biomedical sciences I. (28) Application of recombinant DNA in biotechnology and biomedical sciences II.
**Practical:** Seminar: Gene regulation, operons.
**Self Control Test (2nd self-control test in extra time.)**

### 11th week:
**Lecture:** (29) Pharmacogenetics, pharmacogenomics. (30) Ecogenetics and ecogenomics. Genetic polymorphism of human populations.
**Practical:** Complementation test. The gene concept.

### 12th week:
**Lecture:** (31) Molecular genetics of the cell cycle. Cancer genetics. (32) Developmental genetics.
**Practical:** Transformation of Escherichia coli.

### 13th week:
**Lecture:** (33) Population genetics I. (34) Population genetics II.
**Practical:** Seminar: Bacterial genetics.

### 14th week:
**Lecture:** (35) Genomics, proteomics, the human genome project.
**Practical:** Seminar: Gene regulation in eukaryotes.
**Self Control Test (3rd self-control test in extra time.)**

### 15th week:
**Practical:** Seminar: Recombinant DNA.
Requirements

The prerequisite of Pharmaceutical Biology II. (second semester subject) is Pharmaceutical Biology I. (first semester subject). Students are not allowed to register until they have a successful ESE in Pharmaceutical Biology I.

Conditions of signing the lecture book:

1. Attendance

   Concerning attendance, the rules laid out in the EER of the University are clear. The presence of students at laboratory practices and seminars is obligatory and will be recorded. The professor refuses his/her signature in the student's Lecture Book for the semester's course-work in the case of over four weeks of absence, even if the student has an acceptable excuse. If the student is absent from more than two practices or seminars (taken together), the semester will be accepted only if they pass an examination based on the material covered by the laboratory classes and seminars of the semester (lab test).

   Successful accomplishment of the laboratory practices will be controlled by signing the laboratory notes. If 3 or more practices will not be accepted, the lecture book will not be signed. These students must sit for a written exam from the laboratory material.

   The presence of students on at least 50% of lectures is obligatory and will be recorded. The professor refuses his/her signature in the student's Lecture Book for the semester's course-work if the student was absent from more than 17 lectures, even if the student has an acceptable excuse.

2. Self-control tests

   During the semesters there will be 3 self control tests offered. Participation in at least two of them is required for the signature.

Exemption requests:

Applications for exemption (based on previous studies in other universities) should be submitted during the first two weeks of the semester. Requests are not accepted after that deadline! Exemption is granted only, if the student can pass an "Assessment of knowledge" test. The passing limit is 50%.

Rules concerning repeaters:

Attendance of labs and seminars for those repeaters who have a signed lecture book from the previous year (i.e. they failed, or they are repeaters because they have never taken Pharmaceutical Biology II. exam) is dispensable. Students should register for the subject electronically during the first weeks of the semester. They can take the three midterm tests in order to qualify for test bonuses and they take the regular exam at the end of the semester. They cannot have home-work bonuses. Students, who did not earn a signature in the previous year, have to register and attend the labs and seminars and they are considered as the other students registering the course at the first time.

Final Examination (FE):

There will be a written examination at the end of the semester which covers all the material of the two semesters taken in the lectures, seminars, and laboratory practices (for a detailed list see the University Bulletin). The examination questions include multiple choice, and short essay questions, figures, definitions, etc. The marks are based on the student's performance, expressed in percentage (%) as shown in the table below:
The percentage values include the student's performance at the FE as well as the bonus percentage they have obtained by taking the three mid-semester tests. The following table shows the bonus percentage based on the average result of the semester tests. Absence counts as 0%.

<table>
<thead>
<tr>
<th>Average of the 3 tests (%)</th>
<th>Bonus (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>50.00 - 53.99</td>
<td>1</td>
</tr>
<tr>
<td>54.00 - 57.99</td>
<td>2</td>
</tr>
<tr>
<td>58.00 - 61.99</td>
<td>3</td>
</tr>
<tr>
<td>62.00 - 65.99</td>
<td>4</td>
</tr>
<tr>
<td>66.00 - 69.99</td>
<td>5</td>
</tr>
<tr>
<td>70.00 - 73.99</td>
<td>6</td>
</tr>
<tr>
<td>74.00 - 77.99</td>
<td>7</td>
</tr>
<tr>
<td>78.00 - 81.99</td>
<td>8</td>
</tr>
<tr>
<td>82.00 - 85.99</td>
<td>9</td>
</tr>
<tr>
<td>86.00 - 100</td>
<td>10</td>
</tr>
</tbody>
</table>

Further bonuses can be given for the timely completion of the following midterm homeworks:

- Problem solving in genetics (2 bonuses)
- Analysis of human karyograms (1 bonus)
- Data search in human genetic databanks through the Internet (1 bonus)

Maximum number of the bonuses in the second semester is 14. Bonuses are calculated only in the year of acquisition.

FE includes cell biology (Pharmaceutical Biology I.) and genetics & molecular biology (Pharmaceutical Biology II). Those students, who ask in advance to have their ESE mark in Pharmaceutical Biology I. to be considered as a part of their grade on the FE will be exempted from cell biology. They have to take examination only in genetics & molecular biology. However, this examination includes the following topics from the first semester: DNA, chromatin, chromosomes, nucleus, cell cycle and cell division of eukaryotes and prokaryotes, since these are topics covered by genetics, as well. In this case the final grade of the FE is calculated as the average of the results of the ESE and the genetics exam taken at the end of the second semester. None of the grades can be fail (1) and in dubious cases the result of the genetics exam is accounted more.

The slides of the lectures and up-to-date information can be found at https://elearning.med.unideb.hu, username and password is your network-id (same as Neptun-id)
and password. You will be able to check the content after the Neptun has registered you to the subject.

Department of Inorganic and Analytical Chemistry

Subject: **INORGANIC AND QUALITATIVE ANALYTICAL CHEMISTRY PRACTICE**
Year, Semester: 1st year/2nd semester
Number of teaching hours:
Seminar: 15
Practical: 75

1st week:

2nd week:

3rd week:

4th week:

5th week:
**Practical:** Practical classification of reactions and ions. The reactions of anions: The analysis of anion group I (Carbonate, hydrogen carbonate, silicate, sulfide, polysulfide and sulfite ions). Identification of haloanion ions. Purity tests: Investigation of bromate impurity in KBr.

6th week:
**Practical:** Identification of bromide and iodide ions coexisting in solution with the use of chlorine water. Identification of chloride ion in the presence of bromide or/and iodide (Berg's reaction). Unknown sample: Detection of two anions of group I-III in a solution of two alkali metal salts (CO32- ; HCO3- ; S2- ; SO32- ; SO42- ; PO43- (HPO42- ; H2PO4-); F- ; BrO3- ; IO3--). Voluntary test: The same as unknown sample, but solution is given.
CHAPTER 16

7th week:
**Practical:** Identification of bromide and iodide ions coexisting in solution with the use of chlorine water. Identification of chloride ion in the presence of bromide or and iodide (Berg's reaction). Unknown sample: Detection of two anions of group I-III in a solution of two alkali metal salts (CO32-; S2-; SO32-; SO42-; PO43-(HPO42-; H2PO4-); F-; BrO3-; IO3-; Cl-; Br-; I-; SO32- and SO42- ions do not co-exist). Voluntary test: Detection of one or two anions of group I-III in a solution of two alkali metal salts (CO32-; S2-; SO32-; SO42-; PO43-(HPO42-; H2PO4-); F-; BrO3-; IO3-; Cl-; Br-; I-; SO32- and SO42- ions do not co-exist).

8th week:
**Practical:** The analysis of anion group IV (nitrite, nitrate and chloride ions). Detection of nitrite and nitrate ions with Griess-Ilosvay reagent. Unknown sample: Detection of two anions of group IV in a mixture of two alkali metal salts (CO32-; S2-; SO32-; SO42-; PO43-(HPO42-; H2PO4-); F-; BrO3-; IO3-; Cl-; Br-; I-; NO2- and NO3-). The pairs of: SO32- - SO42-; Br- - NO3- and I- - NO3- are not given.) Voluntary test: The same as unknown sample, but solution is given.

9th week:
**Practical:** The reactions of cations. The analysis of cation group I and group IIA (Copper(II), silver(I), cadmium(II), mercury(I), mercury(II), lead(II) and bismuth(III) ions). Purity tests: Investigation of lead impurity in boric acid.

10th week:
**Practical:** Sanger - Black's test for trace analysis of arsenic impurity in solution (demonstration). Purity test: Investigation of silver impurity in "bismuth subnitrate, heavy". Unknown sample: Detection of two cations of group I or IIA in a solution (Ag+; Cd2+; Hg22+; Hg2+; Pb2+; Bi(III) (Hg22+ - Hg2+ and Cu2+ - Hg22+ ions are not given together)) Voluntary test: Detection of one or two cations of group I and IIA in solution (Hg22+ - Hg2+ and Cu2+ - Hg22+ ions are not given together).

11th week:
**Practical:** The analysis of cation group IIB (Arsenic(III), arsenic(V), antimony(III), antimony(V), tin(II) and tin(IV). Reactions of permanganate, chromate and dichromate ions. Oxidation states of transition metals belonging to 3d row in aqueous solutions. Use of organic reactions in analysis. Purity test: Investigation of iron impurity in citric acid.

12th week:
**Practical:** The analysis of cation group III: (Nickel(II), cobalt(II), iron(II), iron(III), manganese(II), chromium(III), zinc(II) and aluminium(III) ions). "Fluoride test" for aluminium (demonstration). Detection of traces of nickel in cobalt salts. Preparation and properties of cyanide complexes of some transition metal ions. Unknown sample: Detection of two cations of group III in solution (The oxidation state of Fe and Cr can be +3, and the oxidation state of Mn can be +2 only). Voluntary test: Detection of one or two cations of group III in solution (The oxidation state of Fe and Cr can be +3, and the oxidation state of Mn can be +2 only).

13th week:
**Practical:** The analysis of cation group IV (calcium(II), strontium(II) and barium(II) ions). The analysis of cation group V (magnesium(II), lithium(I), sodium(I), potassium(I) and ammonium ions). Detection of traces of ammonia (demonstration). Reaction of Sr2+ and Ba2+ ions with sodium rhodizionate Salts of alkali metal ions with poor solubility of water. Unknown sample: Detection of two cations of group I, IIA, III, IV or V in solution (One component is a cation of group I, IIA or III (Cu2+; Ag+; Cd2+; Hg22+; Hg2+; Pb2+; Bi(III); Ni2+; Co2+; Fe2+; Fe3+; Mn2+; Cr3+; Zn2+; Al3+) and the other one is a cation of group IV or V (Ca2+; Sr2+; Ba2+; Li+; Na+; K+; NH4+).. The oxidation state of Cr is +3, and the oxidation state of Mn is +2. Fe can be in oxidation state +2 or +3). Voluntary test: The same as the unknown sample (solution is given).
14th week:
**Practical:** Summary on group reactions.
Complete qualitative analysis of a solid sample. 
Unknown sample: Complete qualitative analysis (cations, anions) of a solid mixture of two components. The cations or the anions in the two components are the same. This way the number of the detectable ions is 3. The same cations can be in the sample which were investigated formerly (Cu^2+; Ag+; Cd^2+; Hg^2+; Pb^2+; Bi(III); Ni^2+; Co^2+; Fe^3+; Mn^2+; Cr^3+; Zn^2+; Al^3+; Ca^2+; Sr^2+; Ba^2+; Li+; Na+; K+; NH_4^+), but Mg^2+ is not given, and also two cations of group IV and of group V cannot be together. The oxidation state of Hg, and Mn can be +2 only, oxidation state of Fe and Cr can be +3. The possible anions are as follows: CO_3^{2-} (HCO_3^-); SO_4^{2-}; PO_4^{3-} (HPO_4^{2-}; H_2PO_4^-); F^-; Cl^-; Br^-; I^-; NO_3^- The various protonated forms of the anions cannot be identified. Inventory and return of laboratory equipment.

**Requirements**

The laboratory course of 84 hours consists of seminars (1 class hours per week) and laboratory practices (5 hours per week). The course is given during 14 weeks. In the seminars the theoretical background of the laboratory investigations and some special or particular problems of analytical operations of the current experiments are discussed. The practices help students to get knowledge of material and to have training in the qualitative analytical laboratory operations and in compilation of laboratory reports. In the first four practices some experiments and test tube reactions relating mostly to inorganic chemistry are required to perform. From Practice 5 the sequence of the analytical topics follows the classical Fresenius' system. In the first part of the practices it is required to obtain some skills and experiences in the identification and separation of the relevant species. This work is followed by the analysis of "unknown samples". Sometimes special experiments are performed collectively by small teams (team study). The demonstration experiments are similar. In these cases the experiments are supervised by the teacher. Some purity tests were taken from the official European Pharmacopoeia or Hungarian Pharmacopoeia. Students who finish the actual practice sooner can analyse an extra "voluntary test", too. At the beginning of every practice the students are required to write a test relating to the theoretical background and practical questions of the current experiments. For these tests and for the analysis of unknown samples, grades are given. The purity tests are qualified as "acceptable" or "not acceptable". The final qualification is determined by the grades and by the quality of the laboratory reports. Depending on the qualification of purity tests and the volume of voluntary tests, the final grade can be rounded.

---

**Subject:** **INORGANIC AND QUALITATIVE ANALYTICAL CHEMISTRY THEORY**

Year, Semester: 1st year/2nd semester

Number of teaching hours:
Lecture: 45

1st week:
2nd week:

3rd week:

4th week:

5th week:
Lecture: Boron, aluminium, gallium, indium and thallium (Group 13). Atomic and physical properties, distribution, chemical properties of the elements. Structure and chemical properties of EX3 compounds. 3-centre bonding. Boron hydrides, binary and ternary hydrides of Al. Oxides and related compounds. Production and uses of the elements.

6th week:

7th week:
Lecture: Systematic analysis of cations. The Fresenius system. Reactions and separation of Group 1A and 1B cations: Ag(I), Pb(II), Hg(I), Cu(II), Hg(II), Bi(III), Cd(II). Reactions and separation of Group 2 cations (anions of semimetals): As(III), As(V), Sb(III) and Sb(V), Sn(II) and Sn(IV). Reactions and separation of Group 3 cations: Ni(II), Co(II), Fe(II), Fe(III), Mn(II), Cr(III), Al(III) and Zn(II). Reactions and separation of Group 4 cations: Ca(II), Sr(II) and Ba(II). Reactions of Group 5 cations: sodium-, potassium-, and lithium ions, Mg(II) and ammonium ions. Complete analysis of cations. Separation methods in the qualitative analysis.

CHAPTER 16

Department of Organic Chemistry

Subject: **ORGANIC CHEMISTRY PRACTICE I.**
Year, Semester: 1st year/2nd semester
Number of teaching hours:
Seminar: 14
Practical: 42

1st week:
**Seminar:** Receiving of laboratory equipments, safety education. Crystallization from water and organic solvent. Controlling of purity by thin-layer chromatography (TLC), and determination of melting point. Filling in of laboratory notes.
**Practical:** Receiving of laboratory equipments, safety education. Crystallization from water and organic solvent. Controlling of purity by thin-layer chromatography (TLC), and determination of melting point. Filling in of laboratory notes.

2nd week:
**Seminar:** Isolation of nicotine from tobacco leaves. Isolation of piperine from black pepper. Vacuum and simple distillation. Filling in of laboratory notes.
**Practical:** Isolation of nicotine from tobacco leaves. Isolation of piperine from black pepper. Vacuum and simple distillation. Filling in of laboratory notes.

3rd week:
**Seminar:** Isolation of caffeine from tea leaves. Separation of organic compounds with liquid-liquid extraction. Filling in of laboratory notes.
**Practical:** Isolation of caffeine from tea leaves. Separation of organic compounds with liquid-liquid extraction. Filling in of laboratory notes.

4th week:
**Seminar:** Separation of acetanilide and m-dinitrobenzene by column chromatography. Identification of hydrocarbons. Filling in of laboratory notes.
**Practical:** Separation of acetanilide and m-dinitrobenzene by column chromatography. Identification of hydrocarbons. Filling in of laboratory notes.

5th week:
**Seminar:** Identification of organic halides. Preparation and purification of terc-butyl-chloride. Filling in of laboratory notes.
**Practical:** Identification of organic halides. Preparation and purification of terc-butyl-chloride. Filling in of laboratory notes. Deposite the laboratory equipments.

Requirements

Conditions on signing the lecture book: The laboratory work is evaluated by a five-level practical grade.
Prerequisite: General Chemistry Theory and Practice.
The Organic Chemistry Seminar and Laboratory Practice will be kept in three groups. Each group will exercise for 5 weeks.

Subject: **ORGANIC CHEMISTRY THEORY I.**
Year, Semester: 1st year/2nd semester
Number of teaching hours:
Lecture: 60
1st week:
Lecture: History of organic chemistry. Description of hetero- and homonuclear bonds of organic compounds.

2nd week:
Lecture: MO and VB theory of the chemical bond.

3rd week:

4th week:
Lecture: Classification of organic reaction. Reaction mechanism. Relationship between structure and physical properties.

5th week:

6th week:
Lecture: Structure and isomerism of alkanes and cycloalkanes. Steroids.
Self Control Test

7th week:
Lecture: Preparations and reactions of alkanes and cycloalkanes.

8th week:
Lecture: Characterization of alkenes, their reactions and preparations.

9th week:
Lecture: Characterization of dienes, polienes, allylic compounds and their reactions and preparations.

10th week:
Lecture: Characterization of alkynes, their preparations and reactions. Classification of aromatic compounds.

11th week:
Lecture: Definition of aromaticity, reactions of aromatic compounds. Theory of aromatic electrophilic substitution.

12th week:
Lecture: Effect of substituent on electrophilic aromatic substitution.

13th week:
Lecture: Policyclic aromatic compounds.

14th week:
Lecture: Properties, synthesis and preparation of alkyl halides.

15th week:
Lecture: Nucleophilic substitution and elimination of alkyl halides.

**Requirements**

Lecture = terminal examination.

### Requirements

The seminars are compulsory. The semester is closed with written examination. The examination
contains theoretical material as well as problems from those solved in the seminars. The prerequisite of the examination is the successful completion of the seminars.

## Division of Biophysics

**Subject:** BIOPHYSICS  
**Year, Semester:** 1st year/2nd semester  
**Number of teaching hours:**  
- **Lecture:** 15  
- **Seminar:** 13  
- **Practical:** 16

### 1st week:
- **Lecture:** Introduction to the course. Generation and absorption of X-rays. X-ray contrast materials.  
- **Practical:** Introduction.

### 2nd week:
- **Lecture:** Fluorescence spectroscopy, fluorescence techniques.  
- **Practical:** Practices are performed in subgroups of 4-5 students in a rotary system.

### 3rd week:
- **Lecture:** Lasers and their biomedical applications. Photodynamic therapy.  
- **Practical:** Introduction.

### 4th week:
- **Lecture:** Optical and electron microscopy.  
- **Practical:** Practices are performed in subgroups of 4-5 students in a rotary system.  
  - For subgroup assignment, please see your lab teacher.  
  - P1: Determination of diffusion constant  
  - P2: Computed tomography Measurement of nuclear radiation  
  - P3: Determination of diffusion constant  
  - P4: Refractometry  
  - P5: Light microscopy Optical measurements

### 5th week:
- **Lecture:** Ionizing radiations and their interaction with materials. Dosimetry, tissue effects, detection of radiation  
- **Practical:** Practices are performed in subgroups of 4-5 students in a rotary system.

### 6th week:
- **Lecture:** Research, diagnostic and therapeutic application of stable and radioactive isotopes. Contrast materials, radipharmacons.  
- **Practical:** Practical exam.

### 7th week:
- **Lecture:** Medical imaging (CT, PET, SPECT, MRI).  
- **Seminar:** S1: Biostatistics. Probability theory.  
- **Practical:** Practices are performed in subgroups of 4-5 students in a rotary system.

### 8th week:
- **Lecture:** Diffusion at the molecular level, statistical interpretation. Fick's 1st law.  
  - Thermodiffusion. Osmosis  
- **Seminar:** S2: Biostatistics. Random variable.  
  - Cumulative distribution function, distribution function of random variable. Mean, standard deviation.  
- **Practical:** Practices are performed in subgroups of 4-5 students in a rotary system.

### 9th week:
- **Lecture:** Origin of membrane potential. Resting potential, action potential, electric excitibility.  
- **Seminar:** S3: Biostatistics. Discrete probability distributions: binomial and Poisson-distribution.  
- **Practical:** Spare lab

### 10th week:
- **Lecture:** Origin of membrane potential. Resting potential, action potential, electric excitibility.  
- **Seminar:** S4: Biostatistics. Continuous probability distribution. Normal distribution.  
  - Standard normal distribution. Sampling.  
- **Practical:** Practical exam.
11th week:
Lecture: Pharmacology of ion channels (gating, selectivity). Patch clamp technique.

12th week:

13th week:
Lecture: Biophysics of drug delivery.

14th week:
Lecture: Methods of pharmacological research. Gelectrophoresis, isoelectric focussing, blotting. Detecting molecular interactions (SPR, FCS, FRET)
Seminar: Biophysics: Consultation

15th week:
Lecture: Consultation. Preparation for the exam.

Requirements

Compulsory reading:
Educational material published on the web page of the Department. (lecture materials, description of lab practicals)

Condition for signing the lecture book
- All labs done (1 spare lab available for make-up)
- Lab exam attended (no make-up possible)
- Minimally 5 out of 6 biostatistics seminars attended (no make-up possible)
- Signing up for the electronic course PHARM-Biophys at the exam.unideb.hu website by the end of week 3 (the site can only be reached from inside the University network)
- Lectures are officially not compulsory, but heartily recommended

Exams and grading
- Lab exam (see the actual timetable) – 10 points max
- Final exam in biostatistics (week 13) – 20 points max
- Exemption test (electronic) in biophysics (week 15), or written exam(electronic) in final exam - 70 points max
- Total: 100 points. Grades:
  - 50< pass (2)
  - 60< satisfactory (3)
  - 70< good (4)
  - 80< excellent (5)
- Please note that your work during the semester constitutes a compulsory part of your final score, which cannot be changed during the exam period, so take your studies seriously throughout the semester.
No exam course will be offered for this subject.
Repeaters
Those who have obtained a signature for the subject earlier are exempted from attending the labs and the biostatistics seminars. Those exempted can choose to keep their scores from last year, or to take the exams together with the rest of the class during the semester. The decision has to be made before the end of the 3rd week of education, and the study advisor at biophysedu@med.unideb.hu notified about it. If you do not write, we automatically assume that you keep last year's score, and no changes to this will be possible. Biostatistics and Lab exemptions, scores, exams, etc are independent from each other.
CHAPTER 17
ACADEMIC PROGRAM FOR THE 2ND YEAR

Department of Foreign Languages

Subject: HUNGARIAN LANGUAGE II/1.
Year, Semester: 2nd year/1st semester
Number of teaching hours:
Practical: 30

1st week:
Practical: 1. fejezet: Emlékszik?

2nd week:
Practical: 1. fejezet: Emlékszik? / Tegezés - Önözés

3rd week:
Practical: 2. fejezet: Tegezés - Önözés

4th week:
Practical: 3. fejezet: Élelmiszerek 1.

5th week:

6th week:
Practical: 5. fejezet: Étkezések, étteremben 1.

7th week:

8th week:
Practical: 7. fejezet: Összefoglalás, midterm test

9th week:

10th week:

11th week:

12th week:

13th week:
Practical: 12. fejezet: Összefoglalás

14th week:
Practical: 13. fejezet: Preparing for the oral exam, endterm test

15th week:
Practical: Oral exam

Requirements

Attendance
Attending language classes is compulsory. Students should not be absent from more than 10 percent of the classes. If a student is late it is considered as an absence. If a student misses more than two occasions, the final signature may be refused and the student must repeat the course.
Absentees can make up the missed classes in the same week. Maximum one language class may be made up with another group. Students have to ask for the teacher's written permission (by e-mail) 24 hours in advance. Students can attend any class (make up or regular) only if they take their coursebook with them.
The teacher evaluates active participation in each class. Students are not supposed to share coursebooks in the classes therefore if they fail to bring the coursebook to the class for the second
time the attendance is refused.

**Testing, evaluation**

In each Hungarian language course, students must sit for 2 written language tests and an oral exam. A further minimum requirement is the knowledge of 200 words per semester divided into 10 word quizzes. There are five word quizzes before and another five after the midterm test. If students fail or miss any word quizzes they cannot start their written test and have to take a vocabulary exam that includes all 100 words before the midterm and end term tests. A word quiz can be postponed by a week and students can take it only with their own teacher. Students can get bonus points (5-5%) by taking two extra quizzes containing 20 sentences each before the midterm and end term tests. The sentences are taken from the units of the coursebook.

The oral exam consists of a role-play from a list of situations covered in the coursebook. If students fail the oral exam, they fail the whole course. The results of the written tests and the oral exam are combined and averaged.

Based on the final score the grades are given as follows.

<table>
<thead>
<tr>
<th>Final score</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-59</td>
<td>fail (1)</td>
</tr>
<tr>
<td>60-69</td>
<td>pass (2)</td>
</tr>
<tr>
<td>70-79</td>
<td>satisfactory (3)</td>
</tr>
<tr>
<td>80-89</td>
<td>good (4)</td>
</tr>
<tr>
<td>90-100</td>
<td>excellent (5)</td>
</tr>
</tbody>
</table>

If the final score of the written tests is below 60, the student can take a written remedial exam once covering the whole semester’s material.

**Course book:** See the website of the Department of Foreign Languages: [ilekt.med.unideb.hu](http://ilekt.med.unideb.hu)

Audio files to the course book, oral exam topics and vocabulary minimum lists are also available on the website.

---

**Department of Inorganic and Analytical Chemistry**

Subject: **PHARMACEUTICAL BIOCHEMISTRY I.**

Year, Semester: 2nd year/1st semester

Number of teaching hours:

- Lecture: **40**
- Practical: **5**

**1st week:**

**Practical:** Kinetic studies on beta-glucosidase from sweet almond.

**2nd week:**

**3rd week:**

**Lecture:** Carbohydrates. Biological role of

4th week:

5th week:

6th week:

7th week:

8th week:

9th week:
Lecture: Citric acid cycle. Pyruvate dehydrogenase complex. The citric acid cycle is a source of biosynthetic precursors. Control of the citric acid cycle. The glyoxylate cycle.

10th week:

11th week:

12th week:

13th week:

14th week:

15th week:
Lecture: Digestion of nucleic acids Catabolism of purines and pirimidines. Disorders in the metabolism. One-carbon groups carried by tetrahydrofolate. Biological methylations. Practical: Kinetic studies on α-glucosidase from sweet almond.

Requirements
Detailed instructions will be given on the first lecture.
Subject: QUANTITATIVE ANALYTICAL CHEMISTRY THEORY I.
Year, Semester: 2nd year/1st semester
Number of teaching hours:
Lecture: 45
Seminar: 15

1st week:

2nd week:

3rd week:
Lecture: Acidimetric and alkalimetric titrations: titration curves and their calculations, factors influencing the shape of the titration curves, endpoint, equivalence point, methods of endpoint indication (Gran function and its applications). Applications of acid-base titrations.

4th week:
Lecture: Complex formation equilibria. Basic concepts: stepwise equilibrium, equilibrium constants, concentration distribution curves, simultaneous equilibria influencing complexometric reactions, conditional stability constant, chelate effect.

5th week:
Lecture: Complexometric titrations: titration curves and their calculations, factors influencing the shape of the titration curves, indication in complexometry, selective complex formation reactions. Applications of complexometric titrations.

6th week:
Lecture: Precipitation equilibria: Basic concepts: solubility, solubility product, factors influencing the solubility (the common ion effect, temperature effect, solvent effect, effects of simultaneous solution equilibria: protonation/hydrolysis or complex formation). Titration based on precipitate formation: titration curves and their calculations, shape of titration curves, endpoint indication. Practical applications (argentometry).
Seminar: Practice, consultation.

7th week:
Lecture: Equilibria of redox systems: Basic concepts: redox potential, Nernst equation, equilibrium redox potential, equilibrium constant and redox potential, factors influencing the redox potential. Redox titrations (oxidimetry, reductometry): titration curves and their calculations, shape of titration curves, practical applications (permanganometry, chromatometry, bromatometry, iodometry).
Seminar: Test I.

8th week:
Seminar: Complex formation equilibria. The concept and calculation of conditional stability constants. Calculations connected to complexometric titration methods.

9th week:
Lecture: Chromatographic methods: Basic concepts: classification, separation techniques, chromatographic process (HETP, number of theoretical plates, basic equation of chromatography, peak broadening, van Deemter equation, resolution and its optimization), characteristic values of a chromatogram (retention parameters, quantitative evaluation methods).
Seminar: Complex formation equilibria. The concept and calculation of conditional stability constants. Calculations connected to complexometric titration methods.

10th week:

Electrophoresis: slab gel electrophoresis and capillary electrophoresis.

11th week:
Lecture: Basic concepts: signal, noise, sensitivity, limit of detection, reproducibility, accuracy, precision, calibration, signal to noise ratio, basics of error calculation. Discarding questionable data points. Q-test, t-test. GLP, GMP.

12th week:

13th week:
ACADEMIC PROGRAM FOR THE 2ND YEAR

14th week:
Seminar: Practice, consultation.

15th week:
Lecture: Direct potentiometry. Potentiometric titration Field effect transistors as chemical sensors Conductometry. Direct and indirect conductometry.
Seminar: Test II.

Requirements

Minimum requirements:
The sum of scores from the two tests must be at least 41 points out of 100 to pass, otherwise test III must be taken or a short pre-exam admission test must be written before beginning the main exam in Quantitative analytical chemistry I. A sum of scores for the two tests of at least 85 % guarantees an improvement of +1 on exam grades except for a 'fail' grade.

Department of Organic Chemistry

Subject: ORGANIC CHEMISTRY PRACTICE II.
Year, Semester: 2nd year/1st semester
Number of teaching hours:
Practical: 60

1st week:
Practical: Receiving of laboratory equipments. Safety educations. Repetition: crystallization from methanol and water, filtration, TLC, determination of melting point.

2nd week:
Practical: Isolation of Carvone from caraway. Steam distillation. Separation of benzoic acid and benzanilide by liquid-liquid extraction.

3rd week:

4th week:
Practical: Preparation of 1,3-Dinitrobenzene. Preparation of iodoform.

5th week:

6th week:

7th week:
Practical: Identification of oxo derivatives of hydrocarbons. Identification of unknown compounds. Preparation of cyclohexanone-2,4-dinitrophenylhidrazone.

8th week:
Practical: Preparation of Benzoic acid and N-benzoyl-glycine.

9th week:
Practical: Preparation of 2,3-diphenyl-quinoxaline and 2,6-dibenzylidene-cyclohexanone.

10th week:
Practical: Isolation and saponification of the glyceride of nutmeg.
CHAPTER 17

11th week:

12th week:
Practical: Test tube reaction of amino acids and proteins.

13th week:
Practical: Complex test: Identification of unknown compounds.

14th week:
Practical: Preparation of O-Acetyl-salicylic acid, complex chromatography.

15th week:
Practical: Deposite the laboratory equipments. Assessment of laboratory.

Requirements

Compulsory literature:
The hand-out provided by the leader of the laboratory practice.

Suggested Reading:
The hand-out of the lecture of organic chemistry II as well as its compulsory and suggested literature.

Conditions on signing the lecture book:
The laboratory work is evaluated by a five-level practical grade.

Subject: ORGANIC CHEMISTRY THEORY II.
Year, Semester: 2nd year/1st semester
Number of teaching hours:
Lecture: 60

1st week:
Lecture: Classifications and bond structure of alcohols, phenols and ethers. Preparation of alcohols, ethers and their thio analogues.

2nd week:
Lecture: Reactions of alcohols, ethers and their thio analogues.

3rd week:
Lecture: Preparations and reactions of phenols and their thio analogues.

4th week:
Lecture: Characterization, reactions and preparations of amines.

5th week:
Lecture: Preparations and reactions of nitro, diazo derivatives and diazonium salts.

6th week:

7th week:
Lecture: Classification, description and reactivity of mono- and dicarboxylic acids and their derivatives.

8th week:
Lecture: Nucleophilic substitution on acyl carbon, preparation and transformation of carboxylic acid and its derivatives.

9th week:
10th week:

11th week:
Lecture: Reactions of carbohydrates, synthesis of di- and polisaccharides.

12th week:
Lecture: Heterocyclic compounds, heteroaromatic systems. Three-, four- and five-membered heterocycles with one heteroatom. Beta-lactam antibiotics.

13th week:
Lecture: Compounds with porphyrin skeleton.

14th week:

15th week:
Lecture: Nucleosides, structures, preparations and transformations of nucleotides and nucleic acids.

Requirements
Terminal examination, comprehensive examination.

Department of Physical Chemistry

Subject: COLLOID AND SURFACE CHEMISTRY PRACTICE
Year, Semester: 2nd year/1st semester
Number of teaching hours:
Practical: 28

8th week:
Practical: 1. Rheological characterization of concentrated emulsions (creams).

9th week:

10th week:
Practical: 3. Polymer's relative molecular masses from viscosity measurements.

11th week:

12th week:
Practical: 5. Solubilization.

13th week:

14th week:
Practical: 7. Experiments on thixotropic or other anomalous fluids with a rotation viscometer

Requirements
Attendance on all practice is compulsory. Preparation of lab notebooks is necessary to get the signature. More detailed instructions will be given on the first lab course.
Subject: COLLOID AND SURFACE CHEMISTRY THEORY
Year, Semester: 2nd year/1st semester
Number of teaching hours:
Lecture: 28

1st week:
Lecture: "A": A subject of colloid and surface chemistry. Classification of the dispersed systems. Type of colloids. Typical everyday colloids. Preparation of colloids. The basic characteristics of colloid systems: dispersity, morphology, spatial distribution, interparticle interactions, normal distribution. Thermodynamic and kinetic stability.
"B": Molecular interactions. Attraction forces: ion-ion, ion-dipole, dipole-dipole, dispersion interactions. Hydrogen bonds, hydrophobic interactions.

2nd week:

3rd week:

4th week:

5th week:

6th week:

7th week:
### ACADEMIC PROGRAM FOR THE 2ND YEAR

| --- |

### Requirements

Attendance on the lectures is highly recommended. The evaluation is based on the total score of a written test, 50% is necessary to pass. More detailed information will be presented on the first lecture.

**Subject:** PHYSICAL CHEMISTRY II.  
Year, Semester: 2nd year/1st semester  
Number of teaching hours:  
Practical: 30

<table>
<thead>
<tr>
<th>1st week:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Practical:</strong> One of the following topics: Measuring the concentration of a coloured solute by spectrophotometry or determination of thermodynamic quantities by calorimetry or electrochemistry.</td>

<th>7th week:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Practical:</strong> One of the following topics: Redox potentials from potentiometric titrations. Determination of activity coefficient for concentration galvanic cell.</td>
<td></td>
</tr>
</tbody>
</table>

### Requirements

The measurements and knowledge of the associated theory are graded and an overall mark will be given.
Safety training is mandatory before the first lab practice. Everybody should work and do the measurement individually according to the pre-set schedule (it will be provided prior to the first lab. The laboratory practices are 4-hrs long. In accordance with the regulations of University of Debrecen, attendance is compulsory with the exception of health or family problems. In this case, the students should agree with the teacher on replacement dates for the missed experiments.

### Department of Physiology

**Subject:** HUMAN PHYSIOLOGY I.

**Year, Semester:** 2nd year/1st semester

**Number of teaching hours:**

- **Lecture:** 30
- **Seminar:** 15

<table>
<thead>
<tr>
<th>Week</th>
<th>Lecture</th>
<th>Topics</th>
</tr>
</thead>
</table>
| **1st week:** | **Lecture:** Introduction | Passive and active transport  
Resting membrane potential |
| **2nd week:** | **Lecture:** Ion channels  
The mechanism of action potential  
Basic receptor functions |
| **3rd week:** | **Lecture:** Cardiac action potential  
ECG  
Excitation-contraction coupling in cardiac muscle |
| **4th week:** | **Lecture:** Contractile properties of the heart  
The cardiac output and the cardiac cycle  
Humoral and the autonomic control of cardiac function |
| **5th week:** | **Lecture:** Physiology of synapse and neuromuscular junction  
Skeletal muscle  
Smooth muscle |
| **6th week:** | **Lecture:** Test I. |
| **7th week:** | **Lecture:** Physiology of the body fluids, red blood cells  
Blood types, plasma, hemostasis, jaundice |
| **8th week:** | **Lecture:** General properties of circulation  
Arterial circulation  
Microcirculation, venous circulation |
| **9th week:** | **Lecture:** Cardiovascular reflexes  
Humoral control of cardiovascular function  
Central control of cardiovascular function |
| **10th week:** | **Lecture:** Cerebral- and coronary circulation  
Splanchnic, cutaneous and muscular circulation  
Cardiovascular shock |
| **11th week:** | **Lecture:** Pulmonary circulation  
Mechanics of respiration  
Compliance, work of breathing |
| **12th week:** | **Lecture:** Gas transport in the blood  
Central control of breathing |
| **13th week:** | **Lecture:** Test II. |
Requirements

1. Signature of Lecture Book
Attendance of the lectures and seminars are compulsory. The signature of the Lecture Book may be refused for the semester if one has more than four absences from the seminars. Every student must attend seminars with the group appointed by the Educational Office. The program of the Human Physiology I lectures is listed at the web site of the Department of Physiology. For continuous updates on all education-related issues, please consult with the departmental web-site (http://PHYS.MED.UNIDEB.HU).

2. Evaluation during the semester (mid-semester tests)
The progress of students will be tested 2 times during the semester in the form of a written test (multiple choice questions). Participation on mid-semester written tests is compulsory.

3. Examination
The first semester is closed by an oral end-semester exam (ESE) covering the topics of all lectures and seminars of the semester. The list of exam questions is available on the departmental website (http://PHYS.MED.UNIDEB.HU). Students may be exempted for ESE if the average score of the two mid-semester tests is higher than 60%, and (s)he has fewer than 4 - 4 lecture and seminar absences. If all these conditions are met, the offered mark will be calculated according to the following table:

<table>
<thead>
<tr>
<th>Score</th>
<th>Mark</th>
</tr>
</thead>
<tbody>
<tr>
<td>60 – 69.9 %</td>
<td>pass (2)</td>
</tr>
<tr>
<td>70 – 79.9 %</td>
<td>satisfactory (3)</td>
</tr>
<tr>
<td>80 – 89.9 %</td>
<td>good (4)</td>
</tr>
<tr>
<td>90 – 100 %</td>
<td>excellent (5)</td>
</tr>
</tbody>
</table>

The student can refuse to accept the offered mark based on the results of mid-semester tests and choose to take ESE.

Division of Pharmacognosy

Subject: BOTANY PRACTICE
Year, Semester: 2nd year/1st semester
Number of teaching hours:
Practical: 30

1st week:
**Practical:** Structure of plant cells, Diagnostic plant cell constituents, Inclusions, Vacuoles, Staining plant cells (Neutral Red, Lugol Solution etc.), Plasmolysis of plant cells, Preparation of your own microscopic samples.

2nd week:
**Practical:** Epidermis studies, Stomata, Primary and secondary epidermis, Digitalis purpureae

3rd week:
**Practical:** Studies on vascular tissues, Xylem - Tracheas, Tracheides, Xylemparenchymas, Fiber cells, Types of thickening, Phloem - Sieve cells, Sieve tubes, Sieve plates, Companion cells, Albuminous cells, Types of Vascular Bundles, Veratri radix, Agrimo-niae herba, Calami rhizoma, Belladonae folium, Filicis maris rhyzoma.

4th week:
**Practical:** Tissues of Primary and Secondary Roots, Veratri radix, Valerianae radix, Primulae radix, Liquiritiae radix, Saponariae albae readix, Belladonae radix, Gentianae radix, Altheae radix.

5th week:
**Practical:** Tissues of Secondary roots, Ipecacuanhae radix, Ononidis radix, Ratanhae radix, Tissues of rhizomes, Graminis rhizoma, Veratri rhizoma, Rhei rhizoma.

6th week:
**Practical:** Tissues of Stems (Monocotyledonopsida, Dicotyledonopsida), Characterization of Cortex, Agrimoniae herba, Stem of Equisetum arvense, Chinae cortex, Frangula cortex, Cinnamoni cassiae Cinnamon ceylonici cortex, Quercus cortex.

7th week:
**Practical:** Tissues of leaves, Sennae folium, Absinthi folium, Uvae ursi folium, Belladonae folium, Stramonii folium, Hyoscyami folium, Calciumoxalate inclusions.

8th week:
**Practical:** Fruit studies, Foeniculi fructus, Carvi fructus, Anisi vulgaris fructus, Coni Auranti pericarpium, i fructus, Coriandri fructus, Juniperus galbulus, Fruits of Apiaceae.

9th week:
**Practical:** Seed studies, Tisseus of seeds, Lini semen, Strophanti semen, Sinapis nigrae semen, Strychni semen, Myrysticae semen, Stereomicroscopic studies on seeds, Identifying characters of drugs.

10th week:
**Practical:** Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Dicotyledonopsida, Ranunculaceae, Helleboraceae, Papaveraceae, Fumariaceae.

11th week:
**Practical:** Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Rosaceae, Fabaceae, Apiaceae, Brassicaceae.

12th week:
**Practical:** Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Apocynaceae, Rubiaceae, Boraginaceae,

13th week:
**Practical:** Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Lamiaceae, Solanaceae, Scrophulariaceae, Asteraceae.

14th week:
**Practical:** Characterization of Pharmaceutically important Families and Species of plants, Plant Identification, Monocotyledonopsida, Liliaceae, Poaceae.

15th week:
**Practical:** Oral and written test.

**Requirements**

Detailed information is given in the first practical course.
Subject: **BOTANY THEORY**
Year, Semester: 2nd year/1st semester
Number of teaching hours:
Lecture: 30

1st week:

2nd week:
Lecture: Anatomy of plant tissues, Meristems, Parenchymas, Collenchymas, Sclerenchymas, Epidermis (types of stomata), Vascular tissues, Ground tissues, Secretory tissues.

3rd week:
Lecture: Primary and Secondary plant body, Tissues of the Root and Stem, Xylem and Phloem, Function of Vascular Cambium. Organs Organizations of Root and Stem systems.

4th week:
Lecture: Primary and Secondary plant body, Tissues of Leaves and Reproductive Organs (anatomy of flowers), Organization of Leaves and Reproductive Organs, Plant Life Cycle, Gametophyte and Sporophyte, Sexual Reproduction of Plants, Double Fertilization and Pollination of Plants.

5th week:
Lecture: Inflorescens. Fruit Types (true and accessory fruits) and Seed Dispersal. Plant Embryo and Seed Anatomy, Development of Seeds, Types of Seedlings.

6th week:
Lecture: Classification and Systematic of Plants, Historical Aspects of Plant Classification, Artificial- versus Natural System of Classification, Levels of Taxonomic Categories, Phoenetic, Numeric- and Applied Taxonomy.

7th week:

8th week:
Lecture: Characterization of Gymnospermatophyta Plants and Pharmacetically Important Taxa and Species Characterization of Angiospermatophyta Plants and Pharmacetically Important Taxa and Species of the Taxon, Dicotyledonopsida, Orders and Families of Magnoliidae and Pharmacetically Important Species of the Taxa.

10th week:
Lecture: Monocotyledonopsida, Orders and Families of Liliidae and Pharmacetically Important Species.

11th week:
Lecture: Monocotyledonopsida, Orders and Families of Commelidinae and Pharmacetically Important Species of the Taxa.

12th week:
Lecture: Dicotyledonopsida, Orders and Families of Hamamelididae and Pharmacetically Important Species of the Taxa.

13th week:
Lecture: Dicotyledonopsida, Orders and Families of Dilleniidae and Pharmacetically Important Species of the Taxa.

14th week:
Lecture: Dicotyledonopsida, Orders and Families of Rosoidae and Pharmacetically Important Species of the Taxa.

15th week:
Lecture: Dicotyledonopsida, Orders and Families of Asteridae and Pharmacetically Important Species of the Taxa.
Requirements

Detailed information is given in the first lecture.

Department of Biochemistry and Molecular Biology

Subject: **PHARMACEUTICAL BIOCHEMISTRY II.**
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Lecture: 40
Practical: 5

1st week:

2nd week:

3rd week:

4th week:

5th week:
**Lecture:** Signal transduction I. Term and levels of regulation. Term and levels of regulation. Significance and interrelationship between metabolic, cytokine, hormonal and neuronal regulation. Forms of external signals. Receptors and transducers. Systems increasing the sensitivity of regulation: allosteria, substrate cycle, interconversion cycle, cascades.

6th week:
**Lecture:** Signal transduction II. Signalling pathways of nonpenetrating signals. Ionchannel receptors. Seven transmembrane domain receptors G proteins and GTP-ases. The adenylate cyclase and the phospholipase C signalling pathway. G proteins and GTP-ases. The adenylate cyclase and the phospholipase C signalling pathway. Control of enzyme activity. The NO system. Nuclear receptors.

7th week:
9th week:

**Self Control Test**

10th week:
**Lecture:** Biochemistry of the liver II. Biotransformation. Biochemical consequences of ethanol consumption.

11th week:
**Lecture:** Biochemistry of blood clotting I. Cellular, humoral and vascular aspects of blood clotting. Structure, activation, adhesion and aggregation of thrombocytes. Classification of blood clotting factors and their role. Factors depending on vitamin K.

12th week:

13th week:

14th week:

**Practical:** Enzymes of biotransformation.

**Self Control Test**

---

**Requirements**

**Requirements for signing the semester:** attendance in laboratory practice. Attendance on the lectures is not compulsory, but recommended: in case of two lecture absences, all points collected during the semester are erased. Please arrive in time for the lectures, because the door of the lecture hall will be closed at the beginning of the lectures. Repeaters can collect bonus points without visiting the lectures (if they attend on them previously).

There will be two written control tests during the semester, by which 2x50 points (max. 100 points) can be collected. Each control test consist of 20 test questions from the material of the lectures. According to the result of the control tests, students can collect bonus points: those students who reaches at least 50 points will get 5 bonus points, those who reaches 70 points will get 10 bonus points. Bonus points will be added to the result of the final written exam. Control tests are not obligatory.

There is one practice in this semester, on the 14th week, it is obligatory for every student. Those
students, who don’t attend the practice, can’t get signature for the semester. Practices are not obligatory for repeaters (if they did it previously).

The final „A”, „B” and „C” exams are written exams. On the exam 100 points can be collected by 40 test questions from the material of the Pharmaceutical Biochemistry lectures. Bonus points collected by the control tests during the semester will be added to this result. 60 % (60 points) is needed to get a passing mark, and the grade increases with every 10 points: 60-67.5 pass; 70-77.5 satisfactory; 80-87.5 good; 90-110 excellent. If a student fails the written „C” exam, department provides him/her a chance to prove his/her knowledge in an oral exam, in front of an examination committee. If the student passes this oral exam, he/she will be given a grade 2 (pass). The department will provide one examination date per week during the exam period.

Improvement exam:
One improvement exam can be taken during the exam period. We always count the better grade of the taken exams.

Please follow the announcements of the department on the announcement table (LSB downstairs), and on the homepage of the Department (http://bmbi.med.unideb.hu). Lecture slides can be downloaded from the elearning site of the Department (https://elearning.med.unideb.hu)

Department of Foreign Languages

Subject: HUNGARIAN LANGUAGE II/2.
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Practical: 30

1st week:
Practical: 1. fejezet.: Emlékszel?

2nd week:

3rd week:
Practical: 2. fejezet: Testrészek 2.

4th week:
Practical: 3. fejezet: Tünetek

5th week:
Practical: 4. fejezet: Gyógyszerek

6th week:
Practical: 5. fejezet: Klinikák és szakorvosok

7th week:
Practical: 6. fejezet: Lassítsunk egy kicsit!

8th week:
Practical: 7. fejezet: Összefoglalás , midterm test

9th week:
Practical: 8. fejezet: Szoktál kanapészörfölni?

10th week:
Practical: 9. fejezet: Jó és rossz szokások

11th week:
Practical: 10. fejezet: Instrukciók

12th week:
Practical: 11. fejezet: Tessék mondani!

13th week:
Practical: 12. fejezet: Anamnézis

14th week:
Practical: 13. fejezet: Összefoglalás / Preparing for the oral exam, end term test
15th week:
Practical: Oral exam

Requirements

Attendance
Attending language classes is compulsory. Students should not be absent from more than 10 percent of the classes. If a student is late it is considered as an absence. If a student misses more than two occasions, the final signature may be refused and the student must repeat the course.
Absentees can make up the missed classes in the same week. Maximum one language class may be made up with another group. Students have to ask for the teacher's written permission (by e-mail) 24 hours in advance. Students can attend any class (make up or regular) only if they take their coursebook with them.
The teacher evaluates active participation in each class. Students are not supposed to share coursebooks in the classes therefore if they fail to bring the coursebook to the class for the second time the attendance is refused.

Testing, evaluation
In each Hungarian language course, students must sit for 2 written language tests and an oral exam. A further minimum requirement is the knowledge of 200 words per semester divided into 10 word quizzes. There are five word quizzes before and another five after the midterm test. If students fail or miss any word quizzes they cannot start their written test and have to take a vocabulary exam that includes all 100 words before the midterm and end term tests. A word quiz can be postponed by a week and students can take it only with their own teacher. Students can get bonus points (5-5%) by taking two extra quizzes containing 20 sentences each before the midterm and end term tests. The sentences are taken from the units of the coursebook.
The oral exam consists of a role-play from a list of situations covered in the coursebook. If students fail the oral exam, they fail the whole course. The results of the written tests and the oral exam are combined and averaged.
Based on the final score the grades are given as follows.

<table>
<thead>
<tr>
<th>Final score</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-59</td>
<td>fail (1)</td>
</tr>
<tr>
<td>60-69</td>
<td>pass (2)</td>
</tr>
<tr>
<td>70-79</td>
<td>satisfactory (3)</td>
</tr>
<tr>
<td>80-89</td>
<td>good (4)</td>
</tr>
<tr>
<td>90-100</td>
<td>excellent (5)</td>
</tr>
</tbody>
</table>
If the final score of the written tests is below 60, the student can take a written remedial exam once covering the whole semester’s material.

Course book: See the website of the Department of Foreign Languages: ilekt.med.unideb.hu
Audio files to the course book, oral exam topics and vocabulary minimum lists are also available on the website.
Department of Inorganic and Analytical Chemistry

Subject: QUANTITATIVE ANALYTICAL CHEMISTRY PRACTICE II.
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Practical: 75

1st week:
Practical: Introduction to the Quantitative Analytical Chemistry Laboratory. Laboratory Safety Information. Preparation of 0.1 mol/dm³ HCl titrant (250 cm³). Review of lab equipment.

2nd week:
Practical: Determination of the exact concentration of the HCl titrant solution using KHCO₃ stock solution. Determination of HgO in a HgO-KCl mixture (unknown sample). Preparation of 0.1 mol/dm³ NaOH titrant by the Sörensen (500 cm³) and determination of its exact concentration. Determination of oxalic acid (unknown sample).

3rd week:
Practical: Simultaneous determination of sulfuric acid and boric acid in a mixture (unknown sample). Preparation of filters for the gravimetric determination Ca(II) as Ca(COO)₂ precipitate. Preparation of 0.02 mol/dm³ KMnO₄ titrant (250 cm³).

4th week:
Practical: Preparation of 0.05 mol/dm³ Na₂(COO)₂ stock solution (100.00 cm³). Determination of the exact concentration of the KMnO₄ titrant solution using Na₂(COO)₂ stock solution. Determination of ferrous oxalate by permanganometric titration (unknown sample). Determination of hydrogen peroxide (unknown sample). Ca(II) as Ca(COO)₂ precipitate (precipitation, filtration).

5th week:
Practical: Preparation of 0.02 mol/dm³ Na₂S₂O₃ titrant (250 cm³) and determination of its exact concentration using 0.003 mol/dm³ KIO₃ stock solution. Determination of copper(II) (unknown sample). Determination of iodide ion (unknown sample). Final results form the determination of Ca(II) by gravimetry (unknown sample).

6th week:
Practical: Preparation of 0.02 mol/dm³ KBrO₃ titrant (250.00 cm³). Determination of ascorbic acid active ingredient content of vitamin C tablet (unknown sample). Determination of the composition of KCl-KBr mixture using 0.05 mol/dm³ AgNO₃ stock solution (unknown sample).

7th week:
Practical: Preparation of 0.01 mol/dm³ Na₂EDTA titrant solution (250.00 cm³). Simultaneous determination of Ca²⁺ and Mg²⁺ ions (unknown sample). Determination of Al(III) (unknown sample). Lab equipment return.

8th week:
Practical: (8th - 13th weeks' topic) Instrumental analysis part: practice of ICP, atomic absorption spectroscopy, UV-VIS spectrophotometry, conductometry, potentiometry, pH-metry.
Requirements

The course is scheduled for semester 4. The laboratory practice consists of two separate parts: classical quantitative analysis and instrumental analysis. The classical quantitative analysis part involved acid-base, redox, argentometric and complexometric titrations as well as two gravimetric procedures. The instrumental analysis part will introduce the student to the practice of atomic and molecular spectroscopy, and different electrochemical methods.

Attendance is compulsory at all of the sessions of the laboratory practice. All practice sessions involved short oral or written tests in order to make sure that student come to the lab fully prepared.

Grading is based on three separate factors:
- the average grade of short test written at the beginning of the classical quantitative analysis lab sessions (an average grade of them at least 2.0 is necessary to avoid a "fail" grade),
- the average grade of unknown samples at the classical quantitative analysis lab sessions (an average of them at least 2.0 is necessary to avoid a "fail" final grade),
- the average grade of instrumental analysis lab sessions (an average of them at least 2.0 is necessary to avoid a "fail" final grade).

Subject: QUANTITATIVE ANALYTICAL CHEMISTRY THEORY II.
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Lecture: 15

Requirements

Exam: oral
In the oral exam two topics are randomly selected, one from the first () and the other from the second () part of the list. During preparation one topic (of your choice) needs to be written in detail while the other will be the subject of an oral exam. The final mark will be determined by the results of the two topics.

Subject closing topic list for pharmacy students
1. Inorganic chemical considerations for the classification of Group I cations. Separation scheme for Group IA and B cations, chemical equations of reactions for the separation and identification of individual cations in this group.
2. Inorganic chemical considerations for the classification of Group II cations. Separation scheme for Group II cations, chemical equations of reactions for the separation and identification of individual cations in this group.
3. Inorganic chemical considerations for the classification of Group III cations. Separation scheme for Group III cations, chemical equations of reactions for the separation and identification of individual cations in this group.
4. Inorganic chemical considerations for the classification of Group IV cations. Separation scheme for Group IV cations, chemical equations of reactions for the separation and identification of individual cations in this group. Chemical equations of reactions for the identification of individual cations in Group V.
6. Chemical reactions in qualitative analysis. Selective, specific and group reactions. Identification
tests, purity tests, content analysis. Ways of reporting the sensitivity of test reactions. Masking.
10. Complex formation equilibria, apparent stability constants.
11. Precipitation equilibria. Factors influencing the solubility of precipitates.
12. Redox equilibria and redox titration curves.
13. Titration curves and their significant points: equivalent volume, end point, titration errors. Chemical end point detection in titrimetric analysis. Chemical requirements for reagents and standard solutions in titrimetric analysis.
14. Practice of acid-base titrations, possibilities of application.
15. Theoretical background and practice of complexometric titrations. The chelate effect.
17. Bromatometry and iodometry.
19. Gravimetry (theoretical background, practical steps, examples).
21. Theoretical basis of the formation of molecular and atomic spectra. Main application fields of the spectroscopic methods.
22. Construction of the UV-Vis spectrometers (constructions, main parts, principles).
23. The practice of UV-Vis spectroscopy (analytical procedures, application areas, basic law).
24. Theoretical basis of atomic spectroscopy. Main methods and applications of atomic spectroscopy.
25. Potentiometry and its application in analytical chemistry.
27. Theoretical basis of chromatography (types, principles, instrumentation (injection, separation, detection), band spreading, separation efficiency, evaluation of chromatograms).

Department of Pharmaceutical Technology

Subject: PHARMACEUTICAL TECHNOLOGY THEORY I.
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Lecture: 30

1st week:

2nd week:
Lecture: The connection between bio-pharmacy and pharmaceutical technology. Basic principles of pharmacokinetics. The connection between pharmaceutical preparation and drug effect.

3rd week:

190
(sedimentation, centrifugation, expression, drying, filtration).

4th week:

5th week:

6th week:

7th week:

8th week:

9th week:

10th week:

11th week:

12th week:

13th week:

14th week:
Lecture: Total Quality Management (TQM)

15th week:
Lecture: The guidelines of Good Manufacturing Practice (GMP)

Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.
CHAPTER 17

Subject: PHARMACEUTICAL TECHNOLOGY PRACTICE I. (PRESCRIPTION WRITING I.)
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Practical: 60

1st week:

2nd week:
Practical: Technical books of pharmacy (European Pharmacopoeia, Formulae Normales, Hungarian Pharmacopoeia) The prescription, nomenclature. Simple calculations (w/w%). Solutions, knowledge of auxiliary materials. Weighing of Paraffinum liquidum, and distilled water. 1. Solutio acida pro parvulo FoNo VII 100,0g.

3rd week:
Practical: Dose calculations. Reading prescriptions. Preparation simple and composite solutions. 2. Solutio pepsini FoNo VI 50,0g 3. Solutio contra rhagades mamillae FoNo VII 34,0g.

4th week:
Practical: Enemas and solutions internal and external use. 4. Solutio papaverini 50,0g (magistral prscription) 5. Klysma chlorali pro infante FoNo VI 80,0g 6. Solutio theophyllini FoNo VII 100,0g 7. Solutio acriflavini FoNo VI 20,0g.

5th week:
Practical: Nasal and ear drops. Mixture. 8. Mixtura pectoralis FoNo VII 100,0g 9. Ogotutta sulfadimidini FoNo VI 10,0g 10. Nasogutta zinci c. ephedrino FoNo VII 10,0g.

6th week:
Practical: Test I.

7th week:
Practical: Gargle and suspensions. 11.

8th week:
Practical: Preparation of drops and their dose calculation. 14. Gutta ethylmorphini FoNo VI 10,0g 15. Gutta codeini FoNo VI 10,0g 16. Gutta methylhomatropini composita FoNo VI 10,0g 17. Suspensio anaesthetica FoNo VII 100,0g.

9th week:
Practical: Preparation of decoctions and infusions. 18. Decoctum saponariae FoNo VI 100,0g 19. Infusum ipecacuanhae pro parvulo FoNo VI 100,0g 20. Solutio noraminophenazoni pro parvulo FoNo VII 100,0g.

10th week:
Practical: Preparation of emulsions. 21. Emulsio olei jecoris FoNo VII 100,0g 22. Solutio antisudorica FoNo VII 50,0g 23. Glycerinum boraxatum FoNo VII 20,0g.

11th week:

12th week:
Practical: Preparation of special emulsions (linimentum). 24. Suspensio siccans FoNo VI 100,0g 25. Linimentum ammoniatum FoNo VI 100,0g 26. Linimentum scabicidum FoNo VI 100,0g.

13th week:
Practical: Test II.

14th week:
Practical: Solutions for veterinary use. 27. Spiritus iodosalicylatus AUV 30,0g 28. Emulsio paraffini cum phenolphtaleino FoNo VII. 29. Suspensio zinci aquosa FoNo VII 100,0g 30. Diluendum menthae.
ACADEMIC PROGRAM FOR THE 2ND YEAR

15th week:

Requirements
Attendance of practicals is obligatory. Altogether two absences in the semester is permitted. After absence the practical should be made up. Students write short tests in most practices and 2 summery tests. This short test will contain measurement conversions and latin words and phrases. The summery tests will contain the knowledge of Pharmaceutical Technology practicals. The students have only one more chance to improve the summery test if the grade is fail. At the end of the semester students get 5-stage practical grade. This final grade will be the average of 2 summery tests and the grade of short tests.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester.

Department of Physiology

Subject: HUMAN PHYSIOLOGY II.
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Lecture: 30
Seminar: 10
Practical: 20

1st week:
Lecture: Introduction, preparation for laboratory practice
Central control of the GI tract
Motor functions of the gastrointestinal tract

2nd week:
Lecture: Secretion of saliva and gastric juice
Exocrine functions of the pancreas and liver
Absorption of nutrients
Control of food intake

3rd week:
Lecture: Vitamins
Test I.

4th week:
Lecture: Energy balance, regulation of body temperature
Introduction, quantitative description of renal function

Mechanism and regulation of glomerular filtration

5th week:
Lecture: Tubular transport processes
Urinary concentration and dilution, clinical correlates
Osmoregulation, water balance, diuretics

6th week:
Lecture: Defense of body fluid volume, sodium balance
Acid-base balance and acid-base disturbances
Calcium homeostasis, physiology of bone

7th week:
Lecture: Potassium balance, mycturition
Test II.

8th week:
Lecture: General principles of endocrinology
Hypophysis, growth hormone

193
9th week:
Lecture: Male, Female gonadal functions
Pregnancy, lactation

10th week:
Lecture: The thyroid gland I.
The thyroid gland II.

11th week:
Lecture: The hormones of adrenal cortex I.
The hormones of adrenal cortex II.
The hormones of adrenal medulla,
catecholamines

12th week:
Lecture: Endocrine regulation of intermediary metabolism I.
Endocrine regulation of intermediary metabolism II.
Endocrine regulation of intermediary metabolism III.

13th week:
Lecture: Test III.

Requirements

1. Signature of Lecture Book
Attendance of lectures, laboratory practices and seminars is compulsory. The signature of the Lecture Book may be refused for the semester in case of more than four absences from the seminars and/or more than two absences from the practices. All missed practices must be made up, whereas the completion of a missed seminar with a different group is not possible. Completion of all topic sheets in the Exercise Book, each verified by the signature of the teacher, is also a precondition of the signature of the Lecture Book. Student must attend seminars with the group appointed by the Educational Office. The program of the Human Physiology II lectures and labs are listed at the website of the Department of Physiology. For continuous updates on all education-related issues please consult with the departmental web-site (http://phys.med.unideb.hu).

2. Evaluation during the semester (mid-semester tests)
The progress of students will be tested 3 times during the semester in the form of a written test (multiple choice questions). Participation on mid-semester written tests is compulsory. Laboratory practical knowledge of the students will be tested at the end of the second semester as part of the Closing Lab, evaluation with two level marks (accepted or not accepted). As a precondition of attending the Closing Lab, the fully completed Exercise Book (with all the verified topics) must be presented prior to the Closing Lab. Students are expected to perform the given experiment on their own and must be familiar with theoretical background also. In case of a negative result, the Closing Lab can be repeated, but only once. If the final evaluation of the Closing lab is “Accepted”, then the student will be exempt for laboratory practical questions on the final exam.

3. Examination
The second semester is closed by the final exam, which is composed of a written test and an oral section, covering the topics of all lectures, seminars and laboratory practices of the full academic year. The result of the exam is failed if the student fails either on the written part or on the oral part. The list of oral exam questions is available on the departmental website (http://phys.dote.hu).

- If the final result of the Closing lab is "Accepted", then the student is exempt for laboratory practical questions on the final exam.
- The average score of the five mid-term tests of the 2017/2018 academic year (two in the first term and three in the second semester) is calculated and
  
a). if the average score is 80% or higher, the student is exempted from written part of the final exam, and only the oral part will be performed.

b). if the average score is between 70% and 80%, 10 bonus points will be added to the result of the written part of the final examination.

c). if the average score is between 60% and 70%, 5 bonus points will be awarded.

- For those students who took the end semester exam during the 2017/2018 academic year, the result of the oral exam will be replaced with the following percentage scores: pass (2): 65%; satisfactory (3): 75%; good (4): 85%; excellent (5): 95%.

- If the final result of the Closing lab is "Not Accepted" or the Department of Physiology refuses to sign the lecture book or in cases of more than four lecture absences the student is not eligible for any exemption or bonus point!

Division of Pharmacognosy

Subject: **PHARMACOGNOSY PRACTICE I.**
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Practical: 60

CHAPTER 17

13th week:
Practical: Elicitation in medicinal plant tissue cultures.

14th week:
Practical: Oral and written test.

15th week:
Practical: ORAL AND WRITTEN TEST

Requirements

Detailed information is given in the first practical course.

Subject: PHARMACOGNOSY THEORY I.
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Lecture: 30

1st week:
Lecture: The origins of pharmacognosy. The nomenclature of plant drugs; Sources of drugs, Production of drugs; Basic metabolic pathways, Origin of primary and secondary metabolites. The biosynthetic pathways.

2nd week:
Lecture: Carbohydrates, fats, proteins.

3rd week:
Lecture: Terpenoids, alkaloids, phenolic compounds, Purified honey, Fig, Manna, Tamarind pulp, Starch, Tragacanth gum, Acacia gum, Sterculia gum, Agar, Irish moss, Linseed, Psyllium, Quince seeds, Marshmallow root, Cotton Fatty acids, Fats, Arachis oil, Olive oil, Sesame oil, Castor oil, Linseed oil, Coconut oil, Cottonseed oil, Maize oil, Theobroma oil, Hydnocarpus oil, Beeswax, Spermaceti, Prostaglandins.

4th week:
Lecture: Proteins, Enzymes.

5th week:
Lecture: Terpenoid compounds, monoterpenes, volatile oils.

6th week:
Lecture: Peppermint, Spearmint, Lavender, Rosemary, Oil of rose.

7th week:
Lecture: Terpenoid compounds, monoterpenes, volatile oils.

8th week:
Lecture: Peppermint, Spearmint, Lavender, Rosemary, Oil of rose.

9th week:
Lecture: Caraway, Dill, Coriander, Thyme, Eucalyptus leaves.

10th week:
Lecture: Cardamomi fruit, Bitter orange peel, Lemon peel, Juniper berris Aniseed, Star anise fruit, Fennel, Cinnamonom, Camphor.

11th week:
Lecture: Clove, Nutmeg, Calmus, Ginger, Turmeric.

12th week:
Lecture: Iridoids, Valerian root, Gentian

13th week:
Lecture: Sesquiterpenes, Chamomile flowers, Matricaria flowers, Absinth Fish berries,
Santonica flowers, Diterpenoids, Colophony resin, Turpentine Triterpenes, Saponins, Liquorice root, Quillia bark. root, Solanum sp., Soya bean, Cardiac-glycosides, Digitalis leaf, Digitalis lanata leaf, Oleander, Strophanthus seeds, Convallaria, Adonis, Erysimum, Indian squill, Black hellebore rhizome.

14th week:
**Lecture:** Senega root, Ginseng; Plant steroids, Steroidal saponins.

15th week:
**Lecture:** Dioscorea tubers, Sisal, Sarsaparilla

Requirements
Detailed information is given in the first lecture.

Faculty of Pharmacy

Subject: **PUBLIC PHARMACY PRACTICE AFTER 2ND YEAR (PERSONNEL AND OBJECTIVE REQUIREMENTS OF PHARMACY AND PREPARATION OF PHARMACEUTICAL DOSAGE FORMS)**
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Practical: 120

Requirements
Syllabus of summer practice for second year pharmacy students

Duration of practice:
4 weeks, 8 hours per day, from which 2 hours may be spent preparing. Second year students are required to gain proficiency in the following areas during their practice at a public pharmacy, and subsequently acquire knowledge about the conditions pertaining to personnel, equipment, supplies, operation, and workflow of a public pharmacy.

Requirements for the student:
Accept and sign the non-disclosure agreement. Any absence from practice must be authentically justified based on the rules of the place of training. All absences must be made up. He/she is expected to follow the directions of the pharmacist in charge of the training.

Skills expected from the student after the completion of practice:
• practical application of theoretical knowledge obtained during his / her studies
• he / she is expected to know the premises and the assets of the public pharmacy and be able to obtain information from manuals and scientific journals used during his / her work
• he / she is expected to learn about the working activities of a public pharmacy
• he / she is required to have an appropriate work relationship with the co-workers in the pharmacy

Student tasks during the practice:
Under the supervision of the pharmacist in charge of the training he / she will participate in the following activities:

1. Conditions pertaining to the personnel, equipment and supplies of the pharmacy:
   - he / she is required to know the activities expected from the co-workers and the rules and regulations pertaining to them
   - he / she is expected to know the rules of procedures
   - he / she is expected to know the work protocol of the pharmacy
   - he / she is required to be aware of rules and regulations pertaining to premises, equipment, supplies and assets
   - he / she is expected to read pharmaceutical manuals and journals
   - he / she is required to handle computer programs used in the pharmacy
   - he / she is expected to become acquainted with authorities supervising work in pharmacies and representative bodies

2. Preparing medicine:
   - Acquiring knowledge about simple pharmaceutical technologies (measurement, mixing powders, dilution, calculating solution concentration and doses, and other simple calculations performed in pharmaceutical practice)
   - Learning magistral medicine preparation and its tools
   - Preparation of liquid medication under supervision, appropriate packaging, knowledge of the usage

Evaluation:

Keeping an electronic notebook:
   - description of 1 syllabus-related practical issue in half / one page every two weeks
   - The pharmacist in charge of the training checks the work and description every second week and evaluates it using a five-point system.
   - He /She sends the electronic notebook to the Dean’s Office according to the rules of the place of training.
   - At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in a written form and grades the student based on a three-point system.
   - He / she will send it to the Dean’s Office in a printed and signed form according to the rules of the training place. Student evaluation: After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training place.
ACADEMIC PROGRAM FOR THE 3RD YEAR

CHAPTER 18

ACADEMIC PROGRAM FOR THE 3RD YEAR

Department of Anatomy, Histology and Embryology

Subject: **PHARMACEUTICAL NEUROBIOLOGY**

Year, Semester: 3rd year/1st semester

Number of teaching hours:

Lecture: 39
Seminar: 16
Practical: 10

1st week:

**Practical**: Histology: The neural tissue.
Histology of the spinal cord. 1. Peripheral nerve (HE) 2. Spinal ganglion (HE) 3. Spinal cord (HE) 4. Spinal cord (Bielschowsky impregnation)

2nd week:
**Lecture**: The structure of the spinal cord. The structure of the brainstem and cerebellum. The structure of the diencephalon and telencephalon

**Practical**: Histology: Histology of the cerebral and cerebellar cortex. 1 Cerebellum (HE) 2 Cerebellum (Golgi impregnation) 3 Cerebrum (Golgi impregnation)

3rd week:

**Practical**: Anatomy: Gross anatomy of the spinal cord and the brain

4th week:
**Lecture**: Neurotransmitters, biochemistry of the receptors. Presynaptic mechanisms of neurotransmission. Postsynaptic mechanisms of neurotransmission.

**Seminar**: Biochemistry

5th week:
**Lecture**: Membrane properties of the neurones and glial cells. Features and significance of the central excitatory and inhibitory synapses. Somatomotor function of the spinal cord.

**Seminar**: Physiology

6th week:
**Lecture**: The somatomotor system. Vestibular apparatus. Roles of spinal chord in the coordination of movements.

**Seminar**: Physiology

7th week:
**Lecture**: Roles of brain stem and cerebellum in the coordination of movements.

**Seminar**: Physiology

8th week:
**Lecture**: General principles of the somatosensory system. The skin. The somatosensory system. Somatovisceral sensory functions.

**Seminar**: Physiology

9th week:

**Practical**: Histology: Functional microscopic anatomy of the skin 1 Fingertip skin (HE) 2 Scalp (HE)

10th week:
**Lecture**: Biochemistry of vision. Physiology of vision. Physiology of taste and smell sensation.
CHAPTER 18

Seminar: Physiology

11th week:
Lecture: Anatomy of auditory and vestibular system. Physiology of hearing. The structure of the autonomic nervous system.
Practical: Histology: Microscopic anatomy of the eyeball and internal ear. 1 Eye (HE) 2. Inner ear (HE)

12th week:

Seminar: Physiology

13th week:
Lecture: Sleep, wakefulness. Learning, memory. The monoaminergic and limbic system.

Seminar: Physiology

14th week:
Lecture: Motivation, behaviour, emotions. Information storage in the CNS, memory disorders.

Seminar: Biochemistry

Requirements

The neurobiology course is an integrated one, delivered as a joint effort of three departments (Departments of Anatomy, Histology and Embryology; Biochemistry and Physiology). In this academic year the Physiology Department is the course organizer. The educational activities of the Neurobiology course include lectures, seminars and practices. Most of the regulations concerning these activities are specific to the individual departments and will be introduced by the respective education officers.

In the detailed program of the course (which, in fact, corresponds to the list of requirements) as well as here, both the compulsory and suggested textbooks are listed. Note, however, that the requirements of the course include material delivered in the lecture hall only, not necessarily available in the recommended textbooks, while in other cases some information in the suggested textbook is not regarded as part of the exam material.

Attendance of the seminars and practices is compulsory, although one may have two seminar and practice absences. If one collects three or more seminar and practice absences (regardless of the reason of the absences) the course organizer may refuse the verification of the lecture book. Making up the missed seminars and practices may be possible, but the individual departments determine the actual procedure.

During the term two self-control tests (SCTs) are organized. Attendance of the SCTs is compulsory. If one meets the passing conditions (see below), the end-semester examination may be substituted with the result achieved on the basis of these tests (i.e. the student in question will be exempted of the final exam). The maximum achievable score is 100 points in the following distribution:

Anatomy: 40 points
Biochemistry: 17.5 points
Physiology: 42.5 points

The points collected in the frame of the two tests will be summarized on a departmental basis. If someone collects at least 60 % of the total number of points provided by the individual departments, she/he will be exempted of the end-semester examination (ESE). The 60 % limit is the following on departmental basis:
ACADEMIC PROGRAM FOR THE 3RD YEAR

Anatomy: 24 points
Biochemistry: 10.5 points
Physiology: 25.5 points

If someone reaches the 60% limit of all departmental scores, the ESE result can be calculated in the following way:
Total number of points score

<table>
<thead>
<tr>
<th>Points Range</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 - 59</td>
<td>fail</td>
</tr>
<tr>
<td>60 - 69</td>
<td>pass</td>
</tr>
<tr>
<td>70 - 79</td>
<td>satisfactory</td>
</tr>
<tr>
<td>80 - 89</td>
<td>good</td>
</tr>
<tr>
<td>90 - 100</td>
<td>excellent</td>
</tr>
</tbody>
</table>

If the departmental score achieved by the student is more than 60%, and he/she wishes to improve this score, it can be done on any of the exam days.

Department of Foreign Languages

Subject: MEDICAL HUNGARIAN I.
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Practical: 30

1st week:
Practical: Bevezetés, ismétlés

2nd week:
Practical: Testrészek

3rd week:
Practical: Belső szervek

4th week:
Practical: Betegségek

5th week:
Practical: Gyakoribb gyógyszerek

6th week:
Practical: Gyógyszerek fajtái

7th week:
Practical: Gyakorlás

8th week:
Practical: Mid-term test

9th week:
Practical: Gyógyszerek csomagolási formái

10th week:
Practical: Gyakori mellékhatások

11th week:
Practical: Kérdések gyakorlása

12th week:
Practical: Dialógusok

13th week:
Practical: Eszközök a gyógyszertárban

14th week:
Practical: Ismétlés

15th week:
Practical: End-term test
Requirements

Attendance
Attending language classes is compulsory. Students should not be absent from more than 10 percent of the classes. If a student is late it is considered as an absence. If a student misses more than two occasions, the final signature may be refused and the student must repeat the course.

Absentees can make up the missed classes in the same week. Maximum one language class may be made up with another group. Students have to ask for the teacher's written permission (by e-mail) 24 hours in advance. Students can attend any class (make up or regular) only if they take their coursebook with them.

The teacher evaluates active participation in each class. Students are not supposed to share coursebooks in the classes therefore if they fail to bring the coursebook to the class for the second time the attendance is refused.

Testing, evaluation
In Medical Hungarian course, students have to sit for a mid-term and an end-term written and oral language tests. A further minimum requirement is the knowledge of 200 words per semester divided into 10 word quizzes. There are five word quizzes before and another five after the midterm test. If students fail or miss any word quizzes they cannot start their written test and have to take a vocabulary exam that includes all 100 words before the midterm and end term tests. A word quiz can be postponed by a week.

The oral exam consists of a role-play from a list of situations covered in the coursebook. If students fail the oral exam, they fail the whole course. The results of the written tests and the oral exam are combined and averaged.

Based on the final score the grades are given as follows.

<table>
<thead>
<tr>
<th>Final score</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-59</td>
<td>fail (1)</td>
</tr>
<tr>
<td>60-69</td>
<td>pass (2)</td>
</tr>
<tr>
<td>70-79</td>
<td>satisfactory (3)</td>
</tr>
<tr>
<td>80-89</td>
<td>good (4)</td>
</tr>
<tr>
<td>90-100</td>
<td>excellent (5)</td>
</tr>
</tbody>
</table>

If the final score of the written tests is below 60, the student can take a written remedial exam once covering the whole semester’s material.

Course book:
See the website of the Department of Foreign Languages: ilekt.med.unideb.hu
Audio files to the course book, oral exam topics and vocabulary minimum lists are also available on the website.
Department of Laboratory Medicine

Subject: CLINICAL BIOCHEMISTRY I.
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Lecture: 30
Practical: 14

1st week:
Lecture: 1. Introduction: pathobiochemistry, clinical chemistry, laboratory diagnostics
2. Different levels of laboratory diagnostics (reference values, requesting test, interpretation of results)

2nd week:
Lecture: 3. Laboratory aspects of investigating human disorders
4. Pathochemistry and laboratory signs of cell damage

3rd week:
Lecture: 5. Pathobiochemistry of inflammation
6. Pathobiochemistry of plasma proteins

4th week:
Lecture: 7. Clinical biochemistry of tumor metastasis
8. Pathobiochemical alterations in association with tumor growth and metastasis formation and their laboratory detection I.

5th week:
Lecture: 9. Pathobiochemical alterations in association with tumor growth and metastasis formation and their laboratory detection II.
10. Tumormarkers in the diagnosis of malignant diseases

6th week:
Lecture: 11. Inherited metabolic diseases and their laboratory diagnostics I.
12. Inherited metabolic diseases and their laboratory diagnostics II.

7th week:
Lecture: 13. Inherited metabolic diseases and their laboratory diagnostics III.
14. Disorders of iron metabolism. Laboratory diagnostics of microcytic anemias.

8th week:
Lecture:
15. Laboratory diagnostics of hemoglobinopathies

Practical: Molecular genetic methods in clinical biochemistry. Laboratory safety.

9th week:
Lecture:
16. Laboratory diagnostics of macrocytic and hemolytic anemias
17. Laboratory diagnostics of quantitative platelet disorders.

Practical: Hematology I. Blood collection, anticoagulants. Preparation of a blood smear, staining

Self Control Test

10th week:
Lecture:
18. Laboratory diagnostics of acute and chronic leukemias and lymphomas I.
19. Laboratory diagnostics of acute and chronic leukemias and lymphomas II.

11th week:
Lecture:
20. Laboratory diagnostics of acute and chronic leukemias and lymphomas III.
21. Blood group serology, biochemistry, inheritance, antigens and antibodies of ABO blood group system
CHAPTER 18

12th week:
Lecture:
22. Biochemistry, inheritance, antigens and antibodies of Rh blood group system and its clinical significance. Compatibility testing
23. Other blood group system (Kell, Kidd, Duffy, MN, Ss, Ii). Regulation of transfusion
Practical: Hematology IV. Evaluation of peripheral smears in malignant hematological diseases.

13th week:
Practical: Determination of AB0 and Rh blood groups.
24. Blood products
25. Laboratory diagnostics of central nervous system diseases. Laboratory investigation of the cerebrospinal fluid.

14th week:
Lecture:
26. Clinical biochemistry at the extremes of ages
27. Clinical biochemistry and laboratory diagnostics of porphyrias
Practical: Detection of irregular antibodies, antibody screening, compatibility testing.
Self Control Test

15th week:
Lecture:
29. Therapeutic drug monitoring I.
30. Therapeutic drug monitoring II.
Practical: Detection of irregular antibodies. Antibody screening and compatibility testing.

Requirements

Participation on practicals:
Attendance of practicals is obligatory. Altogether one absence in the first semester and two absences in the second semester are permitted. In case of further absences, the practicals should be made up for by attending the practicals with another group in the same week, or a medical certificate needs to be presented. Please note that strictly only a maximum of 3 students are allowed to join another group to make up for an absence.

Requirements for signing the Lecture book:
The Department may refuse to sign the Lecture book if the student is absent from practicals more than allowed in a semester.

Assessment:
At the end of the first and second semester there is a written examination (test) assessed by a five grade evaluation.

Requirements for examinations: The examination is based on the lecture and practical material (Practicals in Laboratory Medicine, eds.: János Kappelmayer and László Muszbek, 2016) as well as the relevant chapters from the textbook of William J. Marshall: Clinical Chemistry (8th edition, 2017).
Department of Pharmaceutical Chemistry

Subject: **PHARMACEUTICAL CHEMISTRY PRACTICE I.**
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Practical: **30**

1st week:
**Practical:** Short introductory practice.

2nd week:
**Practical:** Analytical exercises of selected inorganic compounds according to the Pharmacopeia.

3rd week:
**Practical:** Analytical exercises of selected inorganic compounds according to the Pharmacopeia.

4th week:
**Practical:** Analysis of alcohols, citric acid, urea, benzoic acid, resorcinol, thymol, methenamine

5th week:
**Practical:** Analysis of alcohols, citric acid, urea, benzoic acid, resorcinol, thymol, methenamine

6th week:
**Practical:** Vitamines and pain killers

7th week:
**Practical:** Vitamines and pain killers

**Requirements**

The laboratory practice is organized in groups, 7x4 hours. The presence of students at the practices is obligatory. If the student is absent from more than one practices, the semester will not be accepted (there is no possibility to arrange additional extra lab practices).

The semester of the student's lab practice will not be accepted in either of the following cases:
1. three unacceptable written tests/demos with the evaluation "Failed" (Mark "1"),
2. the student was not permitted to start the Lab Practice in two occasions*,
3. the student presented two unacceptable Lab Practice written tests/demos with the evaluation "Failed" (Mark "1"), and was not permitted to start the Lab Practice in one occasion*.
4. five demos or notebooks with the evaluation "Failed" (Marks "1" or "0") altogether in any combination.
5. the average of the marks is below 2.0
6. When the student can not present 4 successful Lab Practices in the semester.

* The student will not be permitted to start a Lab Practice in either of the following cases:
1. the student does not show up in the laboratory in 20 minutes from the scheduled starting date of the Practice,
2. the student can not present her/his lab practice notebook prepared according to the said requirements,
3. the student is unable to reach at least 5.0 points (55.5%) of the maximum score (9.0 points) related to the questions asked in connection with the topics of the Laboratory Practice!
4. When writing the test, cabs and other illegal sources are not allowed to use. If the student is found out in a cheating, the student must leave the Lab, and the Practice will be considered unsuccessful (Mark "0").
1st week:
Practical: Short introductory practice.

2nd week:
Lecture: Pharmacologically important inorganic compounds.
Practical: Analytical exercises of selected inorganic compounds according to Pharmacopeia.

3rd week:
Lecture: General anesthetics: inhalation anesthetics, barbital and non-barbital-type narcotics. Anesthetics with pregnane skeleton. Sedatives and hypnotics: alcohols, aldehydes, urethanes, barbiturates and with 4-quinazolone, bezodiazepine and piperidine skeleton.

4th week:
Lecture: Antiepileptic agents (anticonvulsants): compounds with barbiturate, hydantoin, oxazolidin-dione, succinimide and acylurea structure.
Practical: Aminophenazon derivatives, urethan, phenytoin.

5th week:
Practical: Selected aromatic compounds: resorcinol, thymol, acetylsalicylic acid etc.

6th week:
Practical: Phenothiazin derivatives; methenamine.

7th week:
Practical: Carbohydrates, ascorbic acid, citric acid.

8th week:
Lecture: Psychopharmacones: anxiolytics (minor tranquilizers): carbamates, benzodiazepines, and diphenylmethane-type compounds. Another anxiolytics.

9th week:

10th week:
Lecture: Antiparkinson agents: piperidylphenyl propanols, diphenyl-methanes, phenothiazines, thioxanthenes.

11th week:

12th week:
Lecture: Central and peripheral antitussive agents. Expectorants. Bronchodilators. Medicines effective on the nasal and other mucosa, and on the respiratory system.
13th week:
Lecture: Central Muscle relaxants: ethers of glycerol and derivatives of 1,3-propanediol. Peripheral muscle relaxants: substances with membrane-stabilizing and depolarizing effects.

14th week:

15th week:

Requirements
Lectures: Attendance to lectures is emphatically recommended. All material covered in lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Several new concepts and ideas are discussed in the lectures only and are not present in the textbook. Examination is possible only after a successfully finished laboratory practice.

Department of Pharmaceutical Technology
Subject: PHARMACEUTICAL TECHNOLOGY PRACTICE II. (INDUSTRIAL PRACTICE I.)
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Practical: 60

1st week:

2nd week:
Practical: Infusio natrii chlorati Ph.Hg.VII., Infusio salina Ph.Hg.VII.

3rd week:
Practical: Infusio glucosi Ph.Hg. VII., Infusio manniti 100mg/m Ph.Hg.VII.

4th week:
Practical: Infusio natrii lactici Ph.Hg. VII., Infusio gastrica

5th week:
Practical: Test from infusions.

6th week:
Practical: General principles and technologies of granulation, excipients of granules.

7th week:
Practical: Wet granulation by kneading.

8th week:
Practical: Pharmacopoeial tests and test devices of granules.

9th week:
Practical: General principles and technologies of tablet compression, tablet presses.

10th week:
Practical: Test from tableting

11th week:
Practical: Galenic drug preparation, aims and...

12th week:

13th week:

14th week:

15th week:
Practical: Quality control tests, assessment of practice results.
Self Control Test

Requirements

Attendance of practicals is obligatory. Students have Tabletting, Infusion and Galenic preparation practice during this semester. Altogether two absences in the semester is permitted. After absence the practical should be made up. Students write final tests from Tabletting, Galenic preparation and Infusion practices. The students have only one more chance to improve the test if the grade is fail. From every part (Tabletting, Infusion and Galenic preparation) student has to get a pass (2) mark in order to get the signature from the subject. At the end of the semester students get 5-stage practical grade. This final grade will be the average of the tests from tabletting, infusion and galenic preparations.

Requirements for signing the Lecture book:
The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester.

Subject: PHARMACEUTICAL TECHNOLOGY PRACTICE II. (PRESCRIPTION WRITING II.)
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Practical: 60

1st week:

2nd week:
Practical: Course: Prescription, Pharmacy European Pharmacopoeia. Suppositories, liniments. 4. Linimentum ad pernionem FoNo VII. 5. Calibration of suppository moulds individually (1,2,3g) with Adeps solidus 50, Adeps solidus compositus, Massa macrogoli. Course: Sterile and aseptic formulations, Calculations for the concentration of infusion solutions. Pyrogens. Sugar-containing infusion solutions.
ACADEMIC PROGRAM FOR THE 3RD YEAR

solutions: Infusio glucosi (Ph.Hg.VII.) Infusio manniti (Ph.Hg.VII.).

3rd week:
Practical: Course: Prescription, Pharmacy 6. Determination of replacement factors 2w/w% aminophenazon in Adeps solidus 50 suppository base 5w/w% acetaminophen in Adeps solidus compositus suppository base. 7. Suppositorium aminophenazini 0,10g FoNo VI. Course: Sterile and aseptic formulations. Sterilization. Supplementary infusion solutions. Infusion solutions against acidosis: Infusio natrii hydrogencarbonici 1,3% (Ph.Hg.VII.) Infusion solutions against alkalosis: Infusio gastrica.

4th week:
Practical: Course: Prescription, Pharmacy Preparation of ointments. 8. Unguentum antiseptica FoNo VII. (typical suspension ointment) 9. Unguentum carbamidi FoNo VII. (dissolved ointment) 10. Unguentum boraxatum cum aqua calcis FoNo VII. (w/o ointment) 11. Suppositorium antispastica pro parvulo FoNo VI. Course: Sterile and aseptic formulations. Preparation of eye drops: Oculogutta neomycini FoNo VII. 10,0g Oculogutta zinci FoNo VII. 10,0g.

5th week:

6th week:

7th week:

8th week:

9th week:

10th week:

11th week:

12th week:
Practical: Course: Prescription Pharmacy 32. Sirupus zinci FoNo VII. 33. Suppositorium antiemeticum FoNo VII. 34. Unguentum contra rheumam FoNo VII. 35. Sal ad rehydrationem in different compositions FoNo VII. Course: Galenic preparations and their manufacture. Preparation and investigation of syrups.
CHAPTER 18

13th week:

14th week:

15th week:

Requirements
Attendance of practicals is obligatory. Altogether two absences in the semester is permitted. After absence the practical should be made up. Students write short tests in most practices and 2 summery tests from pharmaceutical technology practice. The students have only one more chance to improve the summery test if the grade is fail. At the end of the semester students get 5-stage practical grade.

Requirements for signing the Lecture book:
The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester.

Subject: PHARMACEUTICAL TECHNOLOGY THEORY II.
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Lecture: 30

1st week:

2nd week:
Lecture: Colloid systems. Molecular colloids, association colloids (termotrop and liotrop association colloids). Mucilages, enemas.

3rd week:

4th week:

5th week:

6th week:

7th week: 

8th week: 

9th week: 

10th week: 

11th week: 

12th week: 

13th week: 

14th week: 

15th week: 
Lecture: Consultation.

Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control tests and the final exam.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.

Division of Pharmacognosy

Subject: PHARMACOGNOSY PRACTICE II. 
Year, Semester: 3rd year/1st semester
Number of teaching hours: 
Practical: 60
CHAPTER 18

1st week: 

2nd week: 
Practical: Alkaloids I.

3rd week: 
Practical: Alkaloids II.

4th week: 
Practical: Alkaloids III.

5th week: 
Practical: Anthraquinone containing plant drugs.

6th week: 
Practical: Flavonolignane and dianthrone containing plant drugs.

7th week: 
Practical: Flavonoid containing plant drugs I.

8th week: 
Practical: Flavonoid containing plant drugs II.

9th week: 
Practical: Tannin containing plant drugs.

10th week: 
Practical: Coumarin containing plant drugs.

11th week: 
Practical: Plant drugs containings miscellaneous phenolic compounds.

12th week: 
Practical: Examination of herbal tea mixtures.

13th week: 
Practical: Examination of herbal tea mixtures. Identification of plant drugs. Consultation.

14th week: 
Practical: Oral and written test.

15th week: 
Practical: Oral and written test.

Requirements

Detailed information is given in the first practical course.

Subject: PHARMACOGNOSY THEORY II.
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Lecture: 30

1st week: 
Lecture: Alkaloids, history, distribution, properties.

2nd week: 
Lecture: Ornithine-derived alkaloids, Hyoscyamus leaf, Egyptian Hen-bane, Stramonium leaf, Belladonna herb and root, Duboisia leaves, Coca leaf and Cocaine.

3rd week: 
Lecture: Lysine-derived alkaloids, Lobelia, Tobacco alkaloids.

4th week: 
Lecture: Phenylalanine-derived alkaloids, Ephedra, Khat.

5th week: 
Lecture: Opium poppy, Opium, Hydrastis, Ipecacuanha, Colchicum seed and Corm.

6th week: 
Lecture: Triptophan-derived alkaloids, Ergot, Calabar bean, Nux vomica, Rauwolfia, Catharanthus roseus, Cinchona.
7th week:
**Lecture**: Imidazole alkaloids, Jaborandi leaf and pilocarpine.

8th week:
**Lecture**: Purine alkaloids, Coffee seed, Thea, Cocoa seed, Maté leaf, Cola, Guarana.

9th week:
**Lecture**: Phenols and phenolic glycosides; Phloroglucinol-derivatives, Male fern.

10th week:
**Lecture**: Anthraquinones and glycosides, Senna leaf, Cascara bark, Frangula bark, Rhubarb, Aloes.

11th week:
**Lecture**: Flavonoid compounds, Silybum, Sambucus.

12th week:
**Lecture**: Tannins, Galls and Tannic acid, Hamamelis, Catechu, Rhatany Coumarins and their glycosides, Visnaga.

13th week:
**Lecture**: Lignans, Podophyllum and Podophyllum resin.

14th week:
**Lecture**: Simple phenolic compounds, Vanilla and Vanillin, Baerberry leaves, Cinnamom, Capsicum, Henna, Indian hemp.

**Requirements**
Detailed information is given in the first lecture.

---

**Institute of Behavioural Sciences, Faculty of Public Health**

**Subject**: PHARMACEUTICAL PSYCHOLOGY

Year, Semester: 3rd year/1st semester

Number of teaching hours:
Lecture: 30

1st week:
**Lecture**: Basics of communication. Communication with handicapped people

2nd week:
**Lecture**: Communication with elderly people

3rd week:
**Lecture**: Biopsychosocial model. Health behaviors: definition, demographic determinants. The model of health beliefs, variables influencing health attitudes.

4th week:
**Lecture**: Illness behaviors: definition, the experience of illness, patient role. Representations and benefits of illness. Illness cognitions

5th week:
**Lecture**: Stress, coping, psychological immune system

6th week:
**Lecture**: Illness as crisis. Chronic illness, hospitalization.
### Requirements

Attendance in the lectures is required. Usable understanding of the core theoretical concepts and conceptions is required as well as the knowledge on the actual patients’ rights regulation.

### Department of Foreign Languages

ACADEMIC PROGRAM FOR THE 3RD YEAR

14th week: 
Self Control Test 

Requirements

Signing of the Lecture Book: 
Participation in the Seminars and the Practical Courses is compulsory. The Department shall refuse to sign the students' Lecture book if he/she is absent from more than two seminars during semester.

Self control tests (SCTs), offered grades, end-term exam: 
During the semester two self control test (SCT) will be organised (weeks 6 and 14). The first SCT contains the material of the lectures of weeks 1-4 as well as the material of seminars on weeks 2-4. To ensure a solid basic knowledge of immunology, students must score higher than 60% to qualify for the 2nd SCT, hence for an offered grade. 
The 2nd SCT contains the material of lectures 5-13 and seminars 5-12
If a student's score for the first SCT is higher than 60% and the score of the second SCT is higher than 50%, she/he will be offered a grade. Should student accept this offered grade, she/he will be exempted from the end-term exam.

The offered grades are calculated by the following algorithm, based on the cumulative percentage points of the two SCTs (i.e. 200 points maximum).

<table>
<thead>
<tr>
<th>Points</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>110 - 139:</td>
<td>pass (2)</td>
</tr>
<tr>
<td>140 - 149:</td>
<td>satisfactory (3)</td>
</tr>
<tr>
<td>150 - 169:</td>
<td>good (4)</td>
</tr>
<tr>
<td>170 – 200:</td>
<td>excellent (5)</td>
</tr>
</tbody>
</table>

Those students who have not qualified for an offered grade must take the end-term exam during the exam period. The end-term exam consists of a written and an oral part.

"A" exam:
To qualify for the oral part of an "A" exam, students must score higher than 70% on the written (entry) exam. Students who score less than 70% on the written part will fail (thus, the oral exam will not take place).

"B" exam:
"B" exams are identical to "A" exams except when the student failed the oral, but not the written, part of the "A" exam. With a score of higher than 70% on the written part of the "A" exam, the student is exempt from the written exam on the "B" exam.

"C" exam:
"C" exams are oral exams only, without a written entry test. Those students who would like to improve the grade of a successful ("A" or "B" exam) or do not accept the offered grade, are also exempted from the entry test.

The list of exam topics is available on the departmental website (www.immunology.unideb.hu). Lecture materials and other information concerning education can be found on our website at www.immunology.unideb.hu.
Department of Laboratory Medicine

Subject: CLINICAL BIOCHEMISTRY II.
Year, Semester: 3rd year/2nd semester
Number of teaching hours:
Lecture: 60
Seminar: 8
Practical: 30

1st week:
Practical: Laboratory informatics

2nd week:
Lecture: 4. Other coagulopathies, platelet function disorders 5. Acquired thrombophilias 6. Prethrombotic state, thromboembolias, consumption coagulopathies
Practical: Laboratory diagnostics of coagulopathias

3rd week:
Lecture:
7. Laboratory diagnosis of autoimmune diseases
8. Disorders of sodium and water metabolism I.
9. Disorders of sodium and water metabolism II.
Practical: Laboratory diagnostics of Thrombophilia. Laboratory monitoring of anticoagulant therapy

4th week:
Lecture:
10. Disorders of potassium metabolism
11. Disturbances of the acid-base balance
12. Laboratory diagnostics of renal disorders
Practical: Laboratory diagnostics of platelet function disorders. Laboratory monitoring of antiplatelet therapy

5th week:
Lecture:
13. Pathobiochemistry of the renal function I.
14. Pathobiochemistry of the renal function II.
15. Hypoglycaemias
Practical: Laboratory diagnostics of renal disorders

6th week:
Lecture:
16. Pathogenesis and pathomechanism of diabetes mellitus
17. Pathobiochemistry and clinical biochemistry of the acute complications of diabetes mellitus
18. Laboratory diagnostics of diabetes mellitus
Practical: Examination of urine sediment
Self Control Test

7th week:
Lecture:
19. Disorders of lipid metabolism
20. Laboratory diagnostics of hyperlipidemia
21. Risk factors of atherosclerosis
Practical: Basic laboratory methods in metabolic diseases

8th week:
Lecture:
22. Laboratory diagnostics of acute coronary syndrome I.
23. Laboratory diagnostics of acute coronary syndrome II.
24. Laboratory diagnostics of hyperuricaemia and gout
Practical: Drug monitoring

9th week:
Lecture:
25. Pathobiochemistry of liver disorders
26. Laboratory diagnostics of liver disorders. Pathobiochemistry of acute hepatic disorders
27. Pathobiochemistry and laboratory diagnostics of cholestasis and cirrhosis
Practical: Serum lipid measurements

10th week:
Lecture:
28. Pathobiochemistry and laboratory diagnosis
of autoimmune liver diseases
29. Pathobiochemistry and laboratory diagnostics
   of the gastrointestinal tract I.
   **Practical:** Chromatography, respiratory test
   **Self Control Test**

11th week:
**Lecture:**
30. Pathobiochemistry and laboratory diagnostics
   of the gastrointestinal tract II.
31. Laboratory diagnostics of acute pancreatitis
32. Clinical biochemistry of hypothalamus and
    hypophysis
   **Practical:** Laboratory diagnostics of myocardial
   infarction

12th week:
**Lecture:**
33. Pathobiochemistry of thyroid disorders
34. Laboratory diagnostics of thyroid functions
   **Practical:** POCT

13th week:
**Lecture:**
35. Clinical chemistry of parathyroid disorders
36. Disorders of calcium, phosphate and
    magnesium metabolism
37. Pathobiochemistry and laboratory diagnostics
    of adrenal cortex disorders
   **Practical:** Laboratory evaluation of liver and
    pancreas function

14th week:
**Lecture:**
38. Pathobiochemistry and laboratory diagnostics
    of adrenal medulla disorders
39. Clinical biochemistry of gonadal functions
40. Laboratory diagnostics of bone disorders
   **Practical:** Laboratory evaluation of liver and
    pancreas function - case presentation
   **Self Control Test**

15th week:
**Lecture:**
41. Laboratory diagnostics of muscle disorders
42. Demonstration of practical pictures
43. Summary of laboratory methods
   **Practical:** Immunoassay

**Requirements**

Clinical Biochemistry - Participation on practicals:
Attendance of practicals is obligatory. Altogether one absence in the first semester and two
absences in the second semester are permitted. In case of further absences, the practicals should be
made up for by attending the practicals with another group in the same week, or a medical
certificate needs to be presented. Please note that strictly only a maximum of 2 students are allowed
to join another group to make up for an absence.
Requirements for signing the Lecture book: The Department may refuse to sign the Lecture book if
the student is absent from practicals more than allowed in a semester.

Assessment: At the end of the first and second semester there is a written examination (test)
assessed by a five grade evaluation.

Requirements for examinations:
The examination is based on the lecture and practical material (Practicals in Laboratory Medicine,
eds.: János Kappelmayer and László Muszbek, 2016) as well as the relevant chapters from the
Department of Pharmaceutical Chemistry

Subject: **PHARMACEUTICAL CHEMISTRY PRACTICE II.**
Year, Semester: 3rd year/2nd semester
Number of teaching hours:
Practical: 30

1st week:
**Practical:** Short introductory practice.

2nd week:
**Practical:** Methanol impurity in ethanol; analysis of the Meristine tablet; allopurinol, hexachlorophene

3rd week:
**Practical:** Analysis of the sulfa drugs, trimethoprim, chloramphenicol.

4th week:
**Practical:** Coffein, theobromine, theophylline.

5th week:
**Practical:** Analysis of the Antineuralgica tablet.

6th week:
**Practical:** Analysis of china alkaloids, drotaverin, papaverin.

6th week:
**Practical:** Investigation of the Boron-Zinc ointment; investigation of Pulvis Chinacisalis

7th week:
**Practical:** Analysis of Suppositorium analgeticum. Injectio algopyrini.

Requirements
See the requirements in the first semester.

Subject: **PHARMACEUTICAL CHEMISTRY THEORY II.**
Year, Semester: 3rd year/2nd semester
Number of teaching hours:
Lecture: 60

1st week:

2nd week:

3rd week:

4th week:
**Lecture:** Medicines of the hyperlipoidemia: clofibrate, nicotinic acid, lovastatin. Compounds effective on the hematopoiesis. Plasma substitutes. Substances effective on the
hemostasis: anticoagulants, antithrombotics, inhibitors of platelet aggregation. Coagulants, derivatives of vitamin K. Fibrinolysis inhibitors.

5th week:

6th week:

7th week:

8th week:

9th week:

10th week:

11th week:

12th week:

13th week:

14th week:

15th week:

Requirements

Attendance to lectures is emphatically recommended. All material covered in lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Several new concepts and ideas are discussed in the lectures only and are not present in the textbook. Final examination is possible only after succesfully finished and accepted laboratory practices 1+2.
Department of Pharmaceutical Technology

Subject: PHARMACEUTICAL TECHNOLOGY PRACTICE III. (INDUSTRIAL PRACTICE II.)
Year, Semester: 3rd year/2nd semester
Number of teaching hours:
Practical: 60

1st week:

2nd week:
**Practical**: Sol. pro dialys. perit. I. (Ph.Hg.VII.), Sol. anticoag. “ACD” (Ph.Hg.VII.)

3rd week:
**Practical**: Collins “C” oldat. Kardiostop I. oldat

4th week:
**Practical**: Oculogutt. neomycin. (FoNo.VII.). Oculent. simplex (Ph.Hg.VII.). Oculent. hydrosum (Ph.Hg.VII.). Oculent. neomyc. FoNo VII.

5th week:
**Practical**: Test from infusions and eye preparations.

6th week:
**Practical**: High-shear granulation.

7th week:
**Practical**: Fluid bed granulation.

8th week:
**Practical**: Hard gelatin capsules, capsule filling and pharmacopoeial tests.

9th week:
**Practical**: Tablet compression, process parameters and tablet qualification.

10th week:
**Practical**: Test from tableting.

11th week:
**Practical**: Semisolid dosage forms ‘3. Suspension type ointments Pastes. Formulation techniques, equipment.

12th week:
**Practical**: Solid dosage forms ‘1. Combined suppository bases. Aims and formulation techniques, equipment.

13th week:
**Practical**: Solid dosage forms ‘2. Suppository formulation in industrial scale. Aims and formulation techniques, equipment.

14th week:
**Practical**: Cosmetics. Aim, possibilities and formulation techniques, equipment.

15th week:
**Practical**: Quality control tests, assessment of practice results.
**Self Control Test**

Requirements

Attendance of practicals is obligatory. Students have Tabletting, Infusion and Galenic preparation practice during this semester. Altogether two absences in the semester is permitted. After absence the practical should be made up. Students write final tests from Tabletting, Galenic preparation and Infusion practices. The students have only one more chance to improve the test if the grade is fail. From every part (Tabletting, Infusion and Galenic preparation) student has to get a pass (2) mark in
order to get the signature from the subject. At the end of the semester students get 5-stage practical grade. This final grade will be the average of the tests from tabletting, infusion and galenic preparations.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester.

Subject: **PHARMACEUTICAL TECHNOLOGY PRACTICE III. (PRESCRIPTION WRITING III.)**

Year, Semester: 3rd year/2nd semester

Number of teaching hours:

Practical: 60

1st week:
**Practical:** Course: Prescription Pharmacy
Introduction, general information. Labour safety, laboratory regulations. Requirements.

2nd week:
**Practical:** Course: Prescription Pharmacy
Vaginal dosage forms (ovulum, globulus, globulus vaginalis longiformis), Preparation of suppositories by the help of cold compression with Theobroma oil. 1. Ovulum nystatini FoNo VII. 2. Globulus glycerini boraxati FoNo VII. 3. Globulus zinci sulfurici (individual composition) (ZnSO4 1,60g; Butyrum cacao 10,0g; for 4 globuli). Course: Sterile and aseptic formulations Cytostatic infusion solutions. Perfusion solutions. Collins solution. Kalium dihydrogenphosphoricum 2,05g. Glucosum anhydricum 25,0g. Magnesium sulfuricum 7,4g. Procainium chloratum 0,1g. Aqua dest. pro inj. ad 500ml. Collins I.solution (SZOTE). Kalium dihydrogenphosphoricum 2,05g. Kalium hydrophosphoricum 9,70g. Kalium chloratum 1,12g. Natrium hydrogencarbonicum 0,84g. Aqua dest. pro inj. ad 1000ml.

3rd week:
**Practical:** Course: Prescription Pharmacy
Divided powders. 1. Pulvis antidoloricus FoNo VII. 2. Pulvis asthmalyticus fortis FoNo VII. 3. Pasta contra solarem FoNo VII. 4. Cremor aquisus FoNo VII. Course: Sterile and aseptic formulations Plasma substitute infusion solutions. Cardiostop solutions. Cardiostop I. solutions. Natrium chloratum 0,4g. Kalium chloratum 0,3g. Magnesium chloratum sol. 50% 0,3g. Glucosum anhydricum 1,5g. Mannitum 20,6g. Aqua dest. pro inj. ad 500,0ml. Solutio anticoagulans ACD(Ph.Hg.VII.).

4th week:
**Practical:** Course: Prescription Pharmacy
Incompatibilities. 1. Incompatibility 1. 20,0g 2. Incompatibility 2. 150,0g 3. Incompatibility 3. 100,0g 4. Incompatibility in suppository. (Codein. 0,24g; Aspirin 3,00g, Phenacetin 3,00g, Adeps solidus 3 instead of Adeps solidus 50) Course: Sterile and aseptic formulations, Ophthalmic ointments, Oculentum simplex Ph.Hg.VII. 50,0g, Oculentum hydrosom Ph.Hg.VII 20,0g, Oculentum neomycini FoNoVII 10,0g

5th week:
**Practical:** Course: Prescription Pharmacy
CHAPTER 18

6th week:

7th week:

8th week:

9th week:

10th week:

11th week:

12th week:

13th week:
Practical: Course: Prescription, Pharmacy Test 2. Course: Galenic preparations and their manufacture. Preparation and investigation of suppositories.

14th week:
Practical: Course: Prescription, Pharmacy 39. Unguentum antiphlogisticum pro infante FoNo VII. 40. Unguentum ichthyolsalicylatum FoNo VII. 41. Pulvis cholagogus FoNo VII. 42. Unguentum dermophyllicum FoNo VII. Course: Galenic preparations and their manufacture. Preparation and investigation of powders.

15th week:

Requirements
Attendance of practicals is obligatory. Beside pharmaceutical technology practice students have Tabletting, Infusion and Galenic preparation practice. Altogether two absences in the semester is permitted. After absence the practical should be made up. Students write short tests in most practices and 2 summery tests from pharmaceutical technology practice. Also they write final tests from Tabletting, Galenic preparation and Infusion practices. The students have only one more
chance to improve the summery test if the grade is fail. At the end of the semester students get 5-stage practical grade. This final grade will contain the marks from pharmaceutical technology practice, tabletting, infusion and galenic preparations.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester.

Subject: **PHARMACEUTICAL TECHNOLOGY THEORY III.**
Year, Semester: 3rd year/2nd semester

| 10th week | **Lecture:** Homeopathic preparations and pharmaceutical forms. What is a homeopathic drug? Homeopathic pharmaceutical bases, drug-transfers and ingredients. Preparations. Guides for the formulation of homeopathic preparations. OGYI. Important preparations. A:U:V:
CHAPTER 18

11th week:

12th week:

13th week:
Lecture: The connection between drug formulation and technological chemistry.

14th week:
Lecture: Consultation.

15th week:
Lecture: Consultation

Requirements

Attendance of practicals is obligatory. Altogether two absences in the semester is permitted. After absence the practical should be made up. Students write short tests in most practices and 2 summery tests. This short test will contain measurement conversions and latin words and phrases. The summery tests will contain the knowledge of Pharmaceutical Technology practicals. The students have only one more chance to improve the summery test if the grade is fail. At the end of the semester students get 5-stage practical grade. This final grade will be the average of 2 summery tests and the grade of short tests.

Requirements for signing the Lecture book:
The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester.

Faculty of Pharmacy

Subject: PUBLIC PHARMACY PRACTICE AFTER 3RD YEAR (PREPARATION OF PHARMACEUTICAL DOSAGE FORMS, MANAGEMENT-QUALITY ASSURANCE, DISPENSING, PHARMACEUTICAL BUSINESS ADMINIST)
Year, Semester: 3rd year/2nd semester
Number of teaching hours:
Practical: 120

Requirements

Syllabus for the practice in a public pharmacy after third year

Duration of practice:
4 weeks, 8 hours daily, from which 2 hours may be spent preparing individually The student is required to gain proficiency in the following areas during his/her practice at a public pharmacy, and subsequently acquire knowledge about pharmacy operation including dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.
Requirements for the student:
Accept and sign the non-disclosure document. Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up. He/she is expected to follow the guidance of the pharmacist in charge of the training.

Skills expected from the student after the completion of practice:
• practical application of the theoretical knowledge obtained during his / her studies
• he / she is expected to know the premises and the assets of the public pharmacy and be able to get information from manuals and scientific journals used during his / her work
• he / she is expected to learn about the work activities of a public pharmacy
• he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
• he / she is expected to know the rules and regulations pertaining to the operation of pharmacies
• he/ she is required to explore the possibilities of communicating with patients

The student’s tasks during the practice:
Under the supervision of the pharmacist in charge of the training he / she participates in the following activities:

1. Preparation of medicine.
In the process he / she is required to learn:
• How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
• The legal possibilities of changing the original prescription
• The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
• Documentation of preparation, and administrative obligations
• Storage of materials, processing of basic formulations and subsequent administrative obligations Formulations of the compendium and FoNo

2. Operation and quality assurance.
In the process he / she is required to learn
• administrative work in the pharmacy
• standard procedures for workflow
• how to check and document workflow
• the rules pertaining to the examining and sampling incoming medications, documentation of examinations

3. Drug dispense. In the process he / she is required to learn
• how to check the content and layout of the prescription
• the database of nutrition complements and medicinal formulae
• adequate application of the computer program.
• he / she is expected to get acquainted with the process and documentation of drug dispensing, and communication with patients
• the notion of pharmacy care and its practical ramifications

4. Medicine ordering. In the process he / she is required to learn:
• how to order medicine
CHAPTER 18

• about narcotics and activities involving their handling
• the rules pertaining to hazardous waste

Evaluation:

Keeping an electronic notebook:
- description of 1 syllabus-related practical problem in half / one page.
- The pharmacist in charge of the training checks the work and description every second week and evaluates it using a five-grade system.
- He /She sends the electronic notebook to the Dean’s Office according to the rules of the place of training.
- At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system.
- He / she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place.

Student evaluation: After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.
CHAPTER 19

ACADEMIC PROGRAM FOR THE 4TH YEAR

Department of Biopharmacy

Subject: PHARMACEUTICAL BIOANALYTICS AND BIOTECHNOLOGY I.
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: 30

1st week:
Lecture: Modern biotechnology (history, basic concept)

2nd week:
Lecture: Biotechnology methods and biotechnology products in therapy

3rd week:
Lecture: Production of biotechnological drugs I.: fermentation

4th week:
Lecture: Production of biotechnological drugs II.: recombinant technology, GMO

5th week:
Lecture: Gene technology I.: GH, insulin, enzymes, mABs, cytokines

6th week:
Lecture: Gene technology II.: vaccines, antibiotics

7th week:
Lecture: Gene technology III.: gene therapy, personalized medication
Self Control Test

8th week:
Lecture: Gene technology IV.: stem cells, stem cells in therapy, cell banks.

9th week:
Lecture: Gene technology V.: pharmaco genetics, pharmaco genomics, HGP, ENCODE project

10th week:
Lecture: Modern drug delivery systems, nano and biotechnology based therapies.

11th week:
Lecture: Biotechnology based targeted (cancer) therapies

12th week:
Lecture: Industrial production: documentation, QA, QC, validity

13th week:
Lecture: Regulation, biosimilar products, FDA/EMA regulation

14th week:
Lecture: Ethics od biotechnology, future directions.

15th week:
Lecture: Self Control Test
Self Control Test

Requirements

At least 30 % of the lectures must be visited. Students have to write two control test, on 7th, and 15th week. If the results of the tests will not be at least 60%, the students will not be able to take End of Semester Exam (ESE).
At the end of the semester from Pharmaceutical Biotechnology and Bioanalitics students take ESE
which is oral.

Department of Medical Microbiology

Subject: MEDICAL MICROBIOLOGY I.
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: 30
Seminar: 10
Practical: 10

1st week:
Lecture: The microbial word. Pharmaceutical importance of microbes. Prokaryotic cell structure.

2nd week:
Lecture: Morphology and physiology of bacteria. Pathogenesis and infection. Bacterial genetics.

3rd week:
Lecture: Host defenses against bacterial infections. Immunological basis of vaccination.
Practical: Culture techniques (culture conditions, media, colony morphology). Identification of bacteria (examination of biochemical activity). Diagnosis of anaerobic infections.

4th week:
Practical: Immunoserological methods in microbiological diagnosis (precipitation, agglutination, complement fixation, ELISA and western-blot). Molecular diagnostic methods.

5th week:
Practical: Methods for testing antibiotic susceptibility. Examination of antibiotic interactions.

6th week:
Lecture: Gram-positive cocci and rods. Gram-negative cocci. Acid-fast bacteria
Practical: Development and clinical trial of antibiotics.

7th week:
Seminar: Diagnosis of enteric bacterial infections.

8th week:
Lecture: Mycoplasms and obligatory intracellular bacteria. Spirochaetes.
Seminar: Bacterial respiratory infections. Antituberculotic agents.

9th week:
Lecture: Cell wall synthesis inhibitors.

10th week:
Lecture: Protein synthesis inhibitors.
Seminar: Urinary tract infections. Bacterial sexually transmitted diseases (STD)
11th week:
Lecture: Antibiotics interfering with nucleic acid metabolism and antimetabolite antibiotics.

12th week:
Lecture: Fungal cell structure, physiology, virulence.
Seminar: Types and mechanisms of clinically relevant antibiotic resistance.

13th week:
Lecture: Antifungal agents. Medically important fungal pathogens.
Seminar: Diagnosis of fungal infections.

14th week:
Seminar: Antimicrobial agents in clinical practice.

15th week:
Lecture: Consultation.
Seminar: Consultation.

Requirements
Participation in the practical courses and seminars is obligatory. The Department may refuse to sign the students' Lecture book if they are absent from more than two practices or seminars in a semester.
At the end of 1st semester the student is required to take an end-semester examination based on the whole material of the lectures, practices and seminars of the semester. The examination consists of a written test and an oral examination.

Department of Pharmaceutical Technology
Subject: PHARMACEUTICAL TECHNOLOGY THEORY IV.
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: 30

1st week:

2nd week:

3rd week:
Lecture: Physical and physicochemical properties of the active agent, distribution coefficients, lipophylia, value of pK, dissolution and speed of dissolution, the influence of particle size, polymorphous, salt, prodrug, chemical stability of active agent, the influence of ingredients.

4th week:
5th week:

6th week:

7th week:
**Lecture:** Retard oral preparations. Pharmacokinetical bases of planning oral retard preparations. Planning of drug preparations with the dissolution of null and first order. Controlling the bioavailability and bioequivalence of retard oral preparations.

8th week:
**Lecture:** Depot parenteral preparations. Solutions, suspensions, emulsions, implants.

9th week:
**Lecture:** Therapeutic systems: basic principles. Local therapeutic systems. Transdermal therapeutic systems. Oral therapeutic systems, parenteral therapeutic systems.

10th week:

12th week:
**Lecture:** Veterinary preparations. Veterinary FoNo. Special veterinary drug forms.

13th week:
**Lecture:** Modern drug forms I. Drugs with fluid-crystals. Therapeutic nail polish. Microemulsions as the new transporter systems for active agents. Formulation of parenteral microemulsions. V/o/v emulsions in cosmetics.

14th week:

15th week:
**Lecture:** Consultation.

**Requirements**
Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control tests and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.

**Subject:** PHARMACEUTICAL TECHNOLOGY PRACTICE IV. (INDUSTRIAL PRACTICE III.)
Year, Semester: 4th year/1st semester
Number of teaching hours:
Practical: 45

## Requirements

Attendance of practicals is obligatory. Students have Tabletting, Infusion and Galenic preparation practice during this semester. Altogether two absences in the semester is permitted. After absence the practical should be made up. Students write final tests from Tabletting, Galenic preparation and Infusion practices. The students have only one more chance to improve the test if the grade is fail. From every part (Tabletting, Infusion and Galenic preparation) student has to get a pass (2) mark in order to get the signature from the subject. At the end of the semester students get 5-stage practical grade. This final grade will be the average of the tests from tabletting, infusion and galenic preparations.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester.
CHAPTER 19

Department of Pharmacology

Subject: **PHARMACEUTICAL AND BIOANALYTICAL CHEMISTRY I.**
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: 30
Seminar: 15

1st week:
**Lecture:** Introduction, the role of analytical and bioanalytical chemistry in pharmaceutical and medical sciences.
**Seminar:** Introduction, announcement of requirements.

2nd week:
**Lecture:** Sampling and sample preparation, preparation of applied materials and labor-wares.
**Seminar:** Functional groups.

3rd week:
**Lecture:** Molecular spectroscopy I.: Basics and application of UV-VIS spectrophotometry in drug metabolism and bioanalytics.
**Seminar:** Samples in the pharmaceutical industry.

4th week:
**Lecture:** Molecular spectroscopy II.: Basic principles and application of IR spectroscopy in pharmaceutical sciences.
**Seminar:** System suitability, LOD, LOQ.

5th week:
**Lecture:** Structural identification of small organic compounds by mass spectrometry (EI-MS). Basics, construction of MS equipments (EI-CI-FAB-FIB-MALDI ion sources, analysers, detectors, vacuum system).
**Seminar:** Structure identification (IR, UV-VIS, EI-MS).

6th week:
**Lecture:** Interpretation of EI-MS spectra (general rules, fragmentation), applications.
**Seminar:** Consultation from the lecture materials.

7th week:
**Seminar:** Demonstration of instruments.
**Self Control Test**

8th week:
**Lecture:** Chromatographic separation I.: basic principles of chromatography, chromatographic techniques VRK, 2D VRK, affinity chromatography, column chromatography.
**Seminar:** Consultation of the 1st SCT.

9th week:
**Lecture:** Chromatographic separation II.: Basic principles and application of GC, HPLC and SFC in drug development and pharmaceutical industry.
**Seminar:** Calibration, chromatographic parameters.

10th week:
**Lecture:** Thermal analysis (TG, DSC).
**Seminar:** Units, unit conversation.

11th week:
**Lecture:** Classification of drug impurities.
**Seminar:** Dilution, concentration, calculation of concentration.

12th week:
**Lecture:** Identification and measurement of drug impurities.
**Seminar:** Instrumental demonstration.

13th week:
**Lecture:** Drugs, drug related substances, metabolites, degradation products in the environment (sources, effects, measurement possibilities, prevention).
**Seminar:** Consultation from the materials of the lectures and seminars.
ACADEMIC PROGRAM FOR THE 4TH YEAR

14th week:
Lecture: 2nd Self-control test.
Seminar: Self-control test.
Self Control Test

15th week:
Lecture: Consultation.
Seminar: Consultation.

Requirements
At least 30% of the lectures must be visited. Students have to write each of the two control tests and one from the seminar. The requirements for the signature: I. the average of the self control tests from the theory must be minimum 40%. II. The result of the seminar test must be minimum 75%!

Subject: PHARMACOLOGY PRACTICE I.
Year, Semester: 4th year/1st semester
Number of teaching hours:
Practical: 60

1st week:
Practical: Introduction to pharmacology.

2nd week:
Practical: Receptors and signaltransduction.

3rd week:
Practical: Neurotransmission and neurotransmitters in the CNS.

4th week:
Practical: General anesthetics.

5th week:

6th week:
Practical: Antiepileptics.

7th week:
Practical: Pharmacologic management of Parkinsonism.

8th week:
Practical: Drugs used in Alzheimer’s Disease.

9th week:
Practical: Migraine.

10th week:
Practical: Central and peripheral skeletal muscle relaxants.

11th week:
Practical: Drugs with important actions on smooth muscle. Local anesthetics.

12th week:
Practical: Basic pharmacology.

13th week:
Practical: Cholinerg-activating and cholinceptor-blocking drugs.

14th week:
Practical: Adrenoceptor-activating and blocking drugs.

15th week:
Practical: General consultation on the curriculum of the first semester
Requirements

During the semester students have to take two exams. Requirements for the signature of the Lecture Book for the semester are at least a pass (2) on both exams. Attendance at seminars is compulsory: the signature may be refused in the case of absences from more than four seminars. Signature is compulsory for the student to be allowed to take the End of Semester Exam (ESE).

The average of the two mid-semester exams provides the grade of the Assessment of Workmanship (AW5) for the Pharmacology I. practice. In case the student does not reach a pass (2) on both mid-semester exams, the signature of the lecture book is refused, and the student fails the semester. In case the student does not reach a pass (2) on one of the mid-semester exams, the student must take a correction exam from all the topics of the semester on the last week of the semester. The grade of the correction exam will be averaged with the two mid-semester exams and this average will give the grade of the AW5 for the Pharmacology I. practice. Further correction of this AW5 grade is not an option.

Subject: PHARMACOLOGY THEORY I.
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: 60

1st week:
Lecture: Introduction to pharmacology of CNS drugs. Neurotransmission and the CNS. General anesthetics.

2nd week:
Lecture: Opioid analgesics and antagonists.

3rd week:
Lecture: Drugs of abuse.

4th week:
Lecture: Sedatohypnotics.

5th week:
Lecture: Antidepressants II and lithium. Antipsychotics.

6th week:
Lecture: Antiepileptics.

7th week:
Lecture: Pharmacologic management of Parkinsonism

8th week:
Lecture: Drugs used in Alzheimer’s Disease

9th week:
Lecture: Pharmacology of ANS drugs

10th week:

11th week:
Lecture: Drugs with important actions on smooth muscle. Local anesthetics.

12th week:
Lecture: Basic pharmacology

13th week:
Lecture: Cholinergic-activating drugs. Cholinoreceptor-blocking drugs.

14th week:
Lecture: Adrenoceptor-activating drugs. Adrenoceptor-blocking drugs.

15th week:
Lecture: Pharmacology of eye.
Requirements

During the semester students have to take two exams. Requirements for the signature of the Lecture Book for the semester are at least a pass (2) on both exams. Attendance at seminars is compulsory: the signature may be refused in the case of absences from more than four seminars. Signature is compulsory for the student to be allowed to take the End of Semester Exam (ESE). At the end of the semester from Pharmacology I. theory students take End of Semester Exam (ESE) which is oral. Students draw 3 exam titles from the topics of the first semester. During the semester there is an opportunity to be freed from the constraint of the End of Semester Exam. Without taking the exam, students are offered the grade calculated from the two exams passed during the semester if it is at least good (4) or excellent (5). Correction of the offered grade is in the form of taking the oral End of Semester Exam instead. The result of the exam can be better or even worse than the offered grade.

Department of Preventive Medicine, Faculty of Public Health

Subject: PREVENTIVE MEDICINE AND PUBLIC HEALTH
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: 30
Seminar: 22
Practical: 8

1st week:
Lecture: 1. The history, scope and methods of public health and preventive medicine, major public health issues in developing and developed countries 2. Introduction to human ecology

2nd week:
Lecture: 3. Air pollution and health 4. Water pollution and health
Seminar: 3-4. Demographic methods to study the health status of the population

3rd week:
Seminar: 5-6. Occupational health and safety in pharmacist practice.

4th week:
Lecture: 7. Health effects of the occupational environment. II. Toxicology of inorganic industrial toxicants 8. Health effects of the occupational environment. III. Toxicology of organic solvents and pesticides
Practical: 7-8. Chemical and microbiological examination of drinking water (laboratory practice for small groups)

5th week:
Lecture: 9. The general effect of environmental pollution 10. Lifestyle and health
Practical: 9-10. Chemical and microbiological examination of drinking water (laboratory practice for small groups)

6th week:
Seminar: 11-12. Mercury toxicity, case study

7th week:
### Requirements

#### Requirements for signing the lecture book

Attendance of lectures is highly recommended. Attendance of the seminars, practices and visits is obligatory. The head of the department can refuse to sign the lecture book if a student is absent more than two times from seminars (including visits) in the semester even if he/she has an acceptable excuse.

#### Requirements for the final exam

On the eighth week of the semester, writing a midterm test is obligatory. The midterm test consists of multiple choice questions covering the topics of the lectures, seminars and practices of the first 7 weeks. The grade of the midterm test is included into the assessment of the final mark of the subject. If the midterm test is failed, there is no possibility for repetition. The final exam involves written and oral sections covering the topics of all lectures and seminars of the subject. The oral exam covers the topics of all seminars and practices of the semester. The written exam consists of multiple choice test questions related to Environmental Health, Epidemiology and Health Policy. The final grade is assessed on the basis of the average of five marks and it is failed if either the oral or any part (Environmental Health, Epidemiology, Health Policy) of the written exam is graded unsatisfactory. Students should repeat only those section(s) of the final exam that has/have been previously unsuccessful. In this case the final exam is graded according to the average of the passing marks obtained on the first and repeated exams.

Course description
The course covers the main areas of public health: environmental health including the health consequences of air and water pollution, occupational and nutritional health; the principles of epidemiology, the epidemiology and control of communicable and non-communicable diseases. Special attention is given on the main topics underlying nutritional disorders and deficiencies, health hazards of pharmacist's practice and preventive strategies.

Requirements
To acquire knowledge about the principles and the most important issues of environmental health, communicable and non-communicable diseases and health policy.

Methods of education
The education of the subject is based on lectures, seminars, laboratory practices and visits. The practical adaptation of the topics of lectures are highly promoted by seminars. Students will learn about the major public health issues in developing and developed countries and organization of public health services. The practices are closely related to the environmental health part of the course. During the epidemiology seminars students will learn how to calculate the most important indicators for the measurement of morbidity and mortality. In addition, the epidemiology of communicable and non-communicable diseases will be discussed in detail.

Prerequisite:
immunology, pathology II.

Department of Biopharmacy
Subject: PHARMACEUTICAL BIOANALYTICS AND BIOTECHNOLOGY II.
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Lecture: 30
Practical: 60

1st week:
Lecture: Immunoanalytical methods I.: Southern-blotting, Northern-blotting, Western-blotting, dot-blot
Practical: Introduction, laboratory safety instructions.

2nd week:
Lecture: Immunoanalytical methods II.: RIA, ELISA, IHC.
Practical: Protein isolation

3rd week:
Lecture: Isolation of nucleic acids, types of gel electrophoresis, SCG, DNS-chip, Comet assay.
Practical: Protein isolation

4th week:
Lecture: PCR, RT-PCR: basic principles and practical applications.
Practical: Western-blot

5th week:
Practical: Western-blot

6th week:
Lecture: Basic principles of proteomics, applications in medical and pharmaceutical research.
Practical: Isolation of nucleic acids, agarose gel electrophoresis.
CHAPTER 19

7th week:
Lecture: Basics and application in the pharmaceutical research and clinical diagnosis.
Practical: Isolation of nucleic acids, agarose gel electrophoresis.
Self Control Test

8th week:
Lecture: Analytical techniques in clinical diagnosis of selected diseases, laboratory tests.
Practical: Immunohistochemistry.

9th week:
Lecture: Therapeutic Drug Monitoring.
Practical: TLC

10th week:
Lecture: Toxicology. Instrumental analysis of some selected drugs.
Practical: RIA.

11th week:
Lecture: Bioanalysis: the role and importance of bioanalytical experiments in drug research and drug development.
Practical: PCR, RT-PCR.

12th week:
Lecture: Analytical aspects of quality insurance in the pharmaceutical industry.
Practical: ELISA

13th week:
Lecture: Analytical aspects of human drug development.
Practical: GC-MS (demonstration)

14th week:
Lecture: Environmental rules, prescriptions and applied analytical methods and techniques in the pharmaceutical industry.
Practical: Microarray.

15th week:
Lecture: Self Control Test
Self Control Test

Requirements

At least 30 % of the lectures must be visited. Students have to write two control test, on 7th, and 15th week. If the results of the tests will not be at least 60%, the students will not be able to take oral exam.

Absence of more than one practice is not allowed during the semester. The missed practice can be made up exclusively on the 14th week of the semester. Only students having adequately fulfilled the requirements of practice are allowed to get the signature and to take the final oral exam.

Department of Internal Medicine

Subject: CLINICAL BASICS
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Lecture: 65
Seminar: 30

1st week:
Lecture: INTERNAL MEDICINE1.
Autoimmune diseases. 2. Inflammatory lung disease. 3. Asthma bronchiale, chronic bronchitis, emphysema. 4. Pulmonary tumour. 5. Type I, II diabetes mellitus and its treatment.

2nd week:
3rd week:

4th week:

5th week:

6th week:

7th week:
**Lecture:** 31. Inherited and acquired haemophilias. 32. Thromboembolism. 33. Acute and chronic leukaemia. 34. Anaemias. 35. Hodgkin and non-Hodgkin lymphoma.

8th week:

9th week:
**Lecture:** 41. Nephrology. 42. Vomiting and diarrhoea in 1st year of life. 43. Cardiology. 44. Haematology. 45. Neurology.

10th week:
**Lecture:** 46. Congenital development disorder. 47. Growing and mental development in the 1st years of childhood. 48. Antibiotic therapy in early age. 49. Allergy. 50. Respiratory organs diseases in early age.

11th week:
**Lecture:** NEUROLOGY, PSYCHIATRY 51. Epilepsy. 52. Headache. 53. Stroke.

12th week:
**Lecture:** 54-55. Cancer of CNS. (NEUROSURGERY)

13th week:
**Lecture:** 56. Alcohol and drug dependences. 57. Depressive and panic diseases. 58. Drugs and therapy in psychiatry.

14th week:

15th week:
**Lecture:** 64. Disorders in puberty. Normal pregnancy, prenatal care. 65. Problems of menstruation. Sterility and hormone therapy. 66. Benign and malignancy tumour of the female reproductive organs.

Self Control Test
CHAPTER 19

Department of Medical Microbiology

Subject: MEDICAL MICROBIOLOGY II.
Year, Semester: 4th year/2nd semester
Number of teaching hours: Lecture: 15 Seminar: 15

1st week:

2nd week:
Lecture: Human pathogenic protozoa II. Seminar: Antiprotozoal drugs.

3rd week:
Lecture: Medically important cestodes and trematodes. Seminar: Antihelminthic drugs I.

4th week:
Lecture: Medically important nematodes. Seminar: Antihelmintic drugs II. Drugs against ectoparasites.

5th week:

6th week:

7th week:
Lecture: Herpesviruses. Seminar: Treatment and vaccination of herpes infections.

8th week:
Lecture: Hepatitis viruses. Seminar: Treatment, vaccination and diagnosis of viral hepatitis.

9th week:
Lecture: DNA viruses: Adeno, Parvo, Papilloma, Pox Seminar: Congenital and neonatal virus infection.

10th week:
Lecture: Medically important RNA viruses. Seminar: Treatment and vaccination of respiratory viruses.

11th week:
Lecture: Medically important arbo and robo viruses. Seminar: Diagnosis of enteric viral infections.

12th week:
Lecture: HIV virus Seminar: Opportunistic infections.

13th week:
Lecture: Prions Seminar: Microbial control of pharmaceutical products.

14th week:

15th week:
Lecture: Consultation. Seminar: Consultation.

Requirements
Participation in the practical courses and seminars is obligatory. The Department may refuse to sign
the students' Lecture book if they are absent from more than two practices or seminars in a semester. At the end of the 2nd semester the student is required to take a final examination based on the whole material taught in the Medical Microbiology course. The final examination consists of a written test and oral examination.

Department of Pharmaceutical Surveillance and Economics

Subject: **PHARMACEUTICAL MANAGEMENT AND ORGANIZATION**
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Lecture: 30

1st week:
**Lecture:** The surrounding health system around the Hungarian Pharmacy. Drug consumption and sales. The top pharmaceutical companies and their top products, Drug consumption in Hungary in an international comparison.

2nd week:
**Lecture:** The preclinical and clinical phases of the drug research and development Generics, bioequivalence studies.

3rd week:
**Lecture:** Health financing and the drug reimbursement system. Pharmacy reimbursement. The structure of the drug prices. Something about quality assurance: GMP, GLP, GCP, GPP.

4th week:
**Lecture:** Drug utilization, its advantages, the ATC system, DDD, DOT. The wholesalers. The pharmacy sales.

5th week:
**Lecture:** The legal behind of the Pharmacy system, Drug registration. The roles of the Health Authorities and the National Pharmacy Officer.

6th week:
**Lecture:** Basics of drug economy and the Evidence Based Medicine. The professional organisations in the Pharmacy system.

7th week:
**Lecture:** Drug marketing. Life cycle of the drugs. Generics. OTC drugs.

8th week:
**Lecture:** Drug information, advertisement, medical and pharmacy representatives. Pharmaceutical Care. Ethical issues in the pharmaceutical care. Ethical Codex. Pharmacovigilance.

Requirements

Concerning attendance of classes, the rules in the Regulations Governing Admission, Education and Examinations of the University of Debrecen are valid.

Conditions of signing the lecture book (by the end of semester): Participation in at least three (3) of 6 interim tests are required for the signature. Those ones who failed will be required to pass the "end of semester test" in order to obtain signatures.

Exam (semifinal, kollokvium)
The exam will be written and oral exam at the end of the semester which covers all the topics of the semester taken in the lectures or seminars. Written part includes a TEST (single choice, multiple choice, short description or definitions, etc.) and an Oral part (Two topics from selected list of questions provided.) Grade (semifinal mark) The average of the three scores (Test, Topic-1 Topic-
2) compose the final mark (1-5 grades). Exemption (full or partial) may be earned - only for those student who had at least 5 tests taken successfully during the semester and reached at least 70%.

Department of Pharmaceutical Technology

Subject: **INDUSTRIAL PHARMACEUTICAL TECHNOLOGY**
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Lecture: 30
Seminar: 15

1st week:
Lecture: Treatment of working atmospheres
Filtration of working atmospheres

2nd week:
Lecture: Iso-technology

3rd week:
Lecture: Dissolution Lyophilization

4th week:
Lecture: Filtration of liquids Sterilization

5th week:
Lecture: Solid Forms I. Mixing process

6th week:
Lecture: Solid Forms II: Conversion into dosage form.

7th week:
Lecture: Semi-Solid Forms I. Soft gelatin capsules

8th week:
Lecture: Packaging

9th week:
Lecture: Liquid Forms I. Content of liquid forms

10th week:
Lecture: Materials of containers for liquid forms

11th week:
Lecture: Liquid Forms II. Preparation of liquid forms

12th week:
Lecture: Filling of liquid forms Design of production plants

13th week:
Lecture: Semi-Solid Forms II. Transdermal systems

14th week:
Lecture: Suppositories

15th week:
Lecture: consultation

**Requirements**

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.
Department of Pharmacology

Subject: **PHARMACEUTICAL AND BIOANALYTICAL CHEMISTRY II.**
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Lecture: **30**
Practical: **60**

1st week:
**Lecture:** The fate of the drugs in the body (ADMER).
**Practical:** Introduction, laboratory safety instructions.

2nd week:
**Lecture:** Bioanalysis in the pharmaceutical industry.
**Practical:** Gas chromatography (GC): analysis of alcohols.

3rd week:
**Lecture:** Techniques used for modeling oxidative and non-oxidative drug metabolism.
**Practical:** Infrared spectroscopy (IR)

4th week:
**Lecture:** In vitro and ex vivo techniques in the drug metabolism studies.
**Practical:** High Performance Liquid Chromatography (HPLC).

5th week:
**Lecture:** Determination of drug protein binding.
**Practical:** Mass spectrometry (DI-EI-MS): structural analysis of small organic compounds.

6th week:
**Lecture:** Antioxidants, antioxidant assays.
**Practical:** Ultraviolet-Visible (UV-VIS) spectrophotometry.

7th week:
**Lecture:** 1st self-control.
**Practical:** Sample preparation (LLE, CLLE, SPE, MEPS).

Self Control Test

8th week:
**Lecture:** MS in bioanalysis. Basic principles.

9th week:
**Lecture:** Therapeutic Drug Monitoring.
**Practical:** Measurement of heart function, determination of infarct size.

10th week:
**Lecture:** Hyphenated techniques (GC-MS, LC-MS, SFC-MS, MS-MS).
**Practical:** GC-MS: determination of malondialdehyde.

11th week:
**Lecture:** Toxicology. Instrumental analysis of some selected drugs
**Practical:** Modeling drug metabolism: EC-MS, Fenton-reaction).

12th week:
**Lecture:** Analytical aspects of human drug development.
**Practical:** GC-II: determination of solvent traces.

13th week:
**Lecture:** Validation of analytical and bioanalytical methods.
**Practical:** LC-MS/MS

14th week:
**Lecture:** 2nd Self-control test.
**Practical:** Self-control test.

Self Control Test

15th week:
**Lecture:** Consultation.
**Practical:** Consultation.
CHAPTER 19

Requirements

At least 30% of the lectures must be visited. Students have to write each of the two control tests and one from the practice. The requirements for the signature: I. the average of the self control tests from the theory must be minimum 40%. II. The result of the practice test must be minimum 60%!

Subject: PHARMACOLOGY PRACTICE II.
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Practical: 60

1st week:
Practical: Introduction to Pharmacology II.

2nd week:
Practical: Experimental demonstration I.

3rd week:
Practical: Experimental demonstration II.

4th week:
Practical: Experimental demonstration III.

5th week:
Practical: Experimental demonstration IV.

6th week:
Practical: Antihypertensive agents

7th week:

8th week:
Practical: The gonadal hormones and inhibitors. Uterotonics, tocolytics. Agents that affect bone mineral homeostasis. Thyroid and antithyroid drugs.

9th week:
Practical: Drugs used in acid-peptic disease.

10th week:

11th week:
Practical: Histamine and antihistaminic drugs. Serotonin, agonists and antagonists.

12th week:

13th week:
Practical: Immunpharmacology

14th week:
Practical: Cancer chemotherapy

15th week:
Practical: General consultation on the curriculum of the second semester

Requirements

During the semester students have to take two exams. Requirements for the signature of the Lecture Book for the semester are at least a pass (2) on both exams. Attendance at seminars is compulsory:
the signature may be refused in the case of absences from more than four seminars. Signature is compulsory for the student to be allowed to take the Final Exam (FE).

The average of the two mid-semester exams provides the grade of the Assessment of Workmanship (AW5) for the Pharmacology II. practice. In case the student does not reach a pass (2) on both mid-semester exams, the signature of the lecture book is refused, and the student fails the semester. In case the student does not reach a pass (2) on one of the mid-semester exams, the student must take a correction exam from all the topics of the semester on the last week of the semester. The grade of the correction exam will be averaged with the two mid-semester exams and this average will give the grade of the Assessment of Workmanship (AW5) for the Pharmacology II. practice. Further correction of this AW5 grade is not an option.

Subject: **PHARMACOLOGY THEORY II.**

Year, Semester: 4th year/2nd semester

Number of teaching hours:

Lecture: **60**

1st week:

**Lecture:** Myocardial ischemia, antianginal drugs. Drugs used in heart failure.

2nd week:

**Lecture:** Agents used in cardiac arrhythmias

3rd week:

**Lecture:** Antihypertensive agents. Agents used in hyperlipidemia

4th week:

**Lecture:** Bronchodilators and other agents used in asthma.

5th week:

**Lecture:** Diuretics and antidiuretics. Drugs used in disorders of coagulation.

6th week:

**Lecture:** Introduction to the pharmacology of the endocrinology. Hypothalamic and pituitary hormones.

7th week:

**Lecture:** Diabetes mellitus and antidiabetic drugs. General characteristics of steroid hormones. Adrenocorticosteroids and adrenocortical antagonists.

8th week:

**Lecture:** The gonadal hormones and inhibitors.

9th week:

**Lecture:** Uterotonics, tocolytics. Agents that affect bone mineral homeostasis. Thyroid and antithyroid drugs.

10th week:

11th week:

**Lecture:** Pharmacology of the inflammation, steroid and non-steroid anti-inflammatory drugs, the ergot alkaloids. Pharmacotherapy of rheumatoid arthritis.

12th week:

**Lecture:** Beta-lactam antibiotics. Chloramphenicol, tetracyclines, aminoglycosides. Macrolides. Quinolones. Antiviral chemotherapy and prophylaxis.
CHAPTER 19

13th week:
Lecture: Immunpharmacology

14th week:
Lecture: Cancer chemotherapy

15th week:
Lecture: Toxicology

Requirements

During the semester students have to take two exams. Requirements for the signature of the Lecture Book for the semester are at least a pass (2) on both exams. Attendance at seminars is compulsory: the signature may be refused in the case of absences from more than four seminars. Signature is compulsory for the student to be allowed to take the Final Exam (FE).

At the end of the semester from Pharmacology II. theory students take Final Exam (FE) which is oral. Students draw 2 exam titles from the topics of the second semester and 1 exam title from the topics of the first semester.

Institute of Behavioural Sciences, Faculty of Public Health

Subject: BIOETHICS
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Lecture: 30

1st week:
Lecture: The concept of bioethics. The distinction between traditional medical ethics and modern bioethics: (1) wider scope and (2) new (society- and patient-oriented) attitude. The emergence of bioethics and the major (social, historical, scientific and philosophical) factors playing central roles in it. Bioethics and pharmacology.

2nd week:
Lecture: The four basic principles of bioethics: (1) nonmaleficence; (2) beneficience; (3) autonomy; (4) justice. The importance of antipaternalism. The role of classic or modern medical oaths in bioethics. International declarations regarding medical and pharmacological ethics.

3rd week:
Lecture: Patients' rights. The importance of the patients-oriented approach. The Hungarian legal regulations of patients' rights in the light of an international comparison.

4th week:
Lecture: The principle of informed consent. The different aspects of providing appropriate information to patients. Theory and practice of risk communication. The bioethics of the so-called Evidence-Based-Medicine.

5th week:
Lecture: The ethics of scientific research and publications. The very basics of philosophy of science. The ethical problems raised by the recent tendency of commercialization of scientific, medical and pharmaceutical research. The ethical problems of scientific openness. Public vs. private scientific research. The ethics of scientific research and publication in the special area of pharmaceutical research. The ethical relevance of the so-called conflict of interests (a central problem of current bioethics).

6th week:
Lecture: Ethical questions of advertisement of medical tools (drugs etc.). Drugs in the market. The special ethical questions regarding direct-to-consumer (DST) advertisements.
### 7th week:
**Lecture:** The ethics of current biotechnology. Various ethical questions raised by recent and future advances of genetics, robotics, nanotechnology, pharmacology and brain-sciences.

### 8th week:

### 9th week:
**Lecture:** The ethical aspects of medical experiments of non-human animals. The possibility of extrapolations of the results of animal experiments to human anatomical, physiological and mental phenomena in the lights of current evolutionary theory. The essential ethical questions concerning the ethical acceptibility of animal experimentations in medical and pharmaceutical research. The history of animal well-being, animal liberation and animal rights (as well as environmental ethics) movements.

### 10th week:
**Lecture:** Psychiatric ethics/neuroethics. The different approaches to diseases. (What is a disease? What is normal?) How can we make a difference between medically normal and abnormal people? Introduction to philosophy of medicine.

### 11th week:
**Lecture:** The distinction between therapy and enhancement: one of the central topics of current bioethics (with a special emphasis on pharmacological ethics).

### 12th week:
**Lecture:** Ethical questions of current reproductive technologies. The ethics of abortion and infanticide. Where human life begins?

### 13th week:
**Lecture:** End-of-life decisions in current bioethics. Ethical questions concerning death, living will, transplantations, euthanasia, physician-assisted suicide and hospices. The right to die debate. Current neuroscience and bioethics.

### 14th week:
**Lecture:** The justice-principle. Questions about local and global justice in medicine (with special attention to pharmacological aspects). What does just allocation of constrained resources mean? Should we provide poor countries with expensive life-saving drugs? The effects of globalization on bioethics/pharmacological ethics.

### 15th week:
**Lecture:** Written exam.

### Requirements

Attendance in the lectures is required. Usable understanding of the core theoretical concepts and conceptions is required as well as the knowledge on the actual patients’ rights regulation.
CHAPTER 20
ACADEMIC PROGRAM FOR THE 5TH YEAR

Department of Biopharmacy

Subject: BIOPHARMACY
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: 30
Practical: 30

1st week:
Lecture: Fundamentals to biopharmacy.
Practical: Basic pharmacokinetic parameters.

2nd week:
Lecture: The LADMER system and its components.
Practical: Volume of Distribution, Clearance, Half-life.

3rd week:
Lecture: Liberation, absorption, distribution, metabolism, elimination, response.
Practical: One-compartment open model.

4th week:
Lecture: Drug release from the delivery system, bioavailability of the drug at the absorption site.
Practical: Continuous and intermittent drug delivery.

5th week:
Lecture: Drug clearance, hepatic drug elimination, renal drug elimination.
Practical: Equations, pharmacokinetic calculations.

6th week:
Lecture: Drug transport. Active and passive transport.
Practical: Equations, pharmacokinetic calculations II.

7th week:
Lecture: Type of drug delivery systems.
Practical: Equations, pharmacokinetic calculations III.

8th week:
Lecture: Biopharmacy of tables and capsules.
Practical: Equations, pharmacokinetic calculations IV.

9th week:
Lecture: Oral controlled release.
Practical: Equations, pharmacokinetic calculations V.

10th week:
Lecture: Delivering drugs by inhalation.
Practical: Equations, pharmacokinetic calculations VI.

11th week:
Lecture: Transdermal system.
Practical: Equations, pharmacokinetic calculations VII.

12th week:
Lecture: Time-programmed and patient-controlled drug delivery.
Practical: Equations, pharmacokinetic calculations VIII.

13th week:
Lecture: Smart drug delivery system and targeted therapy.
Practical: Equations, pharmacokinetic calculations IX.

14th week:
Lecture: Pharmaceutical biotechnology.
Practical: End of semester control test
Requirements

At least 30% of the lectures must be visited. Students have to write end of semester control test. If the result of the test will not be at least 60%, the students will not be able to take oral exam. Absence of more than one practice is not allowed during the semester. The missed practice can be made up exclusively on the 14th week of the semester. Only students having adequately fulfilled the requirements of practice are allowed to get the signature and to take the final oral exam.

Subject: PHARMACEUTICAL CARE
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: 30

1st week:
Lecture: Pharmaceutical care (history, subject, theory, basic)

2nd week:
Lecture: Medication therapy management (subject, concept, theory)

3rd week:
Lecture: International pharmaceutical care protocols

4th week:
Lecture: Pharmaceutical care in Metabolic Syndrome

5th week:
Lecture: Diabetes prevention and pharm. care

6th week:
Lecture: Dyslipidemia and hypertension

7th week:
Lecture: Practice and theory of cholesterol, glucose, INR, and blood pressure measurement I.

8th week:
Lecture: Practice and theory of cholesterol, glucose, INR, and blood pressure measurement II.

9th week:
Lecture: Nutrition, diet and pharm. care I (theory, BMI, calculations, prevention, nutrition piramid)

10th week:
Lecture: Nutrition, diet and pharm. care II (special diet and nutrition, special diet in metabolic syndrome and in oncology patients)

11th week:
Lecture: Pharmaceutical care and it’s limitation (in cold, cough, flu, upper respiratory problems, fever, sunburn etc.)

12th week:
Lecture: Asthma, COPD and special inhalation medication.

13th week:
Lecture: Pharmaceutical care in reflux problems, heart burn, etc.

14th week:
Lecture: Pharm. care in hemostasis (coagulation, measurement etc.)

15th week:
Lecture: Consultation

Requirements

At least 30% of the lectures must be visited. The missed lectures can be made up exclusively on the 14th week of the semester. Only students having adequately fulfilled the requirements are allowed...
to get the signature and to take the final exam.

Department of Clinical Pharmacology

Subject: CLINICAL PHARMACOLOGY
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: 30

1st week:
Lecture: Basic principles of Clinical Pharmacology.

2nd week:
Lecture: Ethical and legal aspects.

3rd week:
Lecture: The study phases (I-II).

4th week:
Lecture: The study phases (III-IV).

5th week:
Lecture: The clinical trial protocol.

6th week:
Lecture: The GCP requirements in Clinical Pharmacology.

7th week:
Lecture: Study Report (Clinical, Final).

8th week:

9th week:

10th week:
Lecture: Adverse events, serious adverse events, side effect.

11th week:
Lecture: Patient Information and Informed Consent.

12th week:
Lecture: Practical experience in an ongoing study.

13th week:
Lecture: Visit of a pharmaceutical company.

Requirements

The aim of this course is to introduce the students into a rapidly developing and evolving subject. Clinical Pharmacology is not merely a link between Pharmacology and Clinical Medicine. The objective is to enhance the understanding of how drugs act and may be best used in the clinic, how compounds are transformed into drugs, how clinical trials are conducted.

Requirements of admission: after 4 years of pharmaceutical or medical studies

Speakers:
Miklós Bodor, M.D.,Ph.D., Associate Professor, Head of the Division of Clinical Pharmacology
Péter Kovács, M.D.,Ph.D.,Dsc, Professor in Pharmacology
Sándor Somodi, M.D.,Ph.D., Assistant Professor
ACADEMIC PROGRAM FOR THE 5TH YEAR

**Required infrastructure:** lecture hall, library

**Examination:** oral and written

**Literature:** special papers and handbooks will be provided

**Department of Environmental Physics of University of Debrecen and ATOMKI**

Subject: **RADIOPHARMACY PRACTICE**  
Year, Semester: 5th year/1st semester  
Number of teaching hours:  
Practical: **18**

**Requirements**

Practice: (i) main rules of radiation protection, (ii) activity calculation, (iii) gamma-spectrometry, (iv) iodine capsules and technetium generators, (v) visit in the PET centres, (vi) radio-HPLC methods.

Subject: **RADIOPHARMACY THEORY**  
Year, Semester: 5th year/1st semester  
Number of teaching hours:  
Lecture: **15**

1st week:  
Lecture: Radionuclides and radioactive tracking in the living organs - nuclear medicine.

2nd week:  
Lecture: Radiation properties of radionuclides for diagnosis and therapy. Dosimetry.

3rd week:  
Lecture: In vivo radioisotope diagnostics in humans.

4th week:  
Lecture: Radionuclide therapy as human treatment.

5th week:  
Lecture: General methods of radioisotope manufacturing.

6th week:  
Lecture: Radionuclide generators and applications.

7th week:  
Lecture: Preparation of radiopharmaceuticals used in nuclear medicine, quality assurance, GMP

8th week:  
Lecture: Advantage and disadvantages of radiopharmaceutical kit formulation. The Nuclear Pharmacy concept.

9th week:  
Lecture: Preparation and use of radiopharmaceuticals with positron emitters (F-18, C-11, N-13, O-15).

10th week:  
Lecture: Radioactive noble gases (Kr-81m, Xe-133) and I-123 as well as I-131 labelled radiopharmaceuticals.

11th week:  
Lecture: Anionic Tc-99m complexes for renal,
bone and hepatobiliar investigations.

12th week:
Lecture: Neutral and cationic Tc-99m complexes; brain and heart imaging.

13th week:
Lecture: Preparation and use of Tc-99m labelled macromolecules and radiocolloids; blood cell labelling.

14th week:
Lecture: Other radioactive metals in diagnostic radiopharmaceuticals (Cr-51, Ga-67, In-111, Tl-201).

15th week:

Requirements

Radioactive tracers: types of radiations, radioisotope preparations, decay rows, generator systems, GMP productions. The Mo-99/Tc-99m generator and other generators.

(See also reading material, Gopal B. Saha: Fundamentals of Nuclear Pharmacy, Springer 2010, sixth edition)

Department of Pharmaceutical Chemistry

Subject: QUALITY CONTROL
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: 30

1st week:

2nd week:

3rd week:

4th week:
Lecture: Relationship between the elements of quality management, QA, GMP and QC. The GXP system for drug production and distribution. Good Pharmacy Practice (GPP).
Requirements

Within the pharmaceutical industry, quality is the key issue that has to be addressed above all others. It is the reason that so many regulations, guidelines and controls are important and applied. The course "Quality assurance" deals with quality in its widest sense, reviewing the International Standards Organization (ISO) series of standards, generic instruments such as Total Quality Management (TQM) and industry-specific topics like Good Manufacturing Practice (GMP). The conduct of pre-clinical and clinical studies of drug-candidates is controlled by a variety of regulations and guidelines known collectively as Good Laboratory Practice (GLP) and Good Clinical Practice (GCP), respectively. The assurance of safety and efficacy of pharmaceuticals from the time they leave the factory to the point at which they are used by the patient is the concept of
Good Distribution Practice (GDP) and Good Pharmacy Practice (GPP), which latter is also essentially obliged to take care of patients under physician-controlled- and self-medication.

**Examination:** written

### Department of Pharmaceutical Surveillance and Economics

**Subject:** PHARMACOVIGILANCE  
**Year, Semester:** 5th year/1st semester  
**Number of teaching hours:**  
**Lecture:** **20**  
**Seminar:** **10**

| 1st week: | Lecture: The concept and basic definitions in Pharmacovigilance. The tools and guidelines for agencies and for international cooperation. |
| 3rd week: | Lecture: The process of safety reporting. Roles, responsibilities and participants of the national and EU pharmacovigilance systems. The effects of GPP on public health and economy. |
| 4th week: | Lecture: Classification of side effects, adverse drug reactions. Drug and food interactions. |

### Requirements

Concerning attendance of classes, the rules in the Regulations Governing Admission, Education and Examinations of the University of Debrecen are valid.  
Conditions of signing the lecture book (by the end of semester): Participation in at least three (3) of the interim tests are required for the signature. The ones who failed will be required to pass the "end of semester test" in order to obtain signatures.

**Exam (semifinal)**  
The exam will be written and oral exam at the end of the semester which covers all the topics of the semester taken in the lectures or seminars. Written part (TEST (single choice, multiple choice, short description or definitions, etc.) and an Oral part (Two topics from selected list of questions provided.) Grade (semifinal mark) The average of the three scores (Test, Topic-1 Topic-2) compose the final mark (1-5 grades).  
Exemption (full or partial) may be earned - only for those student who had at least 70%, can be eligible to submit an: I.) Oral presentation or a II.) Written assay of selected topics.
Department of Pharmaceutical Technology

Subject: CLINICAL PHARMACY
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: 30
Seminar: 40

1st week:
Lecture: Introduction, definitions. Basic principles. What is Clinical Pharmacy?
Seminar: Introduction, general information.

2nd week:
Seminar: Adverse drug events, side effects I.

3rd week:
Lecture: The role of clinical pharmacist in a patient treatment.
Seminar: Adverse drug events, side effects II.

4th week:
Lecture: Therapeutic drug monitoring.
Seminar: Adverse drug events, side effects III.

5th week:
Seminar: Adverse drug events, side effects IV.

6th week:
Seminar: Adverse drug events, side effects V.

7th week:
Lecture: Compliance, non-compliance.

Pharmaceutical Care.
Seminar: Pharmaceutical care I.

8th week:
Lecture: GCP
Seminar: Pharmaceutical care II.

9th week:
Lecture: Evidence based medicine.
Seminar: Pharmaceutical care III.

10th week:
Lecture: Pharmacovigilance
Seminar: Pharmaceutical care IV.

11th week:
Lecture: Wound management
Seminar: Pharmaceutical care V.

12th week:
Lecture: Quality assurance in Health Care System
Seminar: On ward visiting I.

13th week:
Lecture: Infection control, prevention and surveillance
Seminar: On ward visiting II.

14th week:
Seminar: On ward visiting III.

15th week:
Lecture: Consultation
Seminar: Consultation.
Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.

Subject: **DRUG INTERACTIONS THEORY**
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: **30**

| 1st week: | CNS drugs and interactions I. |

| 2nd week: | 8th week: |
| Lecture: Biotransformation, pharmacogenetics. Vaccination related interactions. |

| 9th week: | 10th week: |
| Lecture: NSAIDs- drug interactions. |

| 11th week: | 12th week: |
| Lecture: Interactions with sympathomimetics and antiasthmatics. |

| 13th week: | 14th week: |
| Lecture: Cardiovascular drug interactions I. |

| 15th week: | 16th week: |
| Lecture: Cardiovascular drug interactions II. |

| 17th week: | 18th week: |
| Lecture: Consultation. |

| 19th week: | 20th week: |
| Lecture: Consultation. |

| 21st week: | 22nd week: |
| Lecture: Consultation. |

Requirements

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.
Subject: PHARMACEUTICAL COMMUNICATION SKILLS
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: 15
Seminar: 5

1st week:
Practical: Verbal communication
different special situations

2nd week:
Practical: Verbal communication
different special situations

3rd week:
Practical: Non-verbal communication

4th week:
Practical: Non-verbal communication

5th week:
Practical: Metacommunication

6th week:
Practical: Metacommunication

7th week:
Practical: Problem solving lectures based on different special situations

8th week:
Practical: Problem solving lectures based on different special situations

9th week:
Practical: Problem solving lectures based on different special situations

10th week:
Practical: Problem solving lectures based on different special situations

11th week:
Practical: Problem solving lectures based on different special situations

12th week:
Practical: Problem solving lectures based on different special situations

13th week:
Practical: Problem solving lectures based on different special situations

14th week:
Practical: Problem solving lectures based on different special situations

15th week:
Practical: Test writing
Self Control Test

Requirements
Attendance in the lectures is required.
CHAPTER 21

REQUIRED ELECTIVE COURSES

Department of Applied Chemistry

Subject: PHARMACEUTICAL EXCIPIENTS
Year, Semester: 3rd year/2nd semester
Number of teaching hours: Lecture: 15

1st week:
Seminar: Basic standards of SI. Prefixes.
Measurements in pharmacy.

2nd week:
Seminar: Basic chemical calculations.

3rd week:
Seminar: Introduction to Polymer Chemistry.

4th week:
Seminar: Polymeric excipients, general characterization.

5th week:
Seminar: General view of a medicine. Active ingredients, excipients, contaminants.

6th week:
Seminar: Consultation, problem solving

7th week:
Seminar: Mid term test

8th week:
Seminar: Controlled drug release.

9th week:
Seminar: Fillers, solvents, emulsifiers.

10th week:
Seminar: Antioxidants, preservatives.

11th week:
Seminar: Aerosol propellants, colorants.

12th week:
Seminar: Materials for packaging.

13th week:
Seminar: Incompatibility.

14th week:
Seminar: Consultation, problem solving.

15th week:
Seminar: End-term test

Requirements
The presence of students at the seminar is obligatory and will be recorded. If the student is absent from more than 4 seminars, the semester will not be accepted. Evaluation is based on exam performance: mid-course and end-course written exams (50-50%). Detailed information will be given in the first lecture.
Department of Biochemistry and Molecular Biology

Subject: MOLECULAR MECHANISM OF DISEASES CONCERNING GREAT POPULATIONS
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Lecture: 25

1st week:
**Lecture:** Introduction to molecular medicine

2nd week:
**Lecture:** Genomic medicine

3rd week:
**Lecture:** Diabetes

4th week:
**Lecture:** Obesity

5th week:
**Lecture:** Vitamin D and immundefects

6th week:
**Lecture:** Cancer I.

7th week:
**Lecture:** Cancer II.

8th week:
**Lecture:** Cancer II.

9th week:
**Lecture:** Osteoporosis

10th week:
**Lecture:** Immunedeficiencies

Requirements

**Course content:**
Topics presented at the lectures (available at the website of the Department of Biochemistry and Molecular Biology.) [*Follow the link: Downloads - Education in English*]

**Attendance:**
Students are expected and required to attend all lectures of this course. No more than one unexcused absence is permitted. Students will fail the course on their second unexcused absence. Legitimate excuses should be presented in writing to the course administrator by the specified date.

**Grading policy:**
The final grade will be based on the final oral exam at the end of the semester. Students have to select one topic from the full list of course topics for their oral exam, and can sign up for the topic at the link below. The final sign-up sheet will be posted on the department web-site at the beginning of the exam period. **It will be your responsibility to contact the lecturer for the assignment, and for the date of the oral examination.** The course lecturers will assign scientific publications to the students based on the sign-up sheet. For the oral exam students are expected to prepare a short Powerpoint presentation (4-5 slides) based on the publication, and discuss the publication with the lecturer.

Please follow the announcements of the course administrator about exam dates or changes in the schedule on the bulletin board (LSB downstairs, 1corridor), and on the department
CHAPTER 21

Department of Biophysics and Cell Biology

Subject: COMPUTER SCIENCE
Year, Semester: 1st year/1st semester
Number of teaching hours:
Practical: 30

1st week:
Practical: Exemption Tests.

2nd week:
Practical: Word processor programs, MS Word
I. 1. File: save, save as, print, new document, open
2. Editing text 1: input letters, cursor, copy, paste, paste special, cut, move, clipboard, undo, redo
3. Editing text 2: selecting text, mouse, keyboard, shift, control, home, end, pgup, pgdown
4. Home 1: formatting font, font size, font color, typeface, bold, italic, underline, highlighting, super/subscript, customize menu
5. Home 2: formatting paragraph, line spacing, indentation (left, right, first line, hanging), alignment (Tabs: left, center)
6. Home 3: bulleted, numbered list, searching text, find, replace, select all
7. Insert: tables, inserting pictures, shapes, page numbers, header, footer, page break, symbols, (text box)
8. Page layout: margins, orientation, size, manual setting of margins, columns, line numbers, watermark, page color, page borders
9. References: table of contents
10. Review: Word count, Track changes
Extra Exemption test appointments ONLY for students with late registration!

3rd week:
Practical: Word processor programs, MS Word II.

4th week:
Practical: Word processor programs, MS Word III.

5th week:
Practical: Spreadsheets programs, MS Excel I.
1. Entering data (difference b/w text & numbers), autofill series (numbers, days, months, etc.), adjusting column width
2. Editing: copy, paste, move, inserting/deleting lines/rows, selecting non-adjacent rows/columns (Ctrl)
3. Entering formulas (=), symbols for mathematical operations (+-*^EXP()), copying cells with formulas, relative/absolute reference
4. Using functions, statistical functions: average, stdev, count, sqrt, countif, if, calculating SEM, etc.
5. Creating charts: bar chart, scatter plot, error bars, labels
6. Formatting charts: colors, symbols, axis scaling, chart title, axis title
7. Data sorting by one or more criteria, filters
8. (Statistical tests (F-test (equal variance test), t-test assuming equal/unequal variances))

6th week:
Practical: Spreadsheets programs, MS Excel II.

7th week:
Practical: Spreadsheets programs, MS Excel III.

8th week:
Practical: Spreadsheets programs, MS Excel IV.

9th week:
Practical: Computerised presentation, MS PowerPoint
1. Entering text, inserting figures / drawing objects
2. Editing: selecting multiple objects, resizing, rotating, copy, paste, move, undo, redo
3. Colors: background (templates), line, fill
4. Alignment, grouping, order (front/back), arranging objects (distribute horiz. / vert.)
5. Slide sorter, slide show
6. Slide transitions, animations

10th week:
Practical: Fundamentals and basic concepts of informatics.

11th week:
Practical: Logical and physical realization of networks.
### Required Elective Courses

<table>
<thead>
<tr>
<th>12th Week:</th>
<th>14th Week:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Practical: Internet.</td>
<td>15th Week:</td>
</tr>
<tr>
<td></td>
<td>Practical: Test I.</td>
</tr>
<tr>
<td><strong>13th Week:</strong></td>
<td></td>
</tr>
<tr>
<td>Practical: Summary.</td>
<td><strong>14th Week:</strong></td>
</tr>
<tr>
<td></td>
<td>Practical: Test II.</td>
</tr>
</tbody>
</table>

### Requirements

The acquisition of fundamental theoretical and practical knowledge from the function of the modern personal computers. Course description: PC architecture, operating systems, file management, network knowledge, internet and its opportunities of application, word processor, spreadsheet, the usage of presentational programs, the achievement of scientific databases and its use. Without registration, there is no way to do the course! First year students who missed/skipped the exemption test, but signed up for the course in the Neptun must attend the course and do the final test at the end. For students attending the informatics course a maximum of 4 absences are allowed during the semester to receive a signature (we recommend to use as few as possible, in case an emergency comes up). This is taken very seriously! Missing more than 4 classes automatically means losing the chance to pass the course. There will be a final test at the end of the semester. For students attending the informatics course a maximum of 4 absences are allowed during the semester to receive a signature (we recommend to use as few as possible, in case an emergency comes up). This is taken very seriously! Missing more than 4 classes automatically means losing the chance to pass the course. Every student allowed to make up the missed practicals with another group but only on the given week, if there are enough free seats in the room. The course start with an exemption test. Only first year students allowed to write the exemption test at the first week of the given semester with their group (appointment should be checked in the given timetable). In any other cases (students older than first year/repeaters/students who are not exempted) has a final test at week 14 of the given semester. There is no other self control test during the semester. At the end of the course students will write a final test. The exemption and the final tests covers topics and skills in connection with Microsoft office Word, Excel, and PowerPoint (versions:2007/2010) programs, as written in the curriculum. Both of the tests (exemption and the final test) are written tests. The tests are practical tests, conducted in the computer room. Students passing the exemption test will automatically receive 5 (excellent) grade at the end of the semester.

Final grades based on the final test score will be given according to the following table:

<table>
<thead>
<tr>
<th>Percentage</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>61% - 65%</td>
<td>1 (fail)</td>
</tr>
<tr>
<td>66% - 70%</td>
<td>2 (pass)</td>
</tr>
<tr>
<td>71% - 80%</td>
<td>3 (satisfactory)</td>
</tr>
<tr>
<td>81% - 90%</td>
<td>4 (good)</td>
</tr>
<tr>
<td>91% - 100%</td>
<td>5 (excellent)</td>
</tr>
</tbody>
</table>

Students should download free Office guide books from the following link. (Email registration is required for downloading files). Students who did not get exemption/did not show up at the exemption test/repeaters/students older than first year MUST ATTEND on the course. They should
join to one of the groups mentioned in the timetable. The number of the seats is limited in the classroom. Students who has informatics course in the given appointment (according to the timetable) have priority to attend the lesson. Others are allowed to join to the given group if there are more free seats. Older students have to do the whole course as well. Students passing the exemption test will automatically receive 5 (excellent) grade at the end of the semester. Students who failed the exemption test must attend the course and do the final test at the end. Students having ECDL (European Computer Driving License) are not required to write the exemption test, instead, they can submit exemption request to the Education Office. Until You are waiting for the decisions, You should also come to the course!!!

Subject: MODERN BIOPHYSICAL METHODS IN BIOLOGY AND MEDICINE
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Lecture: 24

3rd week:
Lecture: Medical applications of NMR and MRI.

4th week:
Lecture: Luminescence spectroscopy.
Theoretical background and principles of application of fluorescence spectroscopy to study the structure of proteins, nucleic acids and that of the cell membrane. Fluorescence conjugation of biomolecules, techniques based on fluorescence polarization and fluorescence resonance energy transfer.

5th week:

6th week:
Lecture: Principles and applications of flow cytometry. Structure of a flow cytometer and its application fields: immunogenetics, receptor and antigen research and diagnostics, DNA and cell cycle analysis, measurement of membrane potential, membrane permeability and determination of cytosolic pH and ion concentrations, application of fluorescence resonance energy transfer to determine protein associations. (FCET).

7th week:

8th week:
Lecture: Modern electrophysiological techniques. Passive and active electrical properties of the cell membrane, structure and function of ion channels. Principles and application of the patch clamp technique: recording ionic currents and membrane potential.

9th week:
Aim of the course:
Based on the principles covered in biophysics and cell biology discussion of problems with special relevance to medical biology from a modern molecular biophysical and quantitative biological aspect.

Short description of the course topics:

Compulsory literature:
Course material and lecture slides published on the website of the Department

Recommended reading:
Medical biophysics (Damjanovich, Fidy, Szöllősi Eds.), Medicina, 2009;

Type of examination: practical grade, 5 levels

Requirements:
Conditions for signing the lecture book: attending 5 lectures out of 7. Attention! Lecture books are handled exclusively by the study advisor during the dedicated office hours!

Repeated/improved exam: during the examination period, one occasion, written test.

Department of Emergency Medicine

Subject: FIRST AID AND REANIMATION
Year, Semester: 1st year/2nd semester
Number of teaching hours:
Lecture: 7
Practical: 8
1st week:  
Lecture: Definition of “first aid”; first aid levels; time factor; behavior of first responder in the field; the emergency call

2nd week:  
Lecture: Unconsciousness; airway obstruction; airway opening maneuvers.

3rd week:  
Lecture: Death as a process; determining of clinical death; the different oxygen demand of the brain depending on age; establishing unconsciousness or death; assessment of vital signs; assessment of breathing, circulation, pupils and muscle tone

4th week:  
Lecture: Reanimation on the spot – organization problems; the theory of CPR; complications during the CPR; effect, results and success during CPR

5th week:  
Lecture: Burning, first aid in burning diseases. shock.

6th week:  
Practical: AVPU, ABCDE approachment.

7th week:  
Practical: Recognition of unconsciousness, recovery position airway management.

8th week:  
Practical: Practicing the ventilation.

9th week:  
Practical: Complex CPR training, usage of AED.

10th week:  
Practical: Practical exam.

11th week:  
Practical: Types of bleeding, bleeding control, hypovolaemic shock, Trendelenburg position.

12th week:  
Practical: Distortions and extended soft-tissue injuries, bandage for fixation with special triangle, stifneck, dessault bandage, fixation of finger and hand fractures, usage of siplint.

13th week:  
Practical: Basic trauma care  
Self Control Test

14th week:  
Practical: Consultation, written test.  
Self Control Test

15th week:  
Lecture: Intoxication; guideline of poisoning in toxicology; typical intoxications, special signs, first aid

Requirements

Condition of signing the Lecture book:
Attendance at practices is compulsory. The tutor may refuse to sign the Lecture book if the student is absent from the practicals more than twice in a semester. Missed practicals should be made up after consultation with the tutor. Facilities for a maximum of 2 make-up practicals are available at the Simulation Center in Debrecen. The current knowledge of students will be tested twice in each semester driving a written test.
REQUARED ELECTIVE COURSES

Department of Inorganic and Analytical Chemistry

Subject: ENVIRONMENTAL ANALYTICAL CHEMISTRY
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: 45

Department of Pharmaceutical Chemistry

Subject: CHEMICAL BIOLOGY
Year, Semester: 3rd year/2nd semester
Number of teaching hours:
Lecture: 15

1st week:
Lecture: Structure of proteins and polysaccharides.

2nd week:
Lecture: Structure of nucleic acids

3rd week:
Lecture: Structure of macromolecular lipides. Interactions determinating the structure of macrolecules.

4th week:
Lecture: Chemical synthesis of peptides and proteines.

5th week:
Lecture: Chemical synthesis of polysaccharides.

6th week:
Lecture: Chemical synthesis of nucleic acids

7th week:
Lecture: Molecular biology as a tool of chemical biology.

8th week:
Lecture: Methodologies of molecular biology

9th week:
Lecture: Electron spectroscopy and vibrational spectroscopy in chemical biology

10th week:
Lecture: Basics of NMR spectroscopy

11th week:

12th week:
Lecture: The molecular recognition.

13th week:
Lecture: Mass spectrometry in chemical biology.

14th week:
Lecture: Case studies of chemical biology.

15th week:
Lecture: Case studies of chemical biology.

Requirements

The aim of the course is to treat the fundamentals of modern analytical and synthetic methodologies that can be applied in biological research.
CHAPTER 21

Requirements:
Good knowledge of basic organic chemistry.
Teaching material will be provided at the beginning of the course.

Subject: ILLICIT DRUGS
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Lecture: 15

Department of Pharmaceutical Surveillance and Economics

Subject: INTRODUCTION TO FINANCIAL MANAGEMENT FOR PHARMACISTS
Year, Semester: 3rd year/1st semester
Number of teaching hours:
Lecture: 12
Practical: 5

1st week:
Lecture: Models and the key elements of micro-economy, specific aspects of a market on price related to product characteristics and demand.

2nd week:
Lecture: Consumer decisions. Management of an investment: costs and margins. Calculations of ROI and IRR.

3rd week:
Lecture: Model for macroeconomy. National and international relations of goods, price and investments.

4th week:

5th week:
Lecture: Business aspects of a Pharmacy operation. Management in a pharmacy. The concepts and the most important cost categories and definitions, P/L and the balance sheet.

6th week:
Lecture: The operation, financial aspects of a pharmacy as a business unit. Revenue, costs and cash/flow.

7th week:
Seminar: Elements of a Business plan and C/F plans.

8th week:
Seminar: Calculations of an investment, plan for business development, expected revenue and return of investment in a Business plan and C/F in practice.

Requirements
Concerning attendance of classes, the rules in the Regulations Governing Admission, Education and Examinations of the University of Debrecen are valid.
Participation in at least three (3) of 6 interim tests are required for the signature. Those ones who
failed will be required to pass the "semifinal test" in order to obtain signatures.

Exam (semifinal, kollokvium)
The exam will be written and oral exam at the end of the semester which covers all the topics of the semester. Written part: Test and three topics from selected list of questions provided.
Grade (semifinal mark)
The average of the three scores (Test, Topics) compose the final mark (1-5 grades).

Subject: **INTRODUCTION TO PHARMACOECONOMY AND - EPIDEMIOLOGY**
Year, Semester: 3rd year/2nd semester
Number of teaching hours:
Lecture: 10
Seminar: 2

**Requirements**

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.
REQUIRED ELECTIVE COURSES

Subject: **DIETARY SUPPLEMENTS AND GENERAL NUTRIENTS**
Year, Semester: 4th year/2nd semester
Number of teaching hours: 
Lecture: **30**

Subject: **GALENIC PREPARATIONS**
Year, Semester: 5th year/1st semester
Number of teaching hours: 
Lecture: **30**

1st week:  
**Lecture:** Ointments

2nd week:  
**Lecture:** Suppositories

3rd week:  
**Lecture:** Solutions

4th week:  
**Lecture:** Suspensions

5th week:  
**Lecture:** Emulsions

6th week:  
**Lecture:** Official prescriptions 1-5

7th week:  
**Lecture:** Official prescriptions 5-10

8th week:  
**Lecture:** Official prescriptions 10-15

9th week:  
**Lecture:** Official prescriptions 10-15

10th week:  
**Lecture:** Official prescriptions 15-20

11th week:  
**Lecture:** Official prescriptions 20-25

12th week:  
**Lecture:** Official prescriptions 25-30

13th week:  
**Lecture:** Official prescriptions 30-35

14th week:  
**Lecture:** Official prescriptions 35-40

15th week:  
**Lecture:** consultation

**Requirements**

Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam.

Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.

Subject: **JURISTIC KNOWLEDGE FOR PHARMACISTS**
Year, Semester: 5th year/1st semester
Number of teaching hours: 
Lecture: **14**

1st week:  
**Lecture:** Introduction to Law – Norms, Mores

and Folkways, Defining Law
CHAPTER 21

2nd week: Lecture: Families of Law, Functions of Law, Classification of Law

3rd week: Lecture: Sources of Law, Principles for resolve conflicts of Law

4th week: Lecture: Interpretation of Law, Dispute resolution

5th week: Lecture: Law and Ethics in Pharmacy I. – The rights of the patient

6th week: Lecture: Law and Ethics in Pharmacy II. – Moral principles in medical practice, Ethical Codes for Pharmacists

7th week: Lecture: Health and Pharmaceutical Care, The 7 Star Pharmacist

8th week: Lecture: The Good Pharmacy Practice

9th week: Lecture: Pharmaceutical Legislation

10th week: Lecture: International Health Organisations

11th week: Lecture: Global Health Law I.

12th week: Lecture: Global Health Law II.

13th week: Lecture: Case Studies (Patient Rights, Ethics)

14th week: Lecture: consultation

15th week: Lecture: consultation

Requirements
Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.

Subject: NANOPHARMACEUTICS
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: 15

1st week: Lecture: Introduction. Nanotechnology and Nanomedicine

2nd week: Lecture: Investigation methods of nanotechnology and nanopharmaceutics.

**REQUIRED ELECTIVE COURSES**

Micellar systems, polymer micelles.

**7th week:**
**Lecture:** Nano-sized drug delivery systems 5. Antibodies and their conjugates.

**8th week:**
**Lecture:** Nano-sized drug delivery systems 6. Cyclodextrins.

**9th week:**
**Lecture:** Nano-sized drug delivery systems 7. Vectors for nucleic acid drug delivery.

**10th week:**
**Lecture:** Theranostics.

**11th week:**
**Lecture:** Pharmacokinetics and toxicology of nanopharmaceutics.

**12th week:**
**Lecture:** Interaction of nanopharmaceutics and biological barriers. Cellular internalization and intracellular behaviour of nanopharmaceutics.

**13th week:**
**Lecture:** Nanopharmaceutics: drugs in the therapy.

**14th week:**
**Lecture:** Consultation.

**15th week:**
**Lecture:** Test
**Self Control Test**

---

**Requirements**

Written test

Subject: **NUTRITIONAL THERAPY**
Year, Semester: 4th year/1st semester
Number of teaching hours:
Lecture: **15**

**1st week:**
**Lecture:** Introduction. Digestive and absorption problem of nutrients. Pathological definitions.

**2nd week:**
**Lecture:** Nutrition of newborns and infants. Metabolism and absorption disturbances.

**3rd week:**
**Lecture:** Type and composition of infant nutrition.

**4th week:**
**Lecture:** Classification of artificial nutrition. Percutan Endoscopic Gastrostomy.

**5th week:**
**Lecture:** Classification and composition of enteral nutrition products. Manufacturing requirements and release.

**6th week:**
**Lecture:** Determination of energy demand and nutrient requirement. Practice of Glicemic Index.

**7th week:**
**Lecture:** Fluid and electrolyte therapy. Rehydration in hospital and home.

**8th week:**
**Lecture:** Accessories and type of parenteral nutrition therapy.
**CHAPTER 21**

9th week:  
Lecture: Preparation of parenteral nutrition therapy.

10th week:  

11th week:  
Lecture: Lipid intake aspects.

12th week:  
Lecture: Protein intake aspects. Food allergy and food intolerance.

13th week:  
Lecture: Vitamins and trace elements intake aspects.

14th week:  
Lecture: Practice of enteral nutrition by other way. Cooking in the kitchen of Dietetic Service at Clinical Center.

15th week:  
Self Control Test

Requirements

Written test

Subject: OPERATING SYSTEM OF THE PHARMACEUTICAL INDUSTRY
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: 15

1st week:  
Lecture: Pharmaceutical quality system I.

2nd week:  
Lecture: Pharmaceutical quality system II.

3rd week:  
Lecture: Pharmaceutical industry and patent systems I.

4th week:  
Lecture: Pharmaceutical industry and patent systems II.

5th week:  
Lecture: CGMPs and the concepts of modern quality systems I.

6th week:  
Lecture: CGMPs and the concepts of modern quality systems II.

7th week:  
Lecture: Pharmaceutical computer systems I.

8th week:  
Lecture: Pharmaceutical computer systems II.

9th week:  
Lecture: Pharmaceutical GMP regulations I.

10th week:  
Lecture: Pharmaceutical GMP regulations II.

11th week:  
Lecture: Generics I.

12th week:  
Lecture: Generics II.

13th week:  
Lecture: Marketing

14th week:  
Lecture: Consultation
Requirements
Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam. Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.

Subject: PHARMACEUTICAL COMPUTER ADMINISTRATION
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Lecture: 30

1st week:
Lecture: Computer knowledge.

2nd week:
Lecture: Computer programs I.

3rd week:
Lecture: Computer programs II.

4th week:
Lecture: Computer programs in pharmacy I.

5th week:
Lecture: Computer programs in pharmacy II.

6th week:
Lecture: Computer programs in pharmacy III.

7th week:
Lecture: Computer programs in pharmacy IV.

8th week:
Lecture: Exam

9th week:
Lecture: Ordering program on computer (in pharmacy) I.

10th week:
Lecture: Ordering program on computer (in pharmacy) II.

11th week:
Lecture: Ordering program on computer (in pharmacy) III.

12th week:
Lecture: Administration on computer I.

13th week:
Lecture: Administration on computer II.

14th week:
Lecture: Consultation.

15th week:
Lecture: Exam

Requirements
Attendance of practicals is obligatory. Altogether two absences in the semester is permitted. After absence the practical should be made up. At the end of the semester students get 5-stage practical grade.
Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student is absent from the practicals more than allowed in a semester.
1st week:
**Lecture:** 1. Introduce pharmacy rooms. Division of pharmacy, instruments, equipments. 2. Storage of drug preparations, requirements. Chemical substances, drugs, galenicals, registered preparations, drugs with strong effect. Study those chemicals studied at the University, materials knowledge, nomenclature. 3. Reading of prescriptions, pharmaceutical Latin.

2nd week:
**Lecture:** 4. Instruments used in Pharmacy, pharmacy balances, small equipments etc. description, cleaning, maintenance. 5. Requirements for packaging of pharmaceutical preparations. Choosing the suitable containers. Packaging materials. Glass, plastic containers, closures. Signatures.

3rd week:
**Lecture:** 6. Simple processes of pharmaceutical technology (measuring, sieving, mixing of powders, dilution, concentration calculation of solutions, other simple calculations needed for pharmaceutical work). 7. Technical books of pharmacy. (H.Ph. VII., H.Ph.VIII., Eur. Ph. 7., FoNoVII.)

4th week:
**Lecture:** 8. Tests, investigations according to the Eur. Ph. 7.9. Connection with patients. Take part in pharmacy dispensing.
Subject: **STATE EXAM PRACTICE I. PHARMACY DISPENSING**  
Year, Semester: 5th year/1st semester  
Number of teaching hours:  
Practical: **120**

**Requirements**

Syllabus for the practice in a public pharmacy before final examination

Duration of the practice:  
2+4 months, 8 hours daily, from which two hours may be spent on preparing individually. Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Requirements for the student:  
Accept and sign the non-disclosure document. Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up. He/she is expected to follow the guidance of the pharmacist in charge of the training.

The expected skills made on the student after completion of the practice:  
• practical application of the theoretical knowledge obtained during his / her studies  
• the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies  
• he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
he/ she is expected to communicate with the patients in an appropriate way
he / she is required to appropriately inform and give advice in connection with the patients’
questions regarding self-healing and preparations without prescription (drugs and other products)
he / she is required to identify „problematic patients” from the point of view of communication
and to handle situations properly with help.

The student’s tasks during the practice:

Under the supervision and instructions of the pharmacist in charge of the training he / she
participates in the following activities:

1. Drug Dispense.
In the process he / she is required to learn:
• how to check the content and layout of the prescription
• the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of
international non-proprietary name
• appropriate patient information knowing the effects and adverse effects of drugs
• recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-
food, drug-food supplement)
• characteristic/obligatory cases and methods of medical information and consultation
• duties in connection with the known/identified adverse effects of drugs
• adherence control and means of correction, common uses
• the typical cases of self-healing, the dispensing of the preparations without prescription that can be
applied for this purpose
• the possibilities and rules of access to data regarding the patients’ previous medication (OEP
database)
• the database of nutrition complements and medicinal formulae
• proper application of the labelling and dispensing computer program.

2. Preparation of medicine. In the process he / she is required to learn:
• How to prepare magistral / individual formulations according to the rules and to recognize
incompatibilities
• The legal possibilities of changing the original prescription
• The rules of labelling and their application (identifiability of manufacturer and patient,
application, administration, shelf-life)
• Documentation of preparation, and administrative obligations
• Storage of materials, processing of basic formulations and subsequent administrative obligations
• Formulations of the compendium and FoNo

3. Operation, quality assurance. In the process he / she is required to learn:
• administrative work in the pharmacy
• the rules concerning the staff of the pharmacy; qualification, labor law requirements
• standard procedures for workflow
• how to check and document workflow
• the rules pertaining to the examining and sampling incoming medications
• documentation of examinations

4. Medication management.
In the process he / she is required to learn:
REQUIRED ELECTIVE COURSES

- aspects of inventory management
- how to order medicine
- duties in case of waste products, returned items, damage
- withdrawal of products from circulation
- duties regarding shift of prices
- closings: daily, weekly, periodic as well as schedule of OEP reports
- importance and practice of supervision of prescriptions
- about narcotics and activities involving their handling
- the rules pertaining to hazardous waste.

Evaluation:
Keeping an electronic workbook: the description of two practical problems in half/one page weekly. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean’s Office according to the rules of the place of training. The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student. At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place. Student evaluation: After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

Subject: STATE EXAM PRACTICE I. PRESCRIPTION PHARMACY
Year, Semester: 5th year/1st semester
Number of teaching hours:
Practical: 120

Requirements
Duration of the practice:
2+4 months, 8 hours daily, from which two hours may be spent on preparing individually. Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including: dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy.

Accept and sign the non-disclosure document.
Absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up.
  - he/she is expected to follow the guidance of the pharmacist in charge of the training
  - practical application of the theoretical knowledge obtained during his / her studies
CHAPTER 21

- the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies
- he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
- he/ she is expected to communicate with the patients in an appropriate way
- he / she is required to appropriately inform and give advice in connection with the patients’ questions regarding self-healing and preparations without prescription (drugs and other products)
- he / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help.

Under the supervision and instructions of the pharmacist in charge of the training he / she the following activities:

1. Drug Dispense.

In the process he / she is required to learn:

- how to check the content and layout of the prescription
- the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of international non-proprietary name
- appropriate patient information knowing the effects and adverse effects of drugs
- recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement)
- characteristic/obligatory cases and methods of medical information and consultation
- duties in connection with the known/identified adverse effects of drugs
- adherence control and means of correction, common uses
- the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose
- the possibilities and rules of access to data regarding the patients’ previous medication (OEP database)
- the database of nutrition complements and medicinal formulae
- proper application of the labelling and dispensing computer program.

2. Preparation of medicine. In the process he / she is required to learn:

- How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
- The legal possibilities of changing the original prescription
- The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
- Documentation of preparation, and administrative obligations
- Storage of materials, processing of basic formulations and subsequent administrative obligations
- Formulations of the compendium and FoNo

3. Operation, quality assurance. In the process he / she is required to learn:

- administrative work in the pharmacy
- the rules concerning the staff of the pharmacy; qualification, labor law requirements
- standard procedures for workflow
- how to check and document workflow
REQUIRED ELECTIVE COURSES

4. Medication management. In the process he / she is required to learn:
   - aspects of inventory management
   - how to order medicine
   - duties in case of waste products, returned items, damage
   - withdrawal of products from circulation
   - duties regarding shift of prices
   - closings: daily, weekly, periodic as well as schedule of OEP reports
   - importance and practice of supervision of prescriptions
   - about narcotics and activities involving their handling
   - the rules pertaining to hazardous waste

Keeping an electronic workbook:

The description of two practical problems in half/one page weekly. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean’s Office according to the rules of the place of training.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place.

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

Subject: STATE EXAM PRACTICE II. – PHARMACEUTICAL MANAGEMENT, QUALITY ASSURANCE
Year, Semester: 5th year/2nd semester
Number of teaching hours:
Practical: 60

Subject: STATE EXAM PRACTICE II. (PHARMACEUTICAL BUSINESS ADMINISTRATION)
Year, Semester: 5th year/2nd semester
Number of teaching hours:
Practical: 60
Requirements

Duration of the practice:
2+4 months, 8 hours daily, from which two hours may be spent on preparing individually.

Pharmacy students should gain experience on the following areas in a general pharmacy during their practice and subsequently acquire knowledge about pharmacy operation including:
- dispensing medication, preparing medication, validation and quality assurance, and the overall operation of the pharmacy
- accept and sign the non-disclosure document
- absence from practice must be authentically justified based on the rules of the place of training. Absences must be made up.

He/she is expected to follow the guidance of the pharmacist in charge of the training:
- practical application of the theoretical knowledge obtained during his / her studies
- the knowledge of the practical application of the rules and regulations concerning the operation of pharmacies
- he / she is required to have an appropriate working relationship with the co-workers at the pharmacy
- he/ she is expected to communicate with the patients in an appropriate way
- he / she is required to appropriately inform and give advice in connection with the patients’ questions regarding self-healing and preparations without prescription (drugs and other products)
- he / she is required to identify „problematic patients” from the point of view of communication and to handle situations properly with help.

Under the supervision and instructions of the pharmacist in charge of the training he / she the following activities:

1. Drug Dispense. In the process he / she is required to learn:
   - how to check the content and layout of the prescription
   - the application of the rules regarding the replacement of drugs, ordering of drugs on the basis of international non-proprietary name
   - appropriate patient information knowing the effects and adverse effects of drugs
   - recognition and evaluation of the characteristic interactions based on database (drug-drug, drug-food, drug-food supplement)
   - characteristic/obligatory cases and methods of medical information and consultation
   - duties in connection with the known/identified adverse effects of drugs
   - adherence control and means of correction, common uses
   - the typical cases of self-healing, the dispensing of the preparations without prescription that can be applied for this purpose
   - the possibilities and rules of access to data regarding the patients’ previous medication (OEP database)
REQUIRED ELECTIVE COURSES

- the database of nutrition complements and medicinal formulae
- proper application of the labelling and dispensing computer program.

2. Preparation of medicine. In the process he / she is required to learn:
   - How to prepare magistral / individual formulations according to the rules and to recognize incompatibilities
   - The legal possibilities of changing the original prescription
   - The rules of labelling and their application (identifiability of manufacturer and patient, application, administration, shelf-life)
   - Documentation of preparation, and administrative obligations
   - Storage of materials, processing of basic formulations and subsequent administrative obligations
   - Formulations of the compendium and FoNo

3. Operation, quality assurance. In the process he / she is required to learn:
   - administrative work in the pharmacy
   - the rules concerning the staff of the pharmacy; qualification, labor law requirements,
   - standard procedures for workflow
   - how to check and document workflow
   - the rules pertaining to the examining and sampling incoming medications
   - documentation of examinations

4. Medication management. In the process he / she is required to learn:
   - aspects of inventory management,
   - how to order medicine
   - duties in case of waste products, returned items, damage,
   - withdrawal of products from circulation
   - duties regarding shift of prices
   - closings: daily, weekly, periodic as well as schedule of OEP reports
   - importance and practice of supervision of prescriptions
   - about narcotics and activities involving their handling
   - the rules pertaining to hazardous waste.

Keeping an electronic workbook:

The description of two practical problems in half/one page weekly. One of them should describe a question related to the patient (dispensing drugs), the other topic can be chosen from the three other areas (preparation of medicine, operation, medication management). The descriptions made during the practice should be concerned with all the areas of the activities at a pharmacy. The pharmacist in charge of the training checks the work and description every week and evaluates it using a five-grade system. He / She sends the electronic notebook to the Dean’s Office according to the rules of the place of training.

The student is required to make a 10-15-minute-long presentation for the co-workers of the pharmacy from a professional scientific journal recommended by the pharmacist in charge of the training (the documentation of which will be kept in the workbook) on one occasion. The presentation will take place on a date agreed on by the training location and the student.

At the end of the practice the pharmacist in charge of the training evaluates the student’s overall practical work on an assessment sheet in written form and evaluates the student based on a three-grade system. He / she sends it to the Dean’s Office in a printed and signed form according to the rules of the training place.
CHAPTER 21

After the practice the student fills in a questionnaire pertaining to the training place and the pharmacist in charge of the training according to the rules of the training facility.

Subject: **STATE EXAM PRACTICE II. PHARMACY DISPENSING**  
Year, Semester: 5th year/2nd semester  
Number of teaching hours: Practical: 120

Subject: **STATE EXAM PRACTICE II. PRESCRIPTION PHARMACY**  
Year, Semester: 5th year/2nd semester  
Number of teaching hours: Practical: 120

1st week:  
Lecture: Technical books of pharmacy. (H.Ph. VII., H.Ph.VIII., Eur. Ph. 7., FoNoVII.)

2nd week:  
Lecture: Nomenclature,

3rd week:  
Lecture: reading of prescriptions

4th week:  
Lecture: materials knowledge

5th week:  
Lecture: calculations

6th week:  
Lecture: computer program.

7th week:  
Lecture: Theoretical and practical knowledge of registered drug preparations

8th week:  
Lecture: Basic knowledge of pharmacy management, pharmaceutical affairs organizations and juristic knowledge for pharmacists.

9th week:  
Lecture: Pharmacy organizations.

10th week:  
Lecture: The basic knowledge of medical aid products, equipments and machines for pharmaceutical preparations.

11th week:  
Lecture: the theoretical and practical knowledge of vaccines, immunosera, and sutures for human and veterinary use.

12th week:  
Lecture: Consultation

13th week:  
Lecture: The students need to practice the medium scale pharmaceutical technology operations.

14th week:  
Lecture: Equipments and machines for medium scale pharmaceutical technology operations.

15th week:  
Lecture: Students might learn the process of special pharmaceutical dosage forms for inpatients. (e.g.: infusions, injections, individual compositions).

16th week:  
Lecture: Consultation
Subject: THESIS
Year, Semester: 5th year/2nd semester
Number of teaching hours:

Subject: THESIS CONSULTATION
Year, Semester: 5th year/1st semester
Number of teaching hours:

Subject: VETERINARY HYGIENE
Year, Semester: 5th year/1st semester
Number of teaching hours:
Lecture: 30

1st week:
Lecture: Basics of veterinary hygiene I.

2nd week:
Lecture: Basics of veterinary hygiene II.

3rd week:
Lecture: Basics of veterinary hygiene III.

4th week:
Lecture: Basics of veterinary hygiene IV.

5th week:
Lecture: Formule Normales Veterinariae III

6th week:
Lecture: Preparations from Formule Normales Veterinariae III

9th week:
Lecture: Veterinary illness and therapy I.

10th week:
Lecture: Veterinary illness and therapy II.

11th week:
Lecture: Veterinary illness and therapy III.

12th week:
Lecture: Test

13th week:
Lecture: Zoonisis-animal diseases transmissible to humans

14th week:
Lecture: Zoonisis-animal diseases transmissible to humans II.

15th week:
Lecture: Consultation

Requirements
Students have to attend 30% of the lectures. All materials covered in lectures is an integral part of the subject and therefore included in the self-control test and the final exam.
Requirements for signing the Lecture book: The Department may refuse to sign the lecture book if the student didn’t attend 30% of lectures.
Requirements

Attendance at 50% of lectures is a requirement for acceptance of the semester. Before the end of the semester students have to take a written exam. Requirement on this written exam is at least 60% for the signature of the Lecture Book for the semester and for the student to be allowed to take the End of Semester Exam (ESE). At the end of the semester students take End of Semester Exam (ESE) which is oral. During the semester there is an opportunity to be freed from the constraint of the End of Semester Exam. Students are offered the grade of the written exam passed during the semester if it is at least good (80%) or excellent (90%). Correction of the offered grade is in the form of taking the oral End of Semester Exam instead. The result of the exam can be better or even worse than the offered grade.

Department of Physical Chemistry

Subject: **POLYMORPHISM OF PHARMACEUTICALS**
Year, Semester: 4th year/2nd semester
Number of teaching hours:
Lecture: **30**

- **1st week:**

- **2nd week:**

- **3rd week:**

- **4th week:**

- **5th week:**
  Lecture: Computational chemistry. Polymorph prediction.

- **6th week:**

- **7th week:**

- **8th week:**
  Lecture: Ab initio structure determination from powder diffraction data. Indexing, - Rietveld refinement.

- **9th week:**
  Lecture: Solid state NMR basics. ssNMR in polymorph research.

- **10th week:**
  Lecture: FT-IR and Raman spectroscopy and
microscopy, ATR techniques.

11th week:
**Lecture:** Polymorphism - quality control issues

12th week:
**Lecture:** Polymorphism of dyes and explosives.

13th week:
**Lecture:** Crystallographic databases. CSD, polymorph structures in the Database.

14th week:
**Lecture:** Regulatory questions of polymorphism. FDA, ICH, EMEA rules, Q6A.

15th week:
**Lecture:** Conclusion. Case studies. Polymorphism of chocolate.

---

**Requirements**

Entrance conditions: successful final exam on Pharmaceutical technology II., at least 5 students

---

**Department of Physiology**

Subject: **MODERN TECHNIQUES ALLOWING THE INVESTIGATION OF PHYSIOLOGICAL PHENOMENA**

Year, Semester: 2nd year/2nd semester

Number of teaching hours:

Lecture: 24

1st week:
**Lecture:** The lectures are listed at the web site of the Department of Physiology (http://PHYS.MED.UNIDEB.HU)

---

**Requirements**

1. **Signature of Lecture Book**

Lecture attendance may be followed up by the Department. The lecture will not be delivered if 5 or fewer students show up. Nevertheless, the lecture material is going to be asked in the final assessment.

For continuous updates on all education-related matters, please check the departmental web-site (http://phys.med.unideb.hu)

2. **Evaluation during the semester**

None.

3. **Examination**

At the end of the course a written final assessment will be organized in the form of multiple choice questions. The result of this assessment will determine the verification mark of the credit course using the following conversion table:

<table>
<thead>
<tr>
<th>%</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-39.9</td>
<td>Failed</td>
</tr>
<tr>
<td>40-54.9</td>
<td>Pass</td>
</tr>
</tbody>
</table>
Subject: **PROBLEM BASED LEARNING IN PHYSIOLOGY**  
Year, Semester: 2nd year/2nd semester  
Number of teaching hours:  
Practical: **30**

1st week: 
**Practical:** The practices are listed at the web site of the Department of Physiology (http://PHYS.MED.UNIDEB.HU)

Requirements

1. **Signature of the Lecture Book**  
This is an individual project oriented program. The signature of the lecture book may be refused if the project report is not submitted before to the deadline.

2. **Evaluation during the semester (mid-semester tests)**  
No mid-semester evaluation.

3. **Examination**  
The evaluation is based on the project report submitted before the deadline. For specifics, see the rules below and consult with the departmental website (http://phys.med.unideb.hu).

Aims of the course:  
The program offers carefully selected and designed problems from the field of Physiology. Students can learn how to apply problem solving approach, self-conducted strategy and analytic thinking in resolving selected problems. Skill in team-work is helpful in the program.

**RULES FOR THE PROBLEM BASED LEARNING (PBL) CREDIT COURSE**

1. The program is conducted between 3rd and 11th academic weeks of the second semester.

2. Students must have a tutor, this is the prerequisite for the program. Tutor can be any professor of the Department, not only her/his seminar/practical instructor. The applicant should contact the chosen professor and request him/her to undertake the tutorship. Professors of the Department maintain the right to accept or refuse to be the tutor of the applicant.

3. Special Rule: the applicant has to organize the chosen project and register at the tutor (NOT via 288
EXCEPT FOR THE VALIDATED COURSE 
UNILIFE 
APPLICATIONS 
NEPTUN) until the end of second academic week. Applications after the second week are not accepted.

4. Preconditions for the program: mark three (3) or better in Physiology I, successful closing lab and permission of the Department (arranged by the tutor).

5. The maximum number of participants in the program cannot exceed 100 students. In case, the number of applicants is higher than 100, the seminar/practical instructor or the course coordinator can refuse applicants with mark three or better. The name of the students registered to the program is published on the website of Department of Physiology on the 3rd academic week.

6. Two students works in team on one project, and prepare one mutual report, thus they get the same score at the end of the program regardless their contribution. The Journal Club and Lab Visit programs are carried out individually.

7. Evaluation of the students is based on the written report or the oral presentation using five grade score system (1-5). Grades are final, no make-up is allowed.

8. The list of offered programs are available at the practical lab of the Department or on the Department’s homepage (http://PHYS.MED.UNIDEBH.HU/files/oktatas/kredit/PMO/PBL_topics.pdf).

9. The deadline for the program is the end of the 11th academic week. Reports should be submitted to the tutor. Missing the deadline automatically results grade 1 (fail).

10. Detailed information for the program can be accessed on the website of the Department (http://PHYS.MED.UNIDEBH.HU).

Subject: THE REGULATORY ROLE OF THE CELL MEMBRANE IN PHYSIOLOGICAL AND PATHOLOGICAL CONDITIONS
Year, Semester: 2nd year/2nd semester
Number of teaching hours:
Lecture: 20

1st week: (http://PHYS.MED.UNIDEBH.HU)
Lecture: The lectures are listed at the website of the Department of Physiology

Requirements
1. Signature of Lecture Book
Lecture attendance may be followed up by the Department. The lecture will not be delivered if 5 or fewer students show up. Nevertheless, the lecture material is going to be asked in the final assessment.
For continuous updates on all education-related matters, please check the departmental website (http://PHYS.MED.UNIDEBH.HU)
2. Evaluation during the semester
None.

3. Examination
At the end of the course a written final assessment will be organized in the form of multiple choice questions. The result of this assessment will determine the verification mark of the credit course using the following conversion table:

<table>
<thead>
<tr>
<th>Percentage</th>
<th>Mark</th>
</tr>
</thead>
<tbody>
<tr>
<td>0-39.9 %</td>
<td>Failed</td>
</tr>
<tr>
<td>40-54.9 %</td>
<td>Pass</td>
</tr>
<tr>
<td>55-69.9 %</td>
<td>Satisfactory</td>
</tr>
<tr>
<td>70-84.9 %</td>
<td>Good</td>
</tr>
<tr>
<td>85-100 %</td>
<td>Excellent</td>
</tr>
</tbody>

Division of Operative Techniques and Surgical Research

Subject: **BASIC KNOWLEDGE OF SURGICAL BIOMATERIALS FOR STUDENTS OF PHARMACY**

Year, Semester: 4th year/2nd semester

Number of teaching hours:
- Lecture: 8
- Seminar: 16
- Practical: 8

1st week:
**Lecture:** General and surgical deontology. Surgical armamentarium
**Seminar:** Cutting, hemostatic, grasping-retracting, special and suturing instruments. Order of the instrumental trays and tables. Handling and sterilization of the instruments.

2nd week:
**Lecture:** Wound closure and the required surgical biomaterials.
**Seminar:** Classification, package, application fields, storage, sterilization and quality control of suture materials.
**Practical:** Surgical needles, suture materials, knotting and suturing techniques.

3rd week:
**Lecture:** Operating room environment, order of the operating work. Scrubbing and the required materials. Preparations for the operation, isolation of the operative field.
**Seminar:** Instrumental order on the operative tables. Disinfection and isolation of the operative field.
**Practical:** Scrubbing. Wound closure with different suturing techniques on surgical training models.

4th week:
**Lecture:** Hemostasis. Methods and the required materials. Injection techniques and blood sampling. Punction, preparation and cannulation of vessels.
**Seminar:** Basics of hemorheology.
**Practical:** Ligation of vessels on gauze models. Vein preparation/cannulation, injection techniques (i.m., i.v.) and taking blood samples on phantom models.

5th week:
**Seminar:** Different types of infusion accessories. Demonstration of the infusion pump. Preparing mixture infusion, calorie calculation.
**Practical:** Preparing the infusion set and
connecting it to the venous catheter. Different types and use of blood pressure gauge.

6th week:

7th week:
Seminar: Application of tissue adhesives and bioplasts. Conicotomy and tracheostomy. Reconstruction of blood vessel and the required biomaterials (video demonstration).

8th week:
Seminar: Requirements of ISO, GLP. Preclinical experiments in pharmacology. Technique of dissection of isolated organs (heart, vessel, muscle, bowel preparates). In vivo techniques and models. Extermination, autopsy and taking samples of experimental animals.

Self Control Test

Requirements

Prerequisite:
Pharmaceutical technology theory I, Human physiology II

Aim of the subject:
The main aim is to acquire up-to-date theoretical and practical knowledge that is appropriate to the modern age and the students can get acquainted with the basic methods, that can help the pharmacy students to be familiar with the basic surgical interventions and the required materials during their future work. The students have to learn the characteristics and the means of application of the biomaterials (suturing materials, bioplasts, tissue adhesives, catheters, drains, stoma bags, urine condoms, incontinence pads) that can be used during the surgical practice. They should have the knowledge of the manual interventions that they may need during pharmacological experimental work. A further aim is to improve manual skills. They have to possess the basic knowledge and skills for catastrophe, in order to be capable to help in manual (operative) - often life-saving - activity. They should have the basic knowledge to be able to inform patients, which is part of the work done by the dynamic team of a doctor and pharmacist.

Requirements:
The practices are based on the lectures, so the students can hardly meet the requirements at the practices without theoretical knowledge. The lectures and seminars/practices are strictly built on each other, so it is difficult to make up missed classes. Compensation for missed seminars/practices should be according to the Rules and Regulations of the University of Debrecen. If the student is absent from more than 20% of all teaching hours (6 out of 32) without any acceptable reason, the Department may refuse to sign the Lecture Book. Besides the suggested reading materials the hand-outs are also part of the curriculum. Performance is assessed on the five-grade scale (AW5) and it is
based on the work through the semester and completion of the final written test at the end of the course.

Faculty of Pharmacy

Subject: **INTRODUCTION TO SCIENTIFIC RESEARCH**

CHAPTER 22
TITLES OF THESES

Department of Anatomy, Histology and Embryology

1. Title: Expression of extracellular matrix molecules in the olfactory system of the rat
Tutor: Klára Matesz M.D., Ph.D., D.Sc.

2. Title: The role of the extracellular matrix in the regeneration of the nervous system.
Tutor: Klára Matesz M.D., Ph.D., D.Sc.

3. Title: Possible applications of morphofunctional matrices for classification of neurons (computer modelling)
Tutor: Ervin Wolf M.Sc., Ph.D.

4. Title: Investigation of contour integration processing in the primary visual cortex using voltage sensitive dye imaging

5. Title: Three-dimensional reconstruction of thalamocortical axons in the primary somatosensory cortex of rats

6. Title: Investigation of signalling mechanisms that regulate cartilage development and maturation
Tutor: Róza Zákány M.D., Ph.D.

7. Title: Interrogation of spinal dorsal horn circuits with electrophysiological and optogenetic tools
Tutor: Róza Zákány M.D., Ph.D.

8. Title: Light- and electron microscopy level analysis of the axons and axon collaterals of spinal lamina I projection neurons
Tutor: Péter Szücs M.D., Ph.D.

9. Title: Local synaptic connections of projection neurons in spinal lamina I
Tutor: Péter Szücs M.D., Ph.D.

10. Title: Morphometric analysis of excitatory and inhibitory interneurons in the spinal dorsal horn
Tutor: Péter Szücs M.D., Ph.D.

11. Title: Extracellular matrix in the developing brainstem
Tutor: Ildikó Wéber M.Sc., Ph.D.

12. Title: Extracellular matrix molecules in the motor nuclei of the eye in the mouse
Tutor: Ildikó Wéber M.Sc., Ph.D.

13. Title: Regeneration of the optic nerve in the frog
Tutor: Botond Gaál M.Sc., Ph.D.

14. Title: Regeneration of the vestibular system in the rat
Tutor: Botond Gaál M.Sc., Ph.D.

15. Title: Investigation of neuronal network development in the spinal cord
Tutor: Zoltán Mészár M.Sc., Ph.D.

16. Title: The role of the molecular clock in healthy and osteoarthritic chondrocytes
Tutor: Csaba Matta M.Sc., Ph.D.

17. Title: Role of PACAP signalling in cartilage differentiation and regeneration
Tutor: Tamás Juhász M.Sc., Ph.D.

18. Title: Distribution of the extracellular matrix in the red nucleus and pararubral area
Tutor: Éva Rácz M.Sc., Ph.D.

19. Title: The endocannabinoid-mediated modulation of spinal nociception
Tutor: Zoltán Hegyi M.Sc., Ph.D.

20. Title: The role of astrocytes in spinal pain processing
Tutor: Zoltán Hegyi M.Sc., Ph.D.

21. Title: Quantitative morphological studies of primary afferent-motoneuron connections in the frog's brainstem
Tutor: András Birinyi M.Sc., Ph.D.

22. Title: Role of pro-inflammatory cytokines in neuron-glia interaction during inflammatory pain states
Tutor: Krisztina Holló M.Sc., Ph.D.

23. Title: Mapping of synapses on dendrites of GABAergic neuron subtypes in the cerebral cortex
Tutor: Petra Talapka Ph.D.

Department of Biochemistry and Molecular Biology

1. Title: Involvement of phagocytosis of apoptotic cells in the muscle regeneration

**Department of Biophysics and Cell Biology**

1. Title: Investigation of cell surface distribution of erbB-2 oncoprotein in breast tumor cell lines. 
   Tutor: János Szöllősi M.Sc., Ph.D., D.Sc., M.H.A.Sc.

3. Title: Studying the inactivation of voltage-gated potassium ion channels in heterologous expression systems. 
   Tutor: György Panyi M.D., Ph.D., D.Sc.

4. Title: Epigenetic regulation of nucleosome-DNA cohesion. 
5. Title: Interactions between ABC transporters and their membrane environment. 
   Tutor: Gábor Szabó M.D., Ph.D., D.Sc.

6. Title: Mathematical analysis and computer modelling of the topology of cell surface proteins. 
7. Title: Role of MHC in the organization of cell surface proteins. 
   Tutor: László Mátyus M.D., Ph.D., D.Sc.

8. Title: Examination of the channel function properties of the P170 multidrug pump by patch-clamp. 
   Tutor: Zoltán Krasznai M.Sc., Ph.D.

9. Title: Cytometry of cytotoxic lymphocytes. 
10. Title: Physiological roles of the multidrug resistance transporter P-glycoprotein. 
    Tutor: Zsolt Baesó M.D., Ph.D.

11. Title: Elucidation of the catalytic mechanism of ABC transporters. 
    Tutor: Katalin Goda M.Sc., Ph.D.

12. Title: 3-dimensional reconstruction of chromosome conformations based on whole-genome contact probability data. 
13. Title: Histone point mutations affecting epigenetic modifications: impact on chromosome architecture. 
    Tutor: Lóránt Székvölgyi M.Sc., Ph.D.

    Tutor: Andrea Dóczy-Bodnár M.Sc., Ph.D.

15. Title: Studying nuclear receptor function by modern microscopy techniques. 
    Tutor: György Vámosi M.Sc., Ph.D.

16. Title: Quantitative investigation of the associations of ErbB proteins using biophysical and molecular biological methods.

17. Title: The correlation between the metastatic potential and chemoresistance of breast tumors with the expression level and association state of ErbB proteins. 
   Tutor: Péter Nagy M.D., Ph.D.

18. Title: Molecular mechanisms of anticancer immune therapy.

19. Title: Role of molecular interactions between receptor tyrosine kinases and integrins in the therapy resistance of tumors. 
    Tutor: György Vereb M.D., Ph.D., D.Sc.

20. Title: Comparative study on Kv1.3 channels conjugated with fluorescent proteins. 
    Tutor: Péter Hajdu M.Sc., Ph.D.

**Department of Anesthesiology and Intensive Care**

1. Title: Experimental testing of the neuromuscular junction. 
   Tutor: Ákos Fábián M.D., Ph.D.

2. Title: Preemptive and preventive analgesia. 
   Tutor: Béla Fülesdi M.D., Ph.D., D.Sc.

3. Title: Tako-tsubo cardiomyopathy in neurocritical care conditions. 
   Tutor: Csilla Molnár M.D., Ph.D.

4. Title: Clinical studies in the field of neuromuscular block and its reversal. 
   Tutor: Adrienn Pongrácz M.D., Ph.D.
Institute of Behavioural Sciences, Faculty of Public Health
1. Title: Basic issues of psy-complex (psychology, psychotherapy, psychiatry)
2. Title: Changing attitudes towards human phenomena in Western medicine
3. Title: Contemporary problems of Psy-complex
4. Title: Health and disease in cultural context
5. Title: Medicalization and its social context
6. Title: Prolongation of life as a modern Western project
7. Title: Sandor Ferenczi: Clinical Diary and the philosophy of doctor-patient relationship
8. Title: The importance of the point of view of psychoanalysis for a humanistic medicine. Tutor: Attila Bánfalvi M.A., Ph.D., C.Sc.
9. Title: "Becoming a doctor": the process of socialisation Tutor: Péter Molnár M.D., D.Sc.
10. Title: Ethical and legal issues of genetic research
11. Title: Ethical issues of research in the medical and health sciences
12. Title: Professional ethics and the system of gratitude money in Hungary
13. Title: The ethics of end-of-life decisions Tutor: Péter Kakuk M.A., Ph.D.
14. Title: End of life decisions Tutor: Sándor Kómüves M.A., Ph.D.
15. Title: Evolutionary Psychopathology
16. Title: Humor and Mental Health
17. Title: Life History Strategy elements in mate choice, attachment, and mental health Tutor: Roland Tisljár M.A., Ph.D.
18. Title: Psychological interventions in dental practice Tutor: Eszter Tisljár - Szabó M.A., Ph.D.

Department of Inorganic and Analytical Chemistry
Department of Preventive Medicine, Faculty of Public Health
1. Title: Health-related behaviours among adolescents
2. Title: Mental health of health care workers
3. Title: Mental health of students
4. Title: Social support among university students
Tutor: Éva Bíró M.D., Ph.D.

5. Title: The use of Molecular genetic techniques for the detection of genome alterations in malignant diseases (review the literature)

6. Title: Mortality due to environmental risk factors in European countries
Tutor: Sándor Szűcs M.Sc., Ph.D.

7. Title: Genomic and environmental determinants of cardiovascular diseases (genetic epidemiology analyses)
Tutor: Szilvia Fiaital M.D., Ph.D.

8. Title: Assessment of air quality status in developing and developed countries
Tutor: Ervin Árnyas M.Sc., Ph.D.

9. Title: Monitoring type 2 diabetes design strategies
10. Title: Prevalence of type 2 diabetes (specific region)
Tutor: Attila Csaba Nagy M.D., Ph.D.

11. Title: Evaluation of chronic care for adult overweighted in general medical practice
12. Title: Evaluation of chronic care for adult smokers in general medical practice
13. Title: Evaluation of chronic care for diabetes mellitus in general medical practice
14. Title: Evaluation of chronic care for hypertension in general medical practice
15. Title: Evaluation of foreign aid for the health sector in medium and low income countries
Tutor: János Sándor M.D., Ph.D.

16. Title: Genetic epidemiology of obesity (literature review)

17. Title: The role of the FTO gene in the development of metabolic syndrome
Tutor: Károly Nagy Ph.D.

18. Title: Pesticide use in developed and developing countries
Tutor: László Pál Ph.D.

19. Title: Genotoxic exposures in the work- and ambient environment

20. Title: Health impact assessment of policies, programmes and projects

21. Title: Investigation of workplace hazards

22. Title: Occupational diseases
Tutor: Balázs Ádám M.D., M.Sc., Ph.D.

Division of Cardiology
1. Title: Ablation in atrial fibrillation
2. Title: Novel treatment modalities in atrial fibrillation (catheter ablation, surgery and pacemakers)
Tutor: Zoltán Csanádi M.D., Ph.D.

3. Title: Flow calculation in 3D reconstructed coronary arteries
Tutor: Zsolt Kőszegi M.D., Ph.D.

4. Title: Cardiovascular aspects of diabetes mellitus
5. Title: Left ventricular function of obese patients.
Tutor: Tibor Fülöp M.D., Ph.D.

6. Title: Supraventricular arrhythmias.
Tutor: Csaba Kun M.D.

7. Title: The role of echocardiography in staving off complication of myocardial infarction.
Tutor: Ildikó Farkas-Rácz M.Sc.

8. Title: Thrombus aspiration in AMI
Tutor: László Balogh M.D.

9. Title: Aspirin - resistency
Tutor: Nóra Homoródi M.D.

10. Title: Cardiovascular complications of dermatomyositis.
Tutor: Andrea Péter M.D.
11. Title: Invasive hemodynamic measurements in heart failure patients
Tutor: László Fülöp M.D., Ph.D.

**Department of Botany**
1. Title: Stress tolerance and resistance mechanisms of higher plants

2. Title: The study of chromatin and microtubule organization in cells of higher plants
   Tutor: Csaba Máthé M.Sc., Ph.D.

3. Title: Plant bioactive compounds
   Tutor: Gábor Vasas M.Sc., Ph.D.

4. Title: Role of glycoproteins in infection and immunology (bibliographic)
   Tutor: János Kerékgyártó M.Sc., Ph.D., C.Sc.

**Division of Clinical Physiology**
1. Title: Improvement of myocardial inotropy under physiological and pathological conditions
   Tutor: Zoltán Papp M.D., Ph.D., D.Sc.

2. Title: The role of angiotensin II in cardiovascular diseases
3. Title: Vascular alterations leading to hypertension.

4. Title: Endogenous regulation of the renin-angiotensin-aldosterone system and its clinical significance
   Tutor: Miklós Fagyas M.D., Ph.D.

**Division of Nuclear Medicine and Translational Imaging**
1. Title: Development of E-learning material for nuclear medicine
   Tutor: József Varga M.Sc., Ph.D.

2. Title: Assessment of Diabetic Foot with Different Nuclear Medicine procedures
   Tutor: Ildikó Garai M.D., Ph.D.

**Department of Medical Imaging**
1. Title: Posttherapeutic I-131 whole body SPECT/CT in patients with thyroid cancer
2. Title: The role of Tc99m-Tektrotyld SPECT/CT to evaluate metastatic neuroendocrine tumors
   Tutor: Ildikó Garai M.D., Ph.D.

3. Title: Localisation of anatomical regions of CT scans with machine learning methods
   Tutor: Zoltán Barta M.D.

**Department of Human Genetics**
1. Title: Characterization of factor-C protein family using sequence databases.
2. Title: Expression of WT1 and its splice variants in different diseases studied by real time PCR.
3. Title: Study of a gene regulating differentiation in bacteria.
4. Title: Study of the WT1 gene in urogenital malformations.

5. Title: Human disease models in animals and lower eukaryotes (review).
   Tutor: Zsigmond Fehér M.D., Ph.D.

6. Title: Ca++-binding proteins in Streptomyces
7. Title: Isolation of mono-ADP-ribosylated proteins from pro- and eukaryotic cells.
   Tutor: András Penyige M.Sc., Ph.D.

8. Title: Analysis of an A factor non-producer bald mutant Streptomyces griseus strain with respect of antibiotic production and cell differentiation.
   Tutor: Zsuzsanna Birkó M.Sc., Ph.D.

9. Title: Chromosome-tracking studies in complex diseases.
   Tutor: György Vargha M.D., Ph.D.

10. Title: Factor-C: a protein regulating differentiation in Streptomyces.
    Tutor: Judit Keserű M.Sc., Ph.D.
11. Title: Copy number variation of WT-1 gene in hematological conditions
   Tutor: Gergely Buglyó M.D., Ph.D.

12. Title: Functional analysis of the Streptomyces facC gene in Aspergillus
   Tutor: Melinda Paholcsek M.Sc., Ph.D.

13. Title: Global analysis of the human blood plasma epitome and interactome in health and disease.

14. Title: Use of comparative monoclonal antibody proteomics to detect three dimensional conservation relevant to protein function.
   Tutor: László Takács M.D., Ph.D., D.Sc., M.H.A.Sc.

15. Title: Study of antibiotic production and differentiation in Streptomyces bacteria.
16. Title: Study the role of miRNAs in oncogenic disorders.
   Tutor: Melinda Szilágyi-Bónizs M.Sc., Ph.D.

**Department of Clinical Oncology**
1. Title: Relationship between exercise and development of malignant tumors
2. Title: Role of microRNAs in development of breast cancer
3. Title: Role of optimalisation of body weight in treatment and prevention of malignant tumors
   Tutor: Zsolt Horváth M.D., Ph.D.
4. Title: Treatment options of metastatic castration-resistant prostate cancer
   Tutor: Balázs Juhász M.D.
5. Title: Re-purposing of clinical drugs for cancer prevention
   Tutor: Iván Uray M.D., Ph.D.

**Department of Immunology**
1. Title: Phenotypic and functional properties of dendritic cells
2. Title: Functional properties of SLAM receptor family proteins in dendritic cells

**Division of Clinical Oncology**
1. Title: Current treatment of metastatic kidney cancer based on clinical evidences
   Tutor: Balázs Juhász M.D.
2. Title: Palliation in oncology
   Tutor: Éva Szekanecz M.D., Ph.D.
3. Title: Diagnosis and treatment of cancer of unknown primary tumors
4. Title: The role of clinical trials in the current era of clinical oncology
   Tutor: Judit Kocsis M.D., Ph.D.

**Department of Laboratory Medicine**
1. Title: Evaluation of known and novel autoantibodies in the diagnostics of autoimmune and immune-mediated disorders
2. Title: Identification of novel biomarkers for the detection and prediction of cirrhosis associated infections
   Tutor: Péter Antal-Szalmás M.D., Ph.D.
CHAPTER 22

3. Title: Vitamin D status in colorectal carcinoma
Tutor: Harjit Pal Bhattoa M.D., Ph.D.

4. Title: Cytogenetic aberrations in infertility
5. Title: Genetic examinations in t(12;21)
   positive childhood acute lymphoblastic leukemia
Tutor: Anikó Ujfalusi M.D., Ph.D.

6. Title: Analysis of serum human epididymis protein 4 (HE4) in the follow-up of cystic fibrosis patients
7. Title: Investigation of platelet microRNA expressions in septic conditions
Tutor: Béla Nagy Jr. M.D., Ph.D.

8. Title: Genetic predisposition in autoimmune diseases
9. Title: Investigations of miRNAs in autoimmune diseases
Tutor: Érika Zilahi M.Sc., Ph.D.

Division of Clinical Laboratory Science
1. Title: Effect of alfa2-plasmin inhibitor polymorphisms on the risk of thrombosis
2. Title: Effect of FXIII on smooth muscle cell functions
3. Title: Investigation of alfa2-plasmin inhibitor and fibrinogen interaction
4. Title: Method development for the detection of various alpha2 plasmin inhibitor isoforms
Tutor: Éva Katona Dr. habil., M.Sc., Ph.D.

5. Title: Inherited hemostasis disorders; laboratory and molecular genetic aspects
6. Title: Laboratory monitoring of the new generation oral anticoagulants
7. Title: New diagnostic methods in Protein S deficiency.
   Tutor: Zsuzsanna Bereczky M.D., Dr. habil., Ph.D.

8. Title: Characterization of the heparin-antithrombin interaction with surface plasmon resonance
Tutor: Krisztina Pénzes-Daku M.Sc., Ph.D.

9. Title: Hybrid quantum mechanics - molecular mechanics (QM/MM) calculations on biological systems
Tutor: István Komáromi M.Sc., Ph.D.

10. Title: Fibrinolytic marker levels and polymorphisms in ischemic stroke patients
11. Title: Local hemostasis alterations in the left atrium of patients with atrial fibrillation
Tutor: Zsuzsa Bagoly M.D., Ph.D.

Division of Radiotherapy
1. Title: Dealing with irradiation induced side effects
2. Title: Neoadjuvant radio-chemotherapy of rectal cancer
3. Title: Palliative and supportive care in radiooncology
4. Title: Partial irradiation of the breast
5. Title: Radiotherapy of breast cancer
Tutor: Andrea Furka M.D., Ph.D.

Department of Dermatology
1. Title: Ablative laser treatment in Hailey-Hailey disease
2. Title: DNA repair mechanisms
3. Title: Genetic susceptibility in psoriasis
4. Title: Indications in ablative Er:YAG laser
5. Title: Methods of sunprotection
Tutor: Éva Remenyik M.D., Ph.D., D.Sc.

6. Title: Importance of sentinel node dissection in the complex therapy of melanoma
7. Title: Modern moist wound dressings with simultaneous effective antibacterial properties in the treatment of difficult to heal wounds
8. Title: Options for treatment of basal cell cancer including targeted therapy
9. Title: Possibilities of biotechnological skin substitution in the treatment of burns
10. Title: Possibilities of cell therapy in the treatment of burns
11. Title: Possibilities of scar correction
12. Title: Role of Negative Pressure Therapy in burn treatment
Tutor: István Juhász M.D., Ph.D., C.Sc.
13. Title: Deformities and discolorations of the nails: relation to other medical conditions. Overview of the literature and case reports. Tutor: Éva Szabó M.D., Ph.D.

14. Title: Significance of compression therapy in treating venous leg ulcer. Tutor: Zoltán Péter M.D.

15. Title: New approaches in the classification and therapy of chronic urticaria. Tutor: Krisztián Gáspar M.D., Ph.D.

16. Title: Possibility of allergen specific immunotherapy in the treatment of atopic dermatitis. Tutor: Krisztián Gáspar M.D., Ph.D.

17. Title: Lipid disorder associated dermatological symptoms. Tutor: Dániel Töröcsik M.D., Ph.D.

18. Title: Role of lipid environment in the activation of dermal macrophages. Tutor: Dániel Töröcsik M.D., Ph.D.

20. Title: Opalizumab therapy in chronic urticaria. Tutor: Andrea Szegedi M.D., Ph.D., D.Sc.

Department of Medical Chemistry

3. Title: Regulation of macrophage activation. Tutor: László Virág M.D., Ph.D., D.Sc.

5. Title: Structural and functional investigation of a fungus specific protein phosphatase. Tutor: Ilona Farkas M.Sc., Ph.D.

6. Title: Study of metabolic processes with special regard to the involvement of mitochondrial activity. Tutor: Péter Bay M.Sc., Ph.D.

7. Title: Development of High-Content Screening Applications. Tutor: Endre Kókai M.Sc., Ph.D.

8. Title: Signalling pathways in endome. Tutor: Beáta Lontay M.Sc., Ph.D.

9. Title: Study of the role of protein phosphatase in wound healing. Tutor: Tibor Docsa M.Sc., Ph.D.

10. Title: Inhibition of sodium-glucose cotransporter of kidney by glucose-based compounds also interfering with glycogenolysis. Tutor: Tibor Docsa M.Sc., Ph.D.

11. Title: Regulation of protein phosphatase-1 by inhibitory proteins and the translocation of the targeting subunit. Tutor: Andrea Kiss M.Sc., Ph.D.

12. Title: High-Throughput Screening. Tutor: Csaba Hegedüs M.D., L.D.S., Ph.D.

Department of Medical Microbiology

1. Title: Antimicrobial cell-mediated immunity measured by mRNA tests. Tutor: József Kónya M.D., Ph.D., D.Sc.

2. Title: Evaluation of in vitro efficacy of different new antibiotics against multiresistant bacteria. Tutor: Judit Szabó M.D., Ph.D.

3. Title: Role of HPV in head and neck cancers. Tutor: Krisztina Szarka M.Sc., Ph.D.

4. Title: Evaluation of fungicidal effect of antifungal agents using time-kill curves. Tutor: László Majoros M.D., Ph.D.
6. Title: Prevalance of human polyomaviruses  
   Tutor: Eszter Csoma M.Sc., Ph.D.

7. Title: Effects of human papillomavirus oncogenes on cellular signaling pathways in keratinocytes  
   Tutor: Anita Szalmás M.Sc., Ph.D.

8. Title: Molecular epidemiology of aminoglycoside resistance in nosocomial Gram negative bacteria  
   Tutor: Gábor Kardos M.D., Ph.D.

9. Title: Intratypical variation of human papillomaviruses  
   Tutor: György Veress M.Sc., Ph.D.

10. Title: The importance of fungal quorum-sensing in antifungal therapy against Candida biofilms.  
    Tutor: Renátó Kovács M.Sc., Ph.D.

**Department of Internal Medicine**

1. Title: Immunotherapy of B cell lymphomas.
2. Title: Safety profile of prolonged rituximab therapy in lymphomas.
3. Title: Targeted therapy in non-Hodgkin's lymphomas  
   Tutor: Lajos Gergely M.D., Ph.D. habil.

4. Title: Clinical testing of sinus node function.  
   Tutor: Péter Kovács M.D., DLA, Ph.D., D.Sc.

5. Title: Lipid abnormalities in hypothyroidism.  
6. Title: The function of LDL in lipid metabolism  
   Tutor: György Paragh M.D., Ph.D., D.Sc.

7. Title: Diagnostic tests and imaging techniques in endocrinology.  
   Tutor: Endre Nagy M.D., Ph.D., D.Sc.

8. Title: Antiarrhythmic drug treatment.  
9. Title: Cardiac arrhythmias in patients end-stage renal failure.  
10. Title: Pacemaker treatment and myocardial infarction.  
11. Title: Pathophysiology of neurocardiogenic syncope.

12. Title: Rhythm disturbances and the autonomic system of the heart.

13. Title: Ventricular repolarization and drugs.  
    Tutor: István Lőrincz M.D., Ph.D.

    Tutor: Judit Boda M.D.

15. Title: Adipokines and Insulin Resistance
16. Title: Obesity: Diagnosis and Treatment
17. Title: Obesity: Etiology and Co-morbidities
   Tutor: Péter Fülöp M.D., Ph.D.

18. Title: Characteristics of rare systemic vasculitides
19. Title: Sjögren's syndrome associated with other autoimmune disease  
   Tutor: Margit Zeher M.D., Ph.D., D.Sc.

20. Title: Immunoregulatory abnormality in undifferentiated connective tissue disease
21. Title: Interstitial lung diseases in MCTD.
22. Title: The presence of antiphospholipide antibodies in the disease course of the MCTD
23. Title: Vascular involvement in mixed connective tissue disease.
24. Title: Vascular risk factors in undifferentiated connective tissue disease  
   Tutor: Edit Bodolay M.D., Ph.D., D.Sc.

25. Title: Dermato/polymyositis overlap with antiphospholipide syndrome.
26. Title: Genetical study in myositis
27. Title: Improvement of quality of life in polymyositis and dermatomyositis patients by physiotherapy  
   Tutor: Katalin Dankó M.D., Ph.D., D.Sc.

28. Title: Plasmapheresis treatment in intensive therapy  
   Tutor: Pál Soltész M.D., Ph.D., D.Sc.

29. Title: Autoimmune disorders and GI tract  
    Tutor: Zsolt Barta M.D., Ph.D.

30. Title: Ischemic colitis.
31. Title: Life quality of Raynaud syndrome  
    Tutor: Zoltán Csiki M.D., Ph.D.
32. Title: The disease course after stent implantation in peripheral arterial disease
   Tutor: György Kerekes M.D., Ph.D.

33. Title: Novel therapeutical approaches in multiple myeloma
34. Title: The impact of multi-drug resistance genes in the prognosis of lymphoproliferative disorders
   Tutor: László Váróczy M.D., Ph.D., habil.

35. Title: Inherited and acquired thrombophilia
36. Title: New direct oral anticoagulants
37. Title: Stem cell therapy in peripheral arterial disorders
   Tutor: Zoltán Boda M.D., Ph.D., D.Sc.

38. Title: Gastric cancer: clinics and treatment
39. Title: Gastrointestinal bleeding
40. Title: Gluten sensitive enteropathy
41. Title: Inflammatory bowel diseases.
42. Title: Lymphomas in the gastrointestinal tract.
   Tutor: István Altorjay M.D., Ph.D., D.Sc.

43. Title: Langerhans histiocytosis
44. Title: Osteosclerotic myeloma
45. Title: Therapeutic challenges in rare haemostatic disorders
   Tutor: György Pfiegl er M.D., Ph.D.

46. Title: Epidemiology, diagnostics and therapy of chronic hepatitis C
47. Title: Pathomechanism of alcoholic hepatitis
48. Title: Signs, diagnostics and treatment of portal hypertension.
49. Title: Therapeutic options in primary sclerotic cholangitis
50. Title: Treatment of autoimmune hepatitis
   Tutor: István Tornai M.D., Ph.D. habil.

51. Title: A case history of an interesting acute myeloid leukaemia patient in the 2nd Department of Medicine (connection with the literature data)
   Tutor: Attila Kiss M.Sc., Ph.D.

52. Title: Chronic neutrophilic leukaemia
   Tutor: Béla Telek M.D., Ph.D.

53. Title: Biological treatment of ulcerative colitis
54. Title: Extraintestinal association in IBD
   Tutor: Károly Palatka M.D., Ph.D. habil.

55. Title: The role of Willebrand factor in various internal diseases.
   Tutor: Ágota Schlammadinger M.D., Ph.D.

56. Title: Bacterial infection in liver cirrhosis
57. Title: Clinical significance of chronic pancreatitis
58. Title: Current therapeutic options of acute pancreatitis
   Tutor: Zsuzsa Vitális M.D., Ph.D.

59. Title: Diagnosis and treatment of chronic lymphocytic leukemia
60. Title: Novel therapeutic approaches in the treatment of multiple myeloma
61. Title: Philadelphia negative chronic myeloproliferative neoplasms - novel genetic and therapeutic improvements
62. Title: Recent advances in the management of chronic ITP
   Tutor: Péter Batár M.D., Ph.D.

63. Title: Are the bacterial infections predictable in liver cirrhosis?
64. Title: Role of serological markers in prediction of disease course and response to therapy in inflammatory bowel diseases.
   Tutor: Mária Papp M.D., M.Sc., Ph.D. habil.

65. Title: Gastoesophageal reflux disease
   Tutor: László Dávida M.D.

**Department of Pathology**

1. Title: Molecular classification of glial neoplasms
2. Title: Overview of non-adenohypophysaer neoplastic lesion within and around the sella
3. Title: Use of IDH-1 immunohistochemistry in surgical neuropathology
   Tutor: Péter Molnár M.D., D.Sc.

4. Title: Functional analysis of malignant lymphomas using image analysis
5. Title: Mitotic failures and cancer progression
6. Title: Molecular diagnostics of solid tumors
   Tutor: Gábor Méhes M.D., D.Sc.

7. Title: Clinicopathological studies in haemorrhagic stroke
8. Title: Clinicopathological studies in ischaemic stroke
9. Title: Dementia with Lewy bodies (DLB) and Parkinson’s disease dementia (PDD)—differences and similarities
10. Title: Molecular pathology of glial brain tumours
11. Title: Pathomechanisms of cell death in neurodegenerative diseases
   Tutor: Tibor Hortobágyi M.D., Ph.D.

Department of Pharmacology and Pharmacotherapy
1. Title: Cardiovascular risk factors
2. Title: Metabolic link between obesity and insulin resistance
   Tutor: Zoltán Szilvássy M.D., Ph.D., D.Sc.

3. Title: Arrhythmic patient in dentistry
4. Title: Optional title in pharmacology
5. Title: Pharmacological and clinical significance of adenosine receptor antagonists
6. Title: Pharmacological and non-pharmacological treatment of endothelial dysfunction
7. Title: Pharmacology of antidepressive drugs: dental implications
   Tutor: József Szentmiklósi M.D., Ph.D.

8. Title: Emerging roles of prostaglandin DP1 and DP2 receptors in acute and chronic aspects of allergic diseases
9. Title: Optional title in pharmacology
10. Title: Pharmacological treatment of acute decompensated heart failure (ADHF)
11. Title: Pharmacology of herbal remedies
12. Title: Pharmacology of neurogenic inflammation
13. Title: Pharmacotherapy of Amyotrophic Lateral Sclerosis (ALS)
14. Title: Pharmacotherapy of Duchenne Muscular Dystrophy (DMD)
15. Title: Possible pharmacological exploitations of TRPV1 receptors

16. Title: Use of Histone deacetylase inhibitors (HD1): Novel advances in cancer treatment
   Tutor: Róbert Pórszász M.D., Dr. habil., MBA, Ph.D.

17. Title: Effect of colony stimulating factors or other drugs on bone marrow-derived cell lines
18. Title: How insulin resistance influences drug effects
19. Title: Selected topic in field experimental hematono-ology
   Tutor: Ilona Benkő M.D., Ph.D.

20. Title: Optional title on cancer chemotherapy
   Tutor: Attila Megyeri M.D., Ph.D.

21. Title: Optional title in pharmacology
   Tutor: Ágnes Cseppentő M.D.

22. Title: Optional title on antibacterial chemotherapy
   Tutor: Zsuzsanna Gál M.Sc., Ph.D.

23. Title: Optional title in pharmacology
   Tutor: Béla Juhász D.Pharm., Dr. habil., Ph.D.

24. Title: Optional title in pharmacology
   Tutor: Balázs Varga D.Pharm., Ph.D.

25. Title: Optional title in pharmacology
   Tutor: Mariann Bombicz D.Pharm.

26. Title: Optional title in pharmacology
   Tutor: Dániel Priksz D.Pharm.

Department of Physiology
1. Title: Expression and significance of the TASK channels in physiological and pathological conditions
   Tutor: Péter Szücs M.D., Ph.D.

2. Title: Alterations of intracellular calcium concentration in pathological conditions
   Tutor: László Csernoch M.Sc., Ph.D., D.Sc.

3. Title: Regional differences in the electrophysiological properties of cardiomyocytes
   Tutor: Péter Nánási M.D., Ph.D., D.Sc.
4. Title: Role of afterdepolarization mechanisms in the arrhythmogenesis  
   Tutor: Tamás Bányász M.D., Ph.D.  
5. Title: Electrophysiological properties of mammalian cardiac tissues  
   Tutor: János Magyar M.D., Ph.D., D.Sc.  
6. Title: Beat-to beat variability of cardiac repolarization  
   Tutor: Norbert Szentandrássy M.D., Ph.D.  
7. Title: Studies on ion channels incorporated into artificial membranes  
8. Title: Role of late sodium current in the arrhythmogenesis  
   Tutor: Balázs Horváth M.D., Ph.D.  
9. Title: Role of potassium channels in neuron function  
   Tutor: Balázs Pál M.D., Ph.D.  
10. Title: Properties of vanilloid receptors  
    Tutor: István Balázs Tóth M.Sc., Ph.D.  
11. Title: Role of Protein Kinase C isoforms in cell function.  
    Tutor: Gabriella Czifra M.Sc., Ph.D.  

Division of Gastroenterology  
1. Title: Gastric cancer: clinics and treatment  
2. Title: Gastrointestinal bleeding  
3. Title: Gluten sensitive enteropathy  
4. Title: Inflammatoriy bowel diseases  
5. Title: Lymphomas in the gastrointestinal tract  
   Tutor: István Altorjay M.D., Ph.D., D.Sc.  
6. Title: Epidemiology, diagnostics and therapy of chronic hepatitis C  
7. Title: Pathomechanism of alcoholic hepatitis  
8. Title: Signs, diagnostics and treatment of portal hypertension  
9. Title: Therapeutic options in primary sclerotizing cholangitis  
10. Title: Treatment of autoimmune hepatitis  
    Tutor: István Tornai M.D., Ph.D. habil.  

Division of Haematology  
1. Title: Immunotherapy of B-cell lymphomas  
2. Title: The role of PET/CT imaging in lymphomas  
   Tutor: Lajos Gergely M.D., Ph.D. habil.  
3. Title: Diagnosis and treatment of chronic lymphocytic leukemia  
4. Title: Novel therapeutic approaches in the treatment of multiple myeloma  
5. Title: Philadelphia negative myeloproliferative neoplasms - novel genetic and therapeutic improvements  
6. Title: Recent advances in the management of chronic ITP  
   Tutor: Péter Batár M.D., Ph.D.  

Division of Rare Diseases  
1. Title: Langerhans histiocytosis  
2. Title: Osteosclerotic myeloma  
3. Title: Therapeutic challenges in rare haemostatic disorders  
   Tutor: György Pfliegler M.D., Ph.D.  

Division of Rheumatology  
1. Title: Cardiopulmonary manifestation in systemic sclerosis  
2. Title: Pulmonary arterial hypertension in systemic sclerosis.  
   Tutor: Gabriella Szűcs M.D., Ph.D.
CHAPTER 22

3. Title: Rheumatology 2017 - modern diagnostics and therapy.
   Tutor: Zoltán Szekanecz M.D., Ph.D., D.Sc.

4. Title: Osteoporosis in systemic sclerosis
5. Title: Quality of life in systemic sclerosis
   Tutor: Szilvia Szamosi M.D., Ph.D.

6. Title: Diagnosis and therapy of early arthritis
7. Title: Modern therapy of vasculitides
   Tutor: Edit Végh M.D.

8. Title: Extra-articular manifestations in ankylosing spondylitis
   Tutor: Nóra Bodnár M.D.

9. Title: Extra-articular manifestations of ankylosing spondylitis
10. Title: Modern treatment of spondyloarthritides
    Tutor: Sándor Szántó M.D., Ph.D.

11. Title: Therapeutic opportunities in ankylosing spondylitis
    Tutor: Katalin Gulyás M.D.

12. Title: Therapeutic opportunities in psoriatic arthritis
    Tutor: Zsófia Pethő M.D.

Department of Neurology

1. Title: Cerebral hemodynamics and cognitive dysfunction in treated and non-treated stroke patients
2. Title: Neurosonological investigations in acute and chronic stroke patients
3. Title: Non-invasive investigation of endothelial dysfunction.
   Tutor: László Csiba M.D., Ph.D., D.Sc., M.H.A.Sc.

4. Title: Comorbidity in Multiple sclerosis
   Tutor: Tünde Csépány M.D., Ph.D.

5. Title: Effect collateral circulation from the external carotid artery in patients with unilateral internal carotid artery occlusion.

6. Title: Effect of actual blood pressure on the cerebrovascular reactivity.
   Tutor: László Oláh M.D., Ph.D.

Department of Neurosurgery

1. Title: Do middle cerebral artery aneurysms exhibit right sided dominance?
2. Title: Treatment of multiple cerebral metastases: clinical results
   Tutor: Sándor Szabó M.D., Ph.D.

3. Title: Current treatment of intraventricular hemorrhage
4. Title: Spinal infections
5. Title: Surgical treatment of Chiari malformation
   Tutor: László Novák M.D., Ph.D. habil.

6. Title: Connection of proteoglycans and cell membrane receptors in the peritumoral extracellular matrix
   Tutor: Álmos Klekner M.D., Ph.D. habil.

7. Title: History of neurosurgical radiosurgery.
   Tutor: József Dobai M.D.

8. Title: Vertebroplasty.
   Tutor: Péter Ruszthi M.D.

Department of Obstetrics and Gynecology

1. Title: Clinical trials of new drugs for the treatment of osteoporosis
   Tutor: Ádám Balogh M.D., Ph.D., D.Sc.

2. Title: Diagnosis and Treatment of Endometrial Cancer
3. Title: Diagnosis and Treatment of Ovarian Cancer
4. Title: Diagnosis and Treatment of Vulvar Cancer
5. Title: Screening /Diagnosis and Treatment of Cervical Cancer
   Tutor: Zoltán Hernádi M.D., Ph.D., D.Sc.

6. Title: Labour induction
   Tutor: Tamás Major M.D., Ph.D.
7. Title: Non-invasive prenatal testing for chromosomal aneuploidies
   Tutor: Olga Török M.D., Ph.D. habil.

8. Title: Efficiency and safety of first line chemotherapy in ovarian cancer
9. Title: Efficiency and safety of second and subsequent line chemotherapy in ovarian cancer
10. Title: Efficiency of HPV vaccination
11. Title: Fetal assessment by biophysical profile
12. Title: Marker studies in ovarian cancer
13. Title: Molecular medicine and ovarian cancer
14. Title: Molecular medicine and prenatal diagnosis
15. Title: Neoadjuvant chemotherapy of cervical cancer
16. Title: Placental atherogenesis
17. Title: Surgical treatment of recurrent ovarian cancer
18. Title: Surgical treatment of vulval cancer
19. Title: The role of inherited and acquired thrombophilia in reproductive health
20. Title: The role of lymphadenectomy in the treatment of endometrial cancer
21. Title: The role of preoperative MRI in cervical cancer
22. Title: Trends in operative delivery
   Tutor: Róbert Póka M.D., Dr. habil., Ph.D.

23. Title: Acceptance of invasive prenatal diagnostic tests
24. Title: Meiotic abnormalities and their clinical significance in human reproduction
25. Title: Role of Doppler ultrasound in antenatal care
   Tutor: Tamás Szilveszter Kovács M.D., Ph.D.

26. Title: Anovulatory infertility
27. Title: Examination of genetic concerns about the safety of assisted reproduction
28. Title: Role of antimullerian hormone (AMH) in clinical practice
29. Title: Ultrasound dating in pregnancy
   Tutor: Attila Jakab M.D., Ph.D. habil.

30. Title: Vaginal Birth After Cesarean
    Tutor: Alpár Gábor Juhász M.D., Ph.D.

31. Title: Cervical cancer prevention: the role and the future of HPV vaccination besides conventional screening
32. Title: New treatment strategies in ovarian cancer
   Tutor: Zoárd Krasznai M.D., Ph.D.

33. Title: Role of endoscopy in infertility work-up
   Tutor: Péter Török M.D., Ph.D.

34. Title: Pregnancy care in PCOS patients
35. Title: Special aspects of pregnancy care in patients with endocrine disorders
36. Title: Thyroid autoimmunity - clinical significance, prevention and treatment in human reproduction
   Tutor: Tamás Deli M.D., Ph.D.

37. Title: Transvaginal hydrolaparoscopy - a new method
38. Title: Hysteroscopic treatment of different gynecologic pathologies
39. Title: White blood cell function in preeclampsia
   Tutor: Rudolf Lampé M.D., Ph.D.

40. Title: Contraception in the 21st century
    Tutor: Balázs Erdődi M.D.

**Division of Gynecological Oncology**

1. Title: Chemotherapy of ovarian cancer
2. Title: Prognostic relevance of HPV-infection in cervical cancer
3. Title: Surgical treatment of HPV-infection
4. Title: The prognostic role of CA-125 in ovarian cancer
   Tutor: Zoltán Hernádi M.D., Ph.D., D.Sc.

5. Title: Chemotherapy of cervical cancer
6. Title: Epidemiology and therapy of vulvar cancer
7. Title: Epidemiology of metastatic ovarian cancer
8. Title: Follow-up of endometrial cancer patients, analysis of prognostic factors
9. Title: Prothrombotic states in gynaecologic cancer
10. Title: Superoxid anion production of granulocytes in gynecologic cancer
   Tutor: Róbert Póka M.D., Dr. habil., Ph.D.

11. Title: Prognostic factors and treatment of cervical cancer
12. Title: The role of CA125 and HE4 in the follow-up of ovarian cancer
   Tutor: Zoárd Krasznai M.D., Ph.D.

**Department of Ophthalmology**
1. Title: Lamellar and penetrating keratoplasty techniques
2. Title: Surgical treatment of dry eye
   Tutor: László Módis M.D., Ph.D., D.Sc.

3. Title: Intraocular tumors
   Tutor: Judit Damjanovich M.D., Ph.D.

4. Title: Ocular clinical signs in rare diseases
   Tutor: Valéria Nagy M.D., Ph.D.

5. Title: Corneal dystrophies
6. Title: Stem cells of the cornea
   Tutor: Lili Takács M.D., Ph.D.

7. Title: Nuclear medicine measurements in the inflammatory disorders of the eye’s anterior segment
8. Title: Prospective study of vascular pathogenesis of eye diseases associated to rheumatologic and immunologic disorders
9. Title: Tear cytokine measurements in inflammatory diseases of the anterior segment of the eye associated to immunological and autoimnunological disorders
10. Title: Tear-clearance measurements in dry eye syndrome with dacryoscntigraphy
    Tutor: Adám Kemény-Beke M.D., Ph.D.

11. Title: Contact lens wear and complications
12. Title: Cosmetical contact lenses
    Tutor: Beáta Kettesy M.D., Ph.D.

13. Title: Importance of screening in diabetic retinopathy
14. Title: Morphologic changes in glaucoma
    Tutor: Adrienne Csutak M.D., Ph.D.

15. Title: Corneal measurements with Pentacam
16. Title: Refractive laser-surgical interventions
    Tutor: Bence Lajos Kolozsvári M.D., Ph.D.

17. Title: Examination of peptide receptors in human uveal melanoma
18. Title: Results of orbital decompression surgeries
19. Title: VEGF level in tears after PKP
    Tutor: Zita Steiber M.D., Ph.D.

20. Title: Color Doppler in the follow-up of choroidal melanoma after brachytherapy
21. Title: Subtenon TCA in the treatment of radiogen retinopathy
    Tutor: Éva Surányi M.D.

22. Title: Molecular genetic analysis of ocular fundus disorders
23. Title: Novel methods for periostal fixation in ophthalmic plastic surgery
    Tutor: Gergely Losonczy M.D., Ph.D.

24. Title: Graves' orbitopathy - current concepts in diagnosis and therapy
25. Title: Pathogenesis of Graves' orbitopathy
    Tutor: Bernadett Ujhelyi M.D., Ph.D.

26. Title: Assessing the safety and efficacy of intravitreal ranibizumab as a preoperative adjunct treatment before vitrectomy surgery in severe proliferative diabetic retinopathy (PDR) compared to standard vitrectomy alone
27. Title: Evaluate and demonstrate the results of the Hungarian Lucentis National Patient Registry
    Tutor: Attila Vajas M.D.

28. Title: Congenital ptosis peculiar associated movements of the affected lid
29. Title: Diagnosis and therapy in retinopathy of prematurity
30. Title: Non - surgical and surgical therapy of congenital ptosis
    Tutor: Annamária Nagy M.D.
31. Title: Ocular manifestations of Weill-Marchesani syndrome
32. Title: Pellucid marginal degeneration
    Tutor: Mariann Fodor M.D., Ph.D.
33. Title: BCVA change after intravitreal ranibizumab injection
34. Title: IOP change after intravitreal ranibizumab injection
Tutor: Erika Papp M.D.

Department of Orthopedic Surgery
1. Title: The role of arthrodesis in the treatment of degenerative arthritis of the knee.
2. Title: Treatment options in knee instability.
Tutor: Henrik Rybaltovszki M.D.

Department of Pediatrics
1. Title: Contemporary evaluation and treatment of medulloblastoma
2. Title: Thalassemia minor in North-East Hungary
Tutor: Csongor Kiss M.D., Ph.D., D.Sc.
3. Title: ECG screening in children and adolescents. A review.
Tutor: Gábor Mogyorósy M.D., Ph.D.
4. Title: Hydrocephaly of infants
Tutor: Andrea Nagy M.D.
5. Title: IgA nephropathy in childhood
Tutor: Tamás Szabó M.D., Ph.D.
6. Title: Fungal infections in malignant hematopathy
Tutor: István Szegedi M.D., Ph.D.
7. Title: Experience with tissue adhesives in lip cleft surgery
Tutor: Ágnes Magyar M.D.
8. Title: Aldosteron producing suprarenal tumors in children
9. Title: Efficiency of Nordic Walking therapy in case of obese children regarding motivation for slimming
10. Title: Physiotherapy of diabetic children - prevention of hypoglycemia
Tutor: Enikő Felszeghy M.D., Ph.D.

Department of Physical Medicine and Rehabilitation
1. Title: The importance of multidisciplinary rehabilitation to improve functional capacity, quality of life, cardiovascular function and metabolic parameters of obese patients, those suffering from osteoarthritis.
2. Title: The significance of conductive rehabilitation activities in gait development (gait analysis test)
3. Title: The significance of the (upper extremity) functional capacity of patients with cerebrovascular diseases in the effectiveness of rehabilitation
Tutor: Zoltán Jenei M.D., Ph.D.
4. Title: Assessment of quality of life of people with disabilities or with the risk of disability
5. Title: Goal Attainment Scaling in rehabilitation medicine
6. Title: Treatment of spasticity in children with cerebral palsy
Tutor: Zsuzsanna Vekerdy-Nagy M.D., Ph.D. habil.

Department of Psychiatry
1. Title: The dietetic and gastroinvestinal basis of autism
Tutor: Csaba Móré E. M.D., Ph.D.
2. Title: Effectiveness of schema therapy in personality disorders
3. Title: Emotion dependent and independent cognitive functions in unipolar depression
4. Title: Significance of disfunctional attitudes in depression and anxiety disorders
5. Title: Theory of mind and mentalization deficits in patients with personality disorders
Tutor: Anikó Égerházi M.D., Ph.D.
Tutor: Katalin Tolvay M.D.
7. Title: Brain imaging in psychiatry.
8. Title: Oxidativ stress and chronic inflammation in psychiatric disorders
10. Title: The neurobiology of depression.
11. Title: The role of mikrobiota in mental health
12. Title: The therapeutic potentials of psychodelics
Tutor: Ede Frecska M.D., M.A., Ph.D.

Department of Pulmonology
Tutor: Andrea Fodor M.D.

2. Title: New perspectives in the treatment of community acquired pneumonia
Tutor: László Brugós M.D., Ph.D.

3. Title: The role of extracellular matrix in growing propagation and metastatization of lung cancer
Tutor: Imre Varga M.D., Ph.D.

4. Title: Modern Therapy of NSCLC
Tutor: Tamás Kardos M.D.

Department of Surgery
1. Title: Surgical treatment of Graves disease with ophthalmopathy
Tutor: Ferenc Győry M.D., Ph.D.

2. Title: Surgical treatment of bowel obstruction in colorectal diseases
Tutor: László Damjanovich M.D., Ph.D.

3. Title: Surgical and endovascular interventions in critical limb ischemia
Tutor: Sándor Olvasztó M.D.

4. Title: Histopathologic examination of the carotid plaques regarding their possible prognostic value
Tutor: Krisztina Litauszky M.D.

5. Title: Liver resections for metastases of colorectal cancer
Tutor: János Pósán M.D.

6. Title: Prevention of bronchial stump insufficiency after lung resections
Tutor: István Takács M.D., Ph.D.

7. Title: The surgical treatment of hyperparathyroidism
Tutor: Roland Fedor M.D., Ph.D.

8. Title: Different forms of hereditary colorectal cancer among our patients.
Tutor: Miklós Tanyi M.D., Ph.D.

9. Title: Mesh implantation in the surgical treatment of thoracic defects
Tutor: Attila Enyedi M.D.

Division of Operative Techniques and Surgical Research
1. Title: Anesthesia in experimental animals (for Medicine and Pharmacy students)

2. Title: Experimental animal models for diabetes in pharmaceutical research (for Pharmacy students)

3. Title: Laser-Doppler in experimental surgery (for Medicine students)
Tutor: Ádám Deák D.V.M., Ph.D.

4. Title: New technical possibilities in surgery (for Medicine students)
Tutor: Andrea Furka M.D., Ph.D.

5. Title: Basic Microsurgical Training course at the Microsurgical Education and Training Center of the Department of Operative Techniques and Surgical Research

6. Title: Famous surgeons and famous discoveries (for Medicine students)
Tutor: Irén Mikó M.D., Ph.D., C.Sc.

7. Title: Changes of red blood cell mechanical stability in surgical pathophysiological processes (for Medicine and Dentistry students)

8. Title: Investigation of hemorheological and microcircular changes in ischemia-reperfusion, including therapeutical possibilities (for Medicine students)
Tutor: Norbert Németh M.D., MBA, Ph.D.

9. Title: Hemostatic agents (bioplasts) in surgery (for Pharmacy students)
10. Title: Ischemia-reperfusion injury and its prevention with different methods - experimental models (for Medicine students)
   Tutor: Katalin Pető M.D., Ph.D.

11. Title: Instruments and devices used in pharmacological care (for Pharmacy students)
    Tutor: Tamás Lesznyák M.D., D.Pharm.

12. Title: Chapters from the history of surgical asepsis, antisepsis (for Medicine and Dentistry students)
    Tutor: Irén Mikó M.D., Ph.D.

13. Title: Technical development of laparoscopic surgery
    Tutor: Zsuzsanna Sarolta Magyar M.D.

**Department of Urology**

1. Title: Role of laparoscopy in urology
   Tutor: Tibor Flaskó M.D., Ph.D.

2. Title: Assessment of urinary incontinence
   Tutor: László Lőrincz M.D.

3. Title: Different topics regarding prostate and kidney cancer
   Tutor: Csaba Berczi M.D., Ph.D.

4. Title: Bladder replacement after radical cystectomy
   Tutor: Antal Farkas M.D., Ph.D.

5. Title: Different topics regarding andrology
   Tutor: Mátyás Benyó M.D., Ph.D.

6. Title: Pathology of clear cell renal cancer
   Tutor: Krisztián Szegedi M.D.

7. Title: Treatment of urethral stricture
   Tutor: Mihály Murányi M.D.

8. Title: Assessment of chronic LUTS
   Tutor: Sándor Árpád Tóth M.D.

9. Title: Assessment of ejaculatory disturbances
    Tutor: József Zoltán Kiss M.D.

10. Title: Effect of orchidopexy on male fertility
    Tutor: Gyula Drabik M.D.

**Department of Pharmacology**

1. Title: Antibiotics and their application
2. Title: Antitumor agents and applications
3. Title: Asthma and antiasthmatic agents
4. Title: Degenerative disorders and treatments in the central nervous system
5. Title: Hypercholesterolemia and pharmacotherapy
6. Title: Hypertension and treatments
7. Title: Inflammation and nonsteroid and steroid antiinflammatory drugs
8. Title: Optional title in cardiovascular pharmacology.
9. Title: Sleep disorders, sedation and treatments
10. Title: The blood and its pharmacological interventions

11. Title: Free topic from instrumental analytical chemistry.
12. Title: Gaseous „messengers” (NO, CO, H2S, CH4) in the treatment of ischemic heart diseases.
13. Title: Model systems used in drug metabolism studies.
14. Title: Sampling and sample preparation used in the analysis of drug substances.
15. Title: Treatment of heart failure.
16. Title: Treatment of ischemic heart diseases.
    Tutor: István Bak M.Sc., Ph.D. habil.

17. Title: Diuretics and their application
18. Title: Hemeoxygenase/CO system and autophagy (experimental)
19. Title: Pharmacotherapy in pregnancy
20. Title: Pharmacotherapy in childhood
21. Title: Pharmacotherapy in elderly patient
    Tutor: István Lekli D.Pharm., Ph.D.
22. Title: Pharmacological characterization of potentially vasoactive compounds
23. Title: The role of capsaicin in the ischemic heart disease
24. Title: The role of Claudin-12 protein in the myocardium
25. Title: The role of selenium in heart diseases
    Tutor: Attila Czompa D.Pharm., Ph.D.
CHAPTER 22

Department of Pharmaceutical Technology
1. Title: Nanoparticles and their potential for application in bone.
2. Title: The connection between the regulation of the endocrine and the immune system.
   Tutor: Miklós Vecsernyés D.Pharm., Ph.D.
3. Title: Biocosmetics.
4. Title: Pharmaceutical care. Selected chapters from pharmaceutical care, creating and evaluate questionnaires.
5. Title: Pharmaceutical Communication Skills. Description of problems.
6. Title: Pharmaceutical technology. Modified-Release Therapeutic systems.
   Tutor: Ildikó Bácskay D.Pharm., Ph.D.
7. Title: Examination of the antioxidant effect of (natural) substrates on HaCaT keratinocyte cell line.
8. Title: Formulation of creams and topical SMEDDS (self-microemulsifying drug delivery systems).
   Tutor: Pálma Fehér D.Pharm.
9. Title: Examination of natural substrates. Examination of biological effect on cell cultures and biological barriers especially polyphenols.
10. Title: Formulation of natural substrates in new and innovative pharmaceutical dosage forms. Stability problems. (liposomes, chewable tablets, microcapsules)
    Tutor: Judit Váradi D.Pharm., Ph.D.
11. Title: Drug absorption: problems, improvement and models.
12. Title: Modified-release solid dosage forms.
    Tutor: Ferenc Fenyvesi D.Pharm., Ph.D.
13. Title: Formulation and pharmaceutical technology characterization of therapeutic systems.
    Tutor: Zoltán Ujhelyi D.Pharm., Ph.D.

Department of Pharmaceutical Chemistry
1. Title: Synthesis of new teicoplanin aglycon derivatives
   Tutor: Pál Herczegh Ph.D., D.Sc.
2. Title: Bisphosphonate drugs (literature compilation)
3. Title: Newly approved antibiotics (literature compilation)
4. Title: Synthesis of glycopeptide antibiotic derivatives
5. Title: The history of ristocetin and ristocetin aglycon (literature compilation)
   Tutor: Ilona Bakai-Bereczki Ph.D.
6. Title: Oral anticoagulants (literature compilation)
7. Title: Sulfated oligosaccharides as inhibitors of angiogenesis, tumor growth, and metastasis saccharides (literature compilation)
8. Title: Synthesis of thio-linked glycomimetics by photoinduced hydrothiolation of glycals
    Tutor: Anikó Borbás Ph.D., D.Sc.
9. Title: Application of thiol-addition in the synthesis of glycoconjugates
10. Title: Synthesis of chimera-type antibiotics
11. Title: Synthesis of potential ligands of bactericidal lectines
    Tutor: Magdolna Csávás Ph.D.
12. Title: Efficient synthesis of idose/iduronic acid monosaccharide building blocks
13. Title: Synthesis and biological study of sulfonic-acid containing maltoligomers
14. Title: Synthesis and characterisation of carbohydrate based nitrogen containing tricycles
15. Title: Synthesis of heparin analogue anticoagulant oligosaccharides
16. Title: Synthesis of multivalent dirhamnoside derivatives
    Tutor: Mihály Herczeg Ph.D.

Department of Pharmaceutical Surveillance and Economics
1. Title: Interactions in the practice of Pharmacovigilance by the aspects of a patient
2. Title: The practice of pharmacovigilance by
3. Title: Theory and practice of risk evaluation and risk management
   Tutor: Béla Tóth E. M.D., Ph.D.

**Department of Biopharmacy**

1. Title: Any subject from the field of biopharmacy
   Tutor: Gábor Halmos D.Pharm., Ph.D.
CHAPTER 23
WRITING AND DEFENDING A THESIS

(1) The thesis topics, and names of the supervising teachers are available in the faculty bulletin, in the program description and on the website of the faculty.

(2) The Educational Units [departments] put together the list of theses to be announced (with the names of the consultants), which is included in the program description. The student is to choose from this list, and any deviation from it, has to be approved by the heads of the aforementioned Educational Units. The student is required to choose the topic of his/her thesis before the last week of the second semester in the fourth academic year. In case the student intends to choose an experimental topic, he/she is expected to declare it before the last week of the first semester of the fourth academic year. The titles of the thesis must be submitted to the Dean’s Office in the last week of the first or second semester of the fourth academic year.

(3) The thesis can be done as part of research under the auspices of the Students' Scientific Association (SSA). An essay can be accepted as a thesis, on condition it has been acknowledged by the panel of judges of the local SSA conference as a thesis and thereby the specific essay was graded ‘excellent’; in case of an essay with multiple authors it can be accepted as a thesis in its original form if the declaration of waiver by the other authors is attached. The documents regarding the acceptance of the thesis (evaluations, answers) must be submitted in an attachment. It is also necessary to fill in and submit a questionnaire containing details (title, authors, departments, supervisors) of the essay and SSA presentation.

(4) The deadline to submit the thesis at the Faculty of Pharmacy is three months before the written final exam. In case the student fails to do this by the deadline, he/she can take his/her comprehensive exams, but cannot take the state exam. The deadline to submit the thesis can be postponed up to two weeks in specific cases, with the supervisor’s suggestion and with the permission from the head of the Education Committee.

(5) The thesis must be submitted in two copies at the Education Office and electronically uploaded to the electronic archive of the University and National Library of the University of Debrecen before the beginning of the written final exam. It should not exceed 40 typed pages in length. The typed or word processed and printed thesis must be submitted bound and in an aesthetic design. Margins must be 2.5 cm at the top and bottom, and 3 cm on the left and right. Its structure and the process of evaluation must meet requirements as follows:

a) The thesis can outline the author’s own experimental activities; it can be a case study, a clinicopathological or statistical analysis or even a summary of scientific literature. It should not necessarily contain new scientific results but is should definitely sum up the author’s individual work in a specific field. Results other than the author’s own should be specified exactly. The front page should contain information as follows: the title of the thesis, author’s name, supervisor’s name, name of the educational unit in which the thesis was written, name of the head of department and date of accomplishment. The thesis can be submitted in the possession of signatures from the supervisor and head of department. (Specimen documents/forms can be downloaded from the homepage of the Faculty). Introduction, aims, results and discussion should be arranged in separate chapters. Furthermore, the thesis should also contain a summary (of maximum two printed pages). Bibliographic information should be organized as follows: authors’ names (first names by initials), full title of publication, name of journal where it appeared, number of volume, page(s) and year of publication. In case a book is referred to, the name(s) of the book’s author(s) and of the publisher should both be provided. The number of references should fall in the range of 20-50 publications.

b) On evaluating a thesis, referees will consider its logical organization and professional relevance,
the methods applied and the accuracy through which results have been presented.
c) The supervisor of the thesis will evaluate the author’s professional activities and, together with
the thesis, submit the written evaluation in two copies to the Education Office and the person(s) in
charge at the specific department. (Specimen documents/forms can be downloaded from the
homepage of the Faculty).
d) The submitted thesis will be allocated to two referees at the official request of a professional
board appointed by the Educational Committee of the Faculty. In case a referee fails to fulfil his
commitment, he should return the thesis to the Education Office without delay. Referees should
prepare and send two printed copies of their written evaluation to the Education Office, while the
electronic version should be sent to both the Education Office and student (author) within two
weeks of submission. If neither referee accepts the thesis, the student has to re-write it with due
consideration of the critical remarks made by the referees. If only one of the two referees accepts
the thesis, it should be allocated to a third judge whose opinion will be exclusively considered in the
future. A candidate can orally defend his/her thesis if both referees have accepted it.
Students will get a written evaluation from the referees and they must respond – even if they agree
with the remarks – in both written and electronical form within one week of receipt and send their
(written) response to both the Education Office and referees. Referees should electronically declare
their acceptance of the student’s response within five days.
The thesis must be defended in the educational unit in which the topic was announced, in front of
thesis defense committees appointed by the Dean’s Office. The defense itself will take place in front
of a committee including three members. The chairperson of the defense committee should be a
head tutor of the faculty, while the members are selected as follows: one of the certified tutors of
the faculty and a person keeping the minutes, the head of the education unit or a head tutor
(chairperson) appointed by him/her, and the referees. The supervisor and the referees must be
invited to participate at the event of defense. The committee evaluates the thesis in a closed session.
A thesis defense report is made in three copies containing the student’s name, the title of the thesis,
date and place of defense and the mark/grade approved by the committee. One of the copies belongs
to the educational unit of the faculty, the other two are sent to the Education Office by the institute.
One copy of the thesis shall be kept in the educational unit of the faculty for five years, one copy is
returned to the student and one copy is sent to the Kenézy Library where it can be read but not
borrowed.
The following should be attached to the thesis:
- the supervisor’s report which is the written evaluation of the candidate
- a summary of the thesis with name and title
- plagiarism declaration form in which the student declares that the thesis is his/her own work
- a request for limited access to thesis form - if needed

The final exam (test) consists of a practical and oral part.
The chair and the members of the committee are appointed by the Dean or the Vice Dean.
The date of the written state exam is appointed by the Ministry of Education.
The dates of the practical and oral state exams are assigned by the Dean’s Office. The exam is
conducted in front of a state examining committee of three to five people. The examination
committee at the practical final exam at the Faculty of Pharmacy consists of two tutors of the
university appointed by the Dean’s Office. The examination board at the theoretical exam is
presided by a recognized scientist in the field of pharmacy, while the members are two head tutors
of the Faculty and a person keeping the minutes. The Dean’s Office can appoint more than one
examination board to conduct simultaneous theoretical exams.
## LIST OF TEXTBOOKS

### BMC

**Introduction to Biophysics I.**
Serway/Vuille: College Physics.  

**Introduction to Medical Chemistry I.**

**Introduction to Medical Chemistry II.**

**Introduction to Biology I.**

**Hungarian Language for BMC students:**

**Introduction to Biology II.**

**Introduction to Biophysics II.:**
Serway/Vuille: College Physics.  

### SBMC

**Introduction to Biophysics:**
Serway/Vuille: College Physics.  

**Introduction to Medical Chemistry:**

**Introduction to Biology:**

**1st year Hungarian Crash Course:**

**Mathematics:**

**General Chemistry Theory:**
J. McMurry, R. C. Fay: General Chemistry.  
**General Chemistry Practice:**

**Pharmaceutical Biology I.:**

**Latin Language I.:**

**Computer Science:**

**Hungarian Language I/1.:**

**Latin Language II.:**
Takácsné Tóth Emőke: Latin for Pharmacy Students II. Debrecen. 2012.

**Inorganic and Qualitative Analytical Chemistry Theory:**

**Biophysics:**
Materials.
URL: www.biophys.dote.hu
Textbook online.
URL:
Physical Chemistry I.:  
Peter Atkins and Julio de Paula: Physical chemistry for life sciences.  
R. Chang: Physical chemistry with applications to biological systems.  
P. W. Atkins, J. de Paula: Elements of Physical Chemistry.  

Organic Chemistry Theory I.:  
E. L. Eliel, S. H. Wilen: Stereochemistry of organic compounds.  
J.A. Miller, E.F. Neuzil: Modern Experimental Organic Chemistry.  

First Aid and Reanimation:  
József Betlehem: First Things to Be Done in Emergencies – Providing First Aid for Health Professionals.  
Medicina Könyvkiadó Zrt., 2012.

Pharmaceutical Biology II.:  

Practical Courses in Genetics.  
University Medical School of Debrecen, 2002.  
Tom Strachan, Andrew P. Read: Human Molecular Genetics.  

Hungarian Language I/2.:  
2013.

Pharmaceutical Anatomy:  
T. W. Sadler: Langman's Medical Embriology.  
L.P. Gartner: Concise Histology.  

2nd year  
Hungarian Language II/1.:  
Fodor Marianna - Rozman Katalin: Beszélek magyarul?! I..  

Organic Chemistry Theory II.:
LIST OF TEXTBOOKS

T. Eicher, S. Hauptmann.: Chemistry of heterocycles: Structures, reactions, synthesis and applications.

E. L. Eliel, S. H. Wilen: Stereochemistry of organic compounds.

J.A. Miller, E.F. Neuzil: Modern Experimental Organic Chemistry.

Quantitative Analytical Chemistry

Theory I.:

Harris, D. C.: Quantitative Chemical Analysis.

Human Physiology I.:
A. Fonyó: Principles of Medical Physiology.

Pharmaceutical Biochemistry I.:

Physical Chemistry II.:
Katalin Ösz, Attila Bényei: Physical Chemistry Laboratory Measurements (for students of Pharmacy, Chemistry and Chemical Engineering).
Egyetemi Kiadó, 2011.
Peter Atkins and Julio de Paula: Elements of Physical Chemistry.

Dr. Katalin Ösz, Dr. Attila Bényei: Physical Chemistry (practice information).
URL: http://fizkem.unideb.hu/physchem.html

Colloid and Surface Chemistry Theory:
Pasheley, RM, Karaman, ME: Applied and Surface Chemistry.
.
Barnes, GT, Gentle, IR: Interfacial science.
.
Cosgrove T.: Colloid Science.

Colloid and Surface Chemistry Practice:
Pasheley, RM, Karaman, ME: Applied and Surface Chemistry.
.
Barnes, GT, Gentle, IR: Interfacial science.
.
Cosgrove T.: Colloid Science.

Hungarian Language II/2.:
Fodor Marianna-Rozman Katalin: Beszélek magyarul?! II.

Human Physiology II.:  
A. Fonyó: Principles of Medical Physiology.  

Pharmaceutical Biochemistry II.:  
Thomas M. Devlin: Textbook of Biochemistry with Clinical Correlations.  

Pharmaceutical Technology Theory I.:  
M.E. Aulton: Pharmaceutics: The science of dosage form design.  
2002.  
European Pharmacopoeia.  
Pharmacopoea Hungarica Editio VIII..  
Formulae Normales.  

Pharmaceutical Technology Practice I.  
(Prescription Writing I.):  
Miklós Vecsernyés Ph.D., D.Pharm, Ildikó Bácskay Ph.D., D.Pharm: „Practicals in Pharmaceutical Technology - Prescription Pharmacy”.  
URL:  

Pharmacognosy Theory I.:  
William C Evans: Pharmacognosy.  
J. Bruneton: Pharmacognosy, Phytochemistry, Medicinal Plants.  

Pharmacognosy Practice I.:  
William C Evans: Pharmacognosy.  
J. Bruneton: Pharmacognosy, Phytochemistry, Medicinal Plants.  

Latin Medical Terminology I.:  
Répás László, 2016.

Modern biophysical methods in biology and medicine:  

3rd year  
Pharmaceutical Technology Theory II.:  
M.E. Aulton: Pharmaceutics: The science of dosage form design.  
2002.

Clinical Biochemistry I.:  

Pharmacognosy Theory II.:  
J. Bruneton: Pharmacognosy, Phytochemistry, Medicinal Plants.  
William C Evans: Pharmacognosy.
LIST OF TEXTBOOKS

J. Bruneton: Pharmacognosy, Phytochemistry, Medicinal Plants.
European Pharmacopoeia.

Medical Hungarian I.: Krasznai, Mónika: Bevezetés a gyógyszerész szaknyelvbe.
2010.

L.P. Gartner: Concise Histology.

2002.

János Kappelmayer and László Muszbek: Practicals in laboratory medicine.

CHAPTER 24

3481-9.

**Immunology:**
Abbas, A. K., Lichtman, A. H., Pillai, S.: Basic Immunology.
Gogolák P., Koncz G.: Short textbook of Basic Immunology.

**Medical Hungarian II.:**
Krasznai, Mónika: Bevezetés a gyógyszerész szaknyelvbe.
2010.

**Functional Anatomy of the Visual System:**
Eric R. Kandel, MD (winner of the Nobel Prize in 2000); James H. Schwartz, MD, PhD; Thomas M. Jessell, PhD; Steven A. Siegelbaum, PhD; and A. J. Hudspeth, PhD: Principles of Neural Science.
Gordon M. Shepherd: The Synaptic Organization of the Brain.

**Selected Problems of the Neural Control: Modelling of Single Neurons and Neural Networks:**
Christof Koch and Idan Segev: Methods in Neuronal Modeling, From Synapses to Networks.

**Latin Medical Terminology I.:**
Répás László: Basics of Medical Terminology, Latin and Greek Origins I.
Répás László, 2016.

**4th year**

**Pharmaceutical Technology Theory IV.:**
M.E. Aulton: Pharmaceutics: The science of dosage form design.
2002.

**Pharmacology Theory I.:**
Laurence L. Brunton (editor): Goodman & Gilman's The pharmacological Basis of Therapeutics.
Árpád Tösaki Ph.D., D.Sc., D.Pharm: Pharmacology and therapy.
URL: http://gyogyszertankonyv.med.unideb.hu/files/Pharmacology_and_therapy.pdf

**Medical Microbiology I.:**
Levinson, W.: Review of Medical Microbiology and Immunology.
Lajos Gergely: Diagnostic Medical Microbiology, Laboratory Exercises. 1989.

**Pharmaceutical and Bioanalytical Chemistry I.:**
Kellner, Robert A.: Analytical Chemistry.
Pataki L.: Basic analytical chemistry.
Akadémiai Kiadó, 1980.
István Bak M.Sc., Ph.D.: Modern analytical techniques in the pharmaceutical- and bioanalysis.
URL:
http://gyogyszertankonyv.med.unideb.hu/files/analytical_techniques.pdf
Susan R. Mikkelsen, Eduardo Corton: Bioanalytical Chemistry.

**Pharmacology Practice I.:**
Laurence L. Brunton (editor): Goodman & Gilman's The pharmacological Basis of Therapeutics.
LIST OF TEXTBOOKS

Árpád Tósaki Ph.D., D.Sc., D.Pharm: Pharmacology and therapy.
URL: http://gyogyszertankonyv.med.unideb.hu/files/Pharmacology_and_therapy.pdf

Preventive Medicine and Public Health:

Pharmacology Theory II.:
Laurence L. Brunton (editor): Goodman & Gilman's The pharmacological Basis of Therapeutics.
Árpád Tósaki Ph.D., D.Sc., D.Pharm: Pharmacology and therapy.
URL: http://gyogyszertankonyv.med.unideb.hu/files/Pharmacology_and_therapy.pdf

Medical Microbiology II.:
Levinson, W.: Review of Medical Microbiology and Immunology.
Lajos Gergely: Diagnostic Medical Microbiology, Laboratory Exercises.
1989.

Bioethics:
Glannon, W.: Biomedical Ethics.
Leonard J. Weber: Profits Before People?: Ethical Standards And the Marketing of Prescription Drugs.

Walter Glannon: Bioethics and the Brain.
Francis Fukuyama: Our Posthuman Future: Consequences of the Biotechnology Revolution.
David B. Resnik: The Ethics of Science: An Introduction.
Routledge, 2005.

Basic Knowledge of Surgical Biomaterials for Students of Pharmacy:
Mikó I., Furka I.: Basic Surgical Techniques, Faculty of Medicine.

Pharmaceutical and Bioanalytical Chemistry II.:
Susan R. Mikkelsen, Eduardo Corton: Bioanalytical Chemistry.
István Bak M.Sc., Ph.D.: Modern analytical techniques in the pharmaceutical- and bioanalysis.
URL: http://gyogyszertankonyv.med.unideb.hu/files/analytical_techniques.pdf
Istvan Bak, Istvan Lekli: Selected chapters from the pharmaceutical and bioanalysis.
URL: http://tamop411c13.unideb.hu/

Pharmacology Practice II.:
Laurence L. Brunton (editor): Goodman & Gilman's The pharmacological Basis of Therapeutics.
Árpád Tósaki Ph.D., D.Sc., D.Pharm: Pharmacology and therapy.

Functional Anatomy of the Visual
CHAPTER 24

**System:**
Eric R. Kandel, MD (winner of the Nobel Prize in 2000); James H. Schwartz, MD, PhD; Thomas M. Jessell, PhD; Steven A. Siegelbaum, PhD; and A. J. Hudspeth, PhD: Principles of Neural Science.
Gordon M. Shepherd: The Synaptic Organization of the Brain.

**Selected Problems of the Neural Control:**
Modelling of Single Neurons and Neural Networks:
Christof Koch and Idan Segev: Methods in Neuronal Modeling, From Synapses to Networks.

**Polymorphism of Pharmaceuticals:**
Dr. Attila Bényei: Polymorphism of pharmaceuticals.

**Quality Control:**

**Biopharmacy:**
Leon, Shargel; Andrew, Yu: Applied Biopharmaceutics & Pharmacokinetics.
Gabor Halmos, Pharm.D., Ph.D. Professor and Chair Department of Biopharmacy: Selected chapters of Biopharmacy.
URL: http://gyogyszertankonyv.med.unideb.hu/files/BIOPHARMACY.pdf

**Radiopharmacy Theory:**
Univ. notebook, 1997.

**Radiopharmacy Practice:**
Univ. notebook, 1997.
